L E T T E R XXII.

To the MARQUIS de l'ESTRADE.

*The Author returns to France. Dangers he runs at the Cape of Florida. Origin of a pretended Fountain, which has the Quality of making young again. The Ship on which he was on board, escapes from the English: Fight with one of their Privateers; the Ship is in Danger of being burnt; project of making a Descent upon the Coasts of New England; taking of an English Vessel. The Author arrives at Corunna.*

S I R,

*W* H E N I arrived at Corunna the first of November 1762, I heard that M. de Kerlerec had sent a Spanish vessel to France, in order to prejudice the Premier against M. de Rochemore, commissary

VOL. II.

B

g<sup>e</sup>neral

general of the marine, and *Ordonnateur* † of Louisiana, who was recalled to *France* by the king's *lettre de Cachet*, and against the officers who accompanied him, amongst whom I was, without knowing of it. Already in the preceding month of June, that governor of *Louisiana*, notified to M. *de Belle-Isle*, whose history I have related to you, and to M. *le Chevalier d'Erneville*, commander of the troops of the marine in *Louisiana*, the disagreeable news of their recall in these terms :

“ I give you this notice, that I have received  
 “ a letter from the *Duc de Choiseuil*, dated the  
 “ first of January last, which informs me, that  
 “ the king, displeas'd with your services, has  
 “ broke you, and deprived you of your places.”

You may guess how great the astonishment of these two officers was, who had served their king and country with so much honour and dignity. This catastrophe has affected M. *de Belle-Isle* more than his unhappy situation when he was among the cannibals. This worthy officer, who has done great services to the colony of *Louisiana* where he hoped to die in peace, has not hesitated, notwithstanding his advanced age, to expose himself to the dangers of the sea  
 and

---

\* Overseer of the customs and of the provisions in *Louisiana*.

and of war, and to embark with us, in order to lay his complaints before the sovereign. He arrived here very ill, and his misfortunes afflict him to such a degree, that I fear very much, he will not be able to come to the throne of the best of kings, but sink under this unexpected reverse of fortune, at the latter end of his life\*; you will perceive by the following account, that without the experience of this old officer, we should have perished, being one hundred and fifty of us in the ship *Medea* of twelve guns, commanded by Captain *Cochon*. The English fleet which had taken *Martinique*, was attacking the *Havannah* in *Cuba*. It is known, that in order to sail from *Louisiana* to *France*, the ship must get sight of that island.

This brings on a very natural reflection. Was it not just, that the governor of *Louisiana* should communicate to Captain *Cochon* those advices, which he had received, that he might not venture imprudently, as he afterwards did, to touch

B 2

at

---

\* *M. de Belle-Ile*, being overwhelmed with grief and fatigue died at *Paris*, the fourth of May 1763, regretted by many good men. His kindness gained him the esteem and friendship of every officer. He never discontinued the pious exercises in his family and gave the best example to the whole colony. His wife and daughter soon followed him to the grave.

at the *Havannah*? he ought to have paid a very serious attention to give such advices.

We sailed from *Balife* the tenth of August 1762; and as we intended to avoid *Cuba*, we went towards the isles of *Tortugas* or of *Turtles*\*, we had a fair wind which blew very hard; but our pilot being little acquainted with these shores, missed the entrance of the channel of *Bahama*, in the dusk, and sailed into the bay which the cape of *Florida* forms, having taken the height, and found the latitude the same on this side the cape as it ought to be on the other, he believed he had doubled it; and we should have been lost, if *M. de Belle-Isle*, who in forty-five years had acquired a perfect knowledge of the coasts of *North America*, and had some doubts about the pilot's abilities, had not watched to avoid the danger. In reality, this experienced major seeing in the morning that the colour of the water was changed, went to wake the captain, who thought he was in the open sea and slept with security. Having taken the soundings he found his mistake, and was much surpris'd to find only about five fathoms  
of

---

\* They have got this name, because the turtles hatch their eggs in the sands thereon; they are all very low, and not visible till you come very near them.

of water, we veered about and happily got clear of these shores by the help of frequent soundings.

Before I proceed, I must be allowed to make a digression upon *Florida*, and on that fountain which had the power of making old people young again, which has made so great a noise in *Europe*, and has occasioned almost as many voyages in order to obtain it, as the insatiable desire of riches. The Spaniards wished to get possession of it, as they had of the rich mines of *Peru*: I hope, that these details will not prove disagreeable to you, and that hope alone is sufficient to authorise the abstract I am going to present you with.

The Spaniards call the cape of *Florida Cabo de los Corrientes*, because the water has so strong a current there, as to resist the wind, and hinder the ships from advancing, though they should crowd all their sails; which occasions their being sometimes thrown against some rocks, which we were very near experiencing against some little isles which *Christopher Columbus* called *Los Martyres*, because, having perceived the tops of the rocks at a distance, he imagined he saw a likeness in them to men that were tortured. These isles are eleven in number. *Los Tortugas*, or the Turtles, were so called by the Spaniards, who caught six thousand tortoises upon these isles.

The *Bahama* islands are so low as to appear overflowed, by which means a great channel is formed with a current, which in the narrowest place is twenty leagues broad from *Albana* to *Los Martyres*, and fourteen from *Los Martyres* to *Florida*. All these isles are situated in twenty-five degrees fifteen minutes north latitude. We have cruized for twenty-seven days together in these parts, from whence we escaped by a kind of miracle.

It is known, that Don *Juan Ponce de Leon* discovered *Florida*, as he was in search of *Bimini*: this is the isle which has been so much talked of, containing the river *Jordan*, and the fountain so renowned by the Indians of *Cuba*, who asserted that its waters had the quality of making men young again. Don *Juan Ponce de Leon* believed this fable, and went in search of the fountain without finding it. He sent Captain *Perez de Ortubia* and the pilot *Antonio de Alminos* upon this discovery: he touched at the bay of *Puerto Rico*, where he found *Bimini*, but neither the river *Jordan* nor the fountain. Don *Juan* died some time after, unsuccessfully searching for this famous fountain.

The inhabitants of: *Cuba*, who were plagued by the *Spaniards* to discover the gold mines, being

ing desirous of getting rid of these importunate guests, told them, that besides the gold which they would find in the isle of *Bimini*, there was likewise a river and a fountain which made old men young by bathing in it. This account was immediately transmitted to the court of *Madrid*, where it engaged many *Spaniards* to embark at *Cadiz*, in order to go to the *West Indies* to see this wonder, which, if it had really existed, would have been worth more than all the gold in the world.

When these *Spaniards* returned to *Cadiz*, every one found that they had been deceived; instead of being young, they were grown older, and the people laughed at their long and troublesome voyage; but in seeking for this imaginary fountain, they discovered *Cape Corrientes*. At that time all those who came to the isle of *Bimini*, tried all the rivers, fountains, lakes, and even the marshes in it, bathed in them, and drank their waters, in order to try whether they would make them young again; this wonder has but lately been sought for as the philosopher's stone was in *Europe*.

We agreed amongst ourselves, that if we were taken by *English* privateers, and carried to this isle, we would bathe in all the rivers and foun-

tains of *Bimini*. This isle now belongs to the *English*, and is called the *Isle of Providence*; it formerly was a retreat for the pirates who have infested the American seas for a considerable time.

The first thing that gave rise to this fable about the fountain is this: the air of *Florida* is so temperate, that it is said there have been men of two hundred and fifty years of age. It is likewise asserted, that the handsomest women in *North America* lived at *Bimini*; and all the men of the continent, even the old ones, retired to that isle to soften the miseries of their life; but all these innocent pleasures ended at the arrival of the *Europeans*, who dispossessed these poor people. All the isles have been settled by people who came from *Cuba*. The accounts inform us of the brave resistance which the *Indians* of *Florida* made against the *Spaniards*; when the latter arrived in their country, they met them in eleven *canoes* or *piraguas* armed with bows and arrows; they were bold enough to come and cut the cables of *Don Juan Ponce de Leon's* vessel, who was forced to make peace with them: these people are governed by *Parautis* or *Caciques*.

I shall add here, being upon the article of this pretended fountain, that the *Indians* of *Darien*  
endea-

endeavouring, as those of *Cuba* had, to get rid of the *Spaniards*, on account of the inquiry they made after gold, persuaded them, by way of joke, that since they were so fond of this metal, they should go to the southward, where it was so common that they fished it with nets; *Vasco Nunez de Balboa* inserted this account in a memoir which he sent to court; this piece of news pleased the *Spaniards*; about this time *Nunez* discovered the South Sea and *Peru*; but the gold fishery proved abortive.

You know, that, in the time of the famous system of *John Law*, who was near overturning the whole kingdom, there was a representation at Paris of an Indian upon the river *Mississippi*, giving a *Frenchman* an ingot of gold for a knife, and every one had then the madness of bringing his real money, in order to have a share in the bonds of a pretended *Dorado*; it is certain that if some *Indians* of the neighbourhood of *New Orleans* had been at *Paris* at that time, they would have said with good reason, that the French had lost their wits, or rather they would have taken them for jugglers; it is said those pretended mines were the ruin of *M. de la Salle* in 1684, when he missed the mouth of the *Mississippi*. He did not take notice, that the interior parts of this vast continent had more precious

cious treasures: they were to be found by cultivation, which is the mother and nurse of all mankind, and the riches of countries.

We were obliged to keep along the coast of *Florida*, and on the thirty-seventh day of our voyage we were near *Louisiana*. Unhappily for us, a violent storm exposed us to the danger of perishing, and obliged us to go towards *Cuba*, where, not finding the squadron, we imagined the English had raised the siege; but we were going to deliver ourselves up into their hands, as shall appear from the sequel.

We resolved to touch at the *Havannah* in order to take in provisions, which we were in want of, and likewise a coasting pilot. We came to the road on the eighth of September 1762, hoisted a flag, and fired several cannons to call assistance, but were surpris'd to see nobody come; however, approaching more and more, and just as we were entering into the port, we saw *Castle Moro* almost demolished, which made us take a resolution to launch our boat with some officers, to go upon discovery; our canoe luckily met with a Spanish *balandra*, or small vessel, going out of the harbour, having some families of that nation on board, with a passport from the *English* governor, Lord *Albemarle*;

*marle*; the master of this vessel informed us, that the town and fort surrendered to the *English* on the 12th of August 1762.

We instantly veered about; an English frigate went to chase us; but Providence, attentive to our preservation, sent a very thick fog, by means of which we got off, and entered the channel of *Bahama* at night.

Some days after, we saw a ship preceded by two boats. We soon saw that she was a privateer from the isle of *Providence*, and that the two boats were prizes taken from our countrymen; she came to attack us, and we received her well, though inferior by four guns\*; then, not relying on our mercantile cannoneers and officers, every one of us exerted himself to the utmost, and employed all his knowledge of artillery; our cannon was served so well, that, after a brisk fire during about three hours, the rigging of the English ship being almost entirely destroyed, and the ship itself not able to withstand

---

\* I must observe here, that before we left *New Orleans* *M. de Kerlerec* took away two of our cannon, and this vessel, which had brought the staff-officers of the regiment of *Angoumois* to *Louisiana*, had fourteen guns; it is certain, that if we had had the same number, the privateer and her prizes must have struck to us,

stand our fire, she was obliged to retire, and we were lucky enough to have nobody killed or wounded on board; our ship was shot through, and our sails and rigging so much damaged, that we were obliged to put up new ones in their stead.

During the fight, we were exposed to a great danger, the wind sending back some burning oakum into our ship, it set fire to a box of cartridges on the quarter-deck; but happily it did not communicate to the powder-room, which would have blown us up.

The wind continued contrary to us, and we were in the open sea, without knowing when we should be able to touch any where. Every day the danger of starving to death became more and more visible, being already reduced to the fourth part of our allowance. We held a council, in which we resolved to attack the first ship of the enemy which we should meet with, or to make a descent upon the coast of *New England*, we being just opposite that province, in order to get provisions, or die sword in hand. The undertaking was bold, and I may say desperate, but our proverb says, Hunger drives the wolf out of the wood\*; we were come to that extremity, when,

---

\* *La faim chasse le loup hors du bois.*

when, by an effect of Providence, we got sight of a great ship : we bore down upon her immediately, being determined to grapple, because she appeared to be stronger in the number of her cannon ; we hoisted English colours, but she crowded her sails to get off ; however, as we had gained upon her, she prepared for the fight so boldly, that it would have kept off any but hungry people ; we hoisted our colours according to custom, by firing a gun ; and having brought our ship to the proper distance, we gave her a broadside, upon which she struck to us immediately. Her cargo was very rich ; we took away her cannon, and many chests full of muskets, pistols, and sabres, which served to arm us ; but we found few provisions in her, as she was near the place of her destination. After having ransomed her, we left her just provisions sufficient to reach *Carolina* with, whither she was bound, and from whence she was not above seventy leagues distant.

We now thought we might venture to sail for *Europe* with the provisions we had got, hoping that, as we were well armed, we might take another prize, or touch at the *Azores* \* ; but we were disappointed in these expectations,

the

---

\* Isles between *Europe* and *North America* in the Atlantic ocean.

the contrary winds always prevented our landing, and having met no vessel on our passage, we were during fifty days reduced to extreme misery, having no more than three ounces of biscuit, and half a bottle of water every day\*.

This poor subsistence would soon have been consumed, if a violent storm had not, after numberless dangers, happily brought us to *Spain* on the ninety-fourth day of our passage, after having escaped from perishing by the waves, the sword, fire, hunger, thirst, &c.

Our first care on arriving in the port was to thank the Supreme Being by a *Te Deum*, during a general discharge of our artillery.

We found the Chevalier *de Ternay* here, who commanded the French Squadron, coming from the glorious *Newfoundland* expedition. This brave officer was surpris'd to see so many soldiers sent back in our ship, in time of war, who could be useful in *Louisiana*. Part of them he took into his own ships, to serve there during the rest  
of

---

\* We had found in the *English* vessel thirty quarts of barley groats, which were of great use to us; we boiled them in water with mouldy biscuit; and this mixture made a dish which we found excellent; so true it is, that hunger is the best sauce.

of the campaign; the others, who had got their leave, signed *de Kerlerec* and *Foucaut*, disembarked, and took service among the Spaniards, in the army which was destined for *Portugal*.

We went on shore the first of November 1762, in a body, to pay a visit to the Marquis *de Croix*, captain-general in the kingdom *Gallicia*. This nobleman received us very graciously; from thence we went to M. *David*, consul-general of the *French* nation in *Gallicia*, resident at *Corunna*. We begged he would advance us what we were most in want of, as we were without money to live upon the road in Spain; he answered, that he had no orders to do it, but that when he found an opportunity of obliging a set of worthy persons, he took every thing upon himself: we thanked him for his goodness.

After this, having rested a little, to recover from the fatigue of our voyage, we are preparing to go to *France* by land, and hope to arrive at court in the beginning of January 1763.

I hope I have omitted nothing worthy of observation during our correspondence, in which I have endeavoured to be as exact as possible, and to imitate at the same time the bee which works for others. I do not speak of my success

to you; you must have observed from my letters, what disagreeable situations I have been in, for disapproving of the immense abuse of authority, and for striving to go against the current. I asked leave to return to *Europe* in neutral vessels, which the governor always refused to grant under various pretences, forcing me afterwards to go in a merchant-ship, in which I have been exposed to perish as you have seen above.

As to rewards, is it not enough for a citizen to have been faithful to his king, and useful to his country? It is merely from this consideration, that I will hope that our equitable and wise prime-minister, will have the kindness to acquaint the best of kings with the zeal of an officer, who has had the honour and satisfaction to serve him well both in *Europe* and in *America*; I shall, with a respectful confidence, expect the honourable rewards due to military merit: and these compensations from the hand of our monarch, will be a thousand times more precious to me than all the riches of the *Indies*. I expect to have the honour of seeing you soon, and am, S I R, &c.

*At Corunna, the 10th of  
November 1762.*

## OF THE MANUFACTURE OF CLOTH

AND OF THE MANUFACTURE OF WOOLLEN CLOTH

IN GREAT BRITAIN

AND OF THE KINGDOMS OF IRELAND AND SCOTLAND

BY JAMES SMITH, ESQ. OF THE BARR

IN TWO VOLUMES. THE SECOND VOLUME.

LONDON: PRINTED BY R. CLAY AND COMPANY, ST. MARTIN'S LANE, 1773.

either by word of mouth, or by letter upon such points as were not sufficiently clear to them: *Loefling* made a good use of this leave, and never failed to propose to his tutor by every return of post, some queries on botanical subjects, which were delivered by his intimate friend *John Otto Hagstroem*, who is now physician to the province of *Ostgothland*. The great *Linneus* soon discovered in the course of this correspondence, his botanical genius, and in order to encourage him, he was never deficient in answering regularly his queries.

*Dr. Linneus* desired him to return soon to the university, where he had the best opportunity of improving himself in a science for which he had a peculiar turn. The pupil was ready to comply with this invitation; but found himself under the most critical dilemma, on account of the poverty of his parents, who could not afford to keep him any longer at the university at their expence: he therefore begged the doctor to procure him a place as private tutor. The professor thought it his duty to encourage so fine a genius, and as there was no other opportunity to place him, he resolved to take him into his house, and to make him the companion of his own son. He foresaw that the tutor would not only kindle a desire for improvement in botany,  
in

in his tender pupil ; but that even his enthusiasm would be communicated to his young friend, and so it really happened. In this station *Loefling* made the best of his time, and of the opportunity of improving by the Doctor's lectures, at which he was assisting very regularly ; the rest of the time left to him, he spent in seeing the most ingenious and diligent students, whose friendship he acquired, and in visiting the botanical garden several times a day, and at dinner he proposed queries and dubia to his tutor, by whom he now was esteemed worthy of the greatest intimacy and friendship ; for the doctor observed in his pupil, according to his own expression, " a mind as pure as gold, and without the least duplicity of manners or words, which were exactly corresponding with his most secret thoughts." He was not effeminate, and relished neither the pleasures of the table, nor vanity in dressing ; he slept as comfortably on the hardest bench, as in the softest bed ; and the finding of a small plant or moss, repaid him amply the fatigue of a long excursion.

In the summer term of 1748, the Doctor gave to each of his scholars a branch of botany for its illustration, as a task. *Loefling* got the buds of trees for his allotted share, as this subject had never been well inquired into, and he was the  
only

only one who executed his task. The benefit of visiting the botanical garden at every hour of the day, gave him an opportunity to make the most accurate observations on the buds of trees, from whence he drew the most curious inferences, which he published in 1749, in a dissertation *de Gemmis arborum*. In the year 1750, Dr. *Linnaeus* began to draw up his *Philosophia Botanica*, but he was attacked by so violent a fit of the gout, that he was almost past all hopes of recovery; the disease however relenting a little, he dictated the work to *Loefling*, who went on with it as fast as the press could go. This business, was not only amusing to *Loefling*, but proved very useful to him; for he never failed to apply to his tutor for the elucidation of such articles as he did not understand, which was readily granted, and thus the pupil became a perfect master of the Doctor's system and its spirit.

*Linnaeus* pursued his grand plan in botany with an undaunted courage and perseverance in spite of all the fatigues, obloquy, and ingratitude he met with. His disciples were gone to the most distant parts of the globe, and returned loaden with the most curious discoveries. *Kalm* from *Canada*, *Osbeck* from *China*, *Hasselquist* from *Egypt*, *Toreen* from *Suratte* and *Montin* from *Lapland*.

*Lapland.* The southern parts of Europe, however were less searched, than those in the remotest parts of India. For this purpose the great botanist endeavoured to get acquainted with the *Marquis de Grimaldi*, the Spanish ambassador at the *Swedish* court; in order to obtain leave for one of his pupils to travel through *Spain*. The first steps for this purpose were scarcely taken by the Doctor's friends, when the ambassador sent him word by Lieutenant *Radbaud*, that his Catholic Majesty had already desired to have a botanist from Dr. *Linneus*, which occasioned him great astonishment: but it is worthy to be remarked, that some Englishmen had been the first who occasioned the court of *Spain* to send for a botanist to *Sweden*, at a time when *Linneus* had been most anxious about the method of introducing one of his pupils into *Spain*. Some English gentlemen, and among them, *Robert More*, Esq; F. R. S. observing with what indolence and carelessness the greater part of travellers passed through those parts of our globe, which when diligently searched, might afford a vast field for discoveries and new observations in Natural History, resolved to travel in company, through *France*, *Spain*, *Italy*, *Switzerland*, *Germany*, *Denmark* and *Sweden*, with a view to fulfill in part the plan to enquire more accurately

accurately into the various curiosities peculiar to each country. These gentlemen being in *Spain*, were invited to dine with *Don Carvajal*, who accidentally asked them their opinion about *Spain*; they answered, that its curiosities had by far surpassed their expectation, and that for all this, the remark of *Linneus* in his *Bibliotheca Botanica* were still true, that the *Flora Hispanica* would turn out as new as it was rich. *Don Carvajal* wished to see the Doctor's performance, and having read the passage, he declared, that *Spain* should in a little time be free from such a reproach. *Mr. More*, in his tour through *Sweden*, communicated to the Doctor this anecdote, when he visited the university of *Upsala*, and thus it became a key to the message of the *Marquis de Grimaldi*, which had caused *Linneus* so great an astonishment.

*Dr. Linneus* was very happy, as he heard he had leave to select out of his pupils, one whom he thought most deserving of occupying a place that would be both honourable and profitable: he fixed upon *Loefling* his favourite; and though this young man had gone through the usual exercises, and was to obtain the degree of Doctor of *Physic* in three months time, he resolved to neglect this honour, and to go on his tour to *Spain*. In a month's time he was ready, having taken

taken leave of his relations, friends, and country. The Royal Academy of Sciences made him a present of a fine English microscope, a thermometer, a most exact geometrical scale, and many other instruments. Count *Piper*, Mr. *Peter Wargentin*, the one president, the other secretary to the Royal Academy, and many of its members, vied with each other in contributing to the equipment of the young botanist. The director of the *Swedish East India* company, *Clas Grill*, generously offered him a free passage and board, in one of his ships bound for *Porto in Portugal*: and the *Marquis Grimaldi* granted him a handsome allowance towards the expences of the Tour to *Madrid*. *Loeßing* was well made, tall, strong, and of a healthy constitution, unimpaired by debauches and luxury, all which promised him good success in his labourious undertaking in a foreign climate. The leave he took of his tutor at *Upsala*, was very affecting and moving. The nineteenth of March, 1751, he left for ever his native country, went round the *Baltic*, passed the *Sound*, crossed the *German* ocean, the bay of *Biscay*, and at last arrived May the eighteenth, at *Oporto*. Some *Fuci* and marine productions of the *Vermes* Class, amused our natural historian during his passage; but the *Portugueze Flora* was an ample field for his inquiries,

quiries, he collected every plant, dried specimens, collected seeds, and sent them to *Linnaeus*. For want of another ship, and not venturing to go to *Lisbon* in a *Portugueze Caravela*; he staid at *Oporto* till the beginning of August, when he took his passage in a *Swedish* ship. They were becalmed, and therefore spent eight days on a passage of a few hours. Here he found a very remarkable difference in the climate, which produced the finest *American* plants, as the *Agave Americana*, *Cactus opuntia*, *Phœnix dactylifera*, and the *Dracena Draco*. Mr. *Godin*, a *French* astronomer, who had been fifteen years in *America*, and who was appointed Director of the Academy of Marines at *Cadiz*, took *Loefling* in his company, and left *Lisbon* with him the latter end of September. During the journey, the attention of the young botanist was employed in examining those wild growing plants, which in this country were the ornaments of the best gardens, and required a careful cultivation. He found the *Narcissuses*, the *Leucoya*, *Ornithogala*, *Squills*, and *Asphodels* in full flower: *Lavender*, *Sage*, *Rosemary*, *Fenil*, *Thyme* and *Stocchas Arabica*, spread their odoriferous effluvia; and the groves consisted of *Olives*, *Myrtles*, *Coluteas*, *Jessamines*, *Rosebays*, *Phyllyreas*, *Mastic-trees* and *Chio Turpentine Trees*,  
All

All these contributed to make his journey both useful and agreeable. At *Madrid* where he arrived, after having been seventeen days on the road *Loefling* began to fear he should find neither botanists, nor friends, nor patrons: but the gloom which this thought had spread over his countenance, was soon changed into joy and contentment, by the recommendation of Mr. *Godin*, who introduced him into the best companies, and presented him to Don *Carvajal*, who favoured him with a kind and gracious reception.

The most unexpected thing to him was the great number of lovers of botany, which he found at *Madrid*. Four of them deserve chiefly to be mentioned: viz. Don *Joseph Ortega*, chief apothecary to the army, and secretary of the physical academy at *Madrid*; Don *Minuart* chief apothecary to the hospitals; Don *Quer*, first surgeon to the king, who had a splendid botanical garden, and a most elegant collection of plants; and Don *Christoval Velez*, apothecary and examiner of the College of Physicians, who was possessed of a choice collection of botanical books, of a grand *Hortus Siccus*, and had drawn up a *Flora Madritensis*. These gentlemen found our young botanist much to their liking; he was carested by every one, and their  
houses,

houses, gardens and libraries were at his service. He got from the king a pension of eight thousand Reals per annum, without becoming the object of their envy.

*Loefling* gained more and more the favour of these physical gentlemen, and paid to each of them a handsome compliment, by calling four new plants found in *Spain* after their names, which will be a lasting monument of the gratitude of the *Swedish* botanist, as *Linnaeus* has taken these names into all the subsequent editions of his *Genera* and *Species plantarum* and into the last editions of his *Systema Naturæ*. *Loefling* staid about two years at *Madrid*, and made during that time some little botanical expeditions in its neighbourhood: and collected above 1300 distinct species of *Spanish* plants. The ministry then began to think of sending *Loefling* to *Spanish South America*. The plan for this expedition was great, and worthy of *Don Carvajal's* genius and love for the sciences. According to this plan the whole expedition should be under the direction of *Don Joseph de Itturiaga*, *Capitan de Altopordo* in the fleet, and director of the *Caracas*, and the trading company there: under him was the next in command, *Don Eugenio Albaradi* Colonel in the land service, a native of *Lima* in *Peru*. Four professors

professors were at the head, each of one science, viz. 1. a geographer; 2. a natural philosopher; 3. a botanist; and 4. one acquainted with commercial affairs. Each professor had four assistants, and besides them were four surgeons, and many other people intended for this expedition. Don *Juan Ignatio Madariaga* and Don *Joseph Solano* both Capitans de Fregatta, with Don *Joseph Santos Cabrera* were for the geographical department. *Loeßing* was the head botanist, and had Don *Benito Paltor*, from the Pyrenees, and Don *Antonio Condal*, from Barcellona, two young physicians, for his assistants: and two other youths, born at *Madrid*, of wealthy parents, called Don *Bruno Salvador*, and Don *San Juan de Dios Castel*, were intended for draughtsmen and pupils in natural history. The other departments were filled up in proportion, so that this might have turned out one of the grandest and most useful undertakings if properly conducted and executed. *Loeßing* got twenty thousand *reales de Vellon* towards his equipment in linen, cloaths and other necessaries. His salary was increased to ten thousand reales per annum, and that of each of the physicians under him, was fixed at five thousand reales. The regulation of the limits between the Spaniards and the Portugueze in North A-

VOL. II.                    G                    merica,

merica, was the chief object of this expedition; Don *Carvajal* represented to the king that this would be the best opportunity to get acquainted with the products of the interior parts of this extensive continent: that France and England were great only by the knowledge and use of the fine products of their settlements in America; that South America, no doubt, was richer in them than any other part of the world, and that nothing was wanting to reap the same benefit from the Spanish colonies, than a nearer inspection into, and examination of, the American plants, animals, and natural productions, which could now be procured by the addition of a good natural historian. This being at last agreed to by the king; the expedition was put into execution, and *Loefling* ordered to go with his assistants to *Cadiz*. From whence they set sail February the fifteenth, 1754. The passage was happy and short; they passed February the twenty-fourth, the *Canary Islands*; April the third, the isle of *Tabago*, the fourth, the isles of *Granada* and *Margarita*, and arrived April the eleventh at *Cumana*, the capital of the province of *New Andalusia* or *Cumana*.

This town is under the tenth degree north latitude. Their summer begins at Christmas, and ends at Midsummer-day, from which time to Christmas,

Christmas, they reckon their winter. During this winter, the Swedish thermometer of Professor *Celsius*, was within doors constantly, between twenty-six and thirty degrees, and in summer between thirty and thirty-three. Out of doors the heat is, between nine and five o'clock, excessive, so that it would be intolerable for the whole animal and vegetable creation, did not at the same time a constant east wind and rain, contribute towards abating the heat while the sun is in the zenith.

Here *Loeßing* found a new world, every plant he beheld was new, and their great number gave him employment from morning to night. This expedition was intended to go up the great *Orenoco* river, then by *Rio Negro*, into the *Marranon*, or river of *Amazons*, and afterwards along the limits of *Brazils*, till to those pretended lakes which are situated at the source of *Rio de la Plata*, which river they intended to follow to *Buenos Ayres*, and from thence the tour should go back through *Chili*, *Peru*, *Lima*, and *Quito*, all countries which never had been visited by any botanist of note, if we except that Mr. *Jussieu* had seen part of *Peru*.

G 2

During

---

The here-mentioned degrees of *Celsius's* thermometer, correspond thus with the degrees in *Fahrenheit's* scale, 26=79½; 30=86; and 33=91.

During the whole passage he gave lectures on botany, to his pupils, and made them acquainted with the use of the Linnæan system; the *Philosophia botanica* was his *Syllabus*, and the young physicians seemed to apply very closely to the study of botany. At his landing the collection of plants and seeds, the examination and description of every new object, and the drawings of such things, as were either new or not well drawn before, gave sufficient occupation to *Loefling* and his assistants.

During six months residence at *Cumana*, he made an excursion through *New Barcelona*, and the missions of *Piritu*, towards the river *Guayana*, where he continued his observations during two or three months; from thence he travelled to the mission of *Curoni*, and then returned to *Cumana*; but he and the whole company fell sick at their return, of a fever or ague, of which he had every day an access. This being removed, he fell ill again with a tertian, having got wet feet in a marsh. Some time after this was cured, he got again a quotidian fever, which he could not get rid of for a long while. His chief shewed great care and tenderness for his health, and desired him absolutely not to write, till afternoon or in the evening, the only proper time for this business in those hot climates: for

*Loefling*

*Loefling* had already collected about six hundred species, and among them were about thirty new *Genera*, and about two hundred and fifty species not mentioned before by Dr. *Linnaeus* in his works, the descriptions of which he drew up. The fever had emaciated poor *Loefling*, he got a double tertian with fainting fits, but conquered this. In the beginning of 1755, he went to the mission of *Merercuri*, here he got new paroxysms of intermittent fevers, and soon after the *Leucophlegmatia* (perlesia) and at last that kind of dropsy called *anasarca*, of which he died February the twenty-second, 1756. His tutor *Linnaeus* published *Loefling's* letters containing absolutely nothing but descriptions, queries and *Dubia* about plants, with some repeated acknowledgments to his tutor, some descriptions of rare Spanish plants, which are given here at full length, and reckoned by Dr. *Linnaeus* to be models in their kind; lastly, some descriptions and remarks on *American* plants which are likewise here added.

Thus died together with *Peter Loefling*, the hopes of the great advantages to natural history, which were expected from his tour through *Spanish South America*; which country no doubt is the richest field for discoveries of every kind in natural history and whose treasures are now, as

it were, buried, through the indolence and jealousy of the Spaniards and their ministry.

The here annexed catalogue of North American plants, the advantages which accrue by their knowledge to trade and commerce, the daily new accessions to the Flora of this extensive continent, procured by the activity of this great, learned and commercial nation are an incontestible proof of the advantages which might be reaped, if *South America* were in the hands of a nation possessed of the same spirit of industry, and free inquiry, which are the two great supports of national wealth and liberty: they prove at the same time the providential care over this wealthy and free nation, in that spirit of indolence and jealousy, with which the Spaniards are still infatuated, and probably will be so for some time, in spite of the great and expensive efforts made from time to time by their government, in order to promote industry and learning, and to put their commerce on a better basis. The premature death of *Loefling*, though very hurtful to science in general, may however be considered as a further proof of this assertion: he died in the prime of his youth, with a strong constitution, supported liberally in a science in which he was an enthusiast, before he could go on the intended great expedition, before he  
could

could instruct the pupils trusted to his care, and before Spain could reap the least benefit from the science of this promising and able botanist, and which no doubt it would have enjoyed, had he gone through the intended great tour in *South America*.

I conclude with a most ardent wish, that England may never be without disinterested and patriotic men, who for the increase of useful learning and the knowledge of nature, will exert their influence, genius, and wealth, to promote, encourage, and protect, the investigation of natural history in the West-Indies and America, on the Senegal and Gambia rivers in Africa, and the great and extensive possessions which the English enjoy in the East-Indies, and wherever their navigation extends.

O R T E G I A.

1.  R T E G I A *hispanica*.

 O  Juncaria salmanticensis. *Clus. Hisp.*  
 502. f. 503. *hist. p. 114.*

Rubia linifolia aspera. *C. Bauh. pin. 333. Raj.*  
*hist. 1033.*

*Habitat* in vineis Salmanticae, *Clusius*. In Ca-  
stilia veteri, *Minuart*. In *Baetica* ad Pe-  
droches de Cordova, *Velez*.

*Radix* annua *Clusio* (sed videtur perennis se-  
cundum specimina Domini VELEZ), flexu-  
osa, glabra, tenuis.

*Caulis*

88 PLANTAE HISPANICAE.

*Caulis* erectus, spithamalis usque pedalis, articulatus, quadrangularis, striatus, scabriusculus.

*Rami* oppositi, a basi caulis usque ad summum, erecti, cauli consimiles, ramulosi vel simplices.

*Folia* opposita, linearia vel lanceolata-linearia, acuta, semiuncialia, erecta, sessilia, scabriuscula.

*Flores* in corymbis confertis, dichotomis, brevi ramulo sustentatis, oppositis; sessiles.

*Bractæe* minimae, acutae, oppositae ad singulam divisionem dichotomiae.

**CAL.** *Perianthium* pentaphyllum, erectum: *foliis* oblongis, acutis, subcarinatis, marginibus intus coloratis.

**COR.** nulla.

**STAM.** *Filamenta* tria, subulata, calyce dimidio breviora.

*Antherae* oblongae, lineares, compressae, filamentis paulo breviores.

113. **PIST.** *Germen* ovatum, medietate superiori trigono-pyramidatum: angulis subacutis. *Stylus* filiformis, rectus, simplex, calyce paulo minor. *Stigma* capitato-obtusum, simplex, apice levissime emarginato.

**PER:** *Capsula* ovata, medietate superiori trigona, calyce tecta, unilocularis, ad medium trifariam dehiscens.

SEM.

SEM. plurima, oblonga, utrinque acuta, minutissima.

*Color Calycum* incanus, marginibus subalbis; *Germinis* luteo-viridis, *stigmatis* & *Antherarum* luteus.

Ab Illecebro spurio (*Loeflingia*) cui proxime accedit, differt corolla nulla; calyce obtusiore ovato, foliolis integris oblongis; ob stylum unicam alias proxima.

LOEFLINGIA.

2. LOEFLINGIA *hispanica* (Illecebrum spurium Loeff.).

*Habitat* Madriti in collibus nudis cis Casam del Campo, supra saltum, vulgo foto de Migas calientis, copiose.

*Radix* tortuosa, descendens, ramosa, glabra, annua.

*Caules* solitarii vel plures, profusi, procumbentes, sursum paullo ascendentes articulati, teretes, pilis viscidis tenuissime pubescentes, longitudine semiunciali vel digitali.

*Folia* opposita, ad genicula inferiora, lineari-acuta, minima, ad basin denticulo utrinque acuto, brevissimo erecto notata; superiora subulato-tridentata: denticulis lateralibus erectis in medio latere folii.

*Flores*

92 PLANTAE HISPANICAE.

*Flores* sessiles, axillares in spicis lateralibus alternis imbricati, conferti.

*Braeae* subulatae, tridentatae, parvae, imbricatae.

**CAL.** *Perianthium* pentaphyllum, erectum: *foliis* distinctis, lanceolatis, leviter intus inferius concavis, apice tereti subulato acutissimo, pilo quasi terminato, lateribus similiter ac folio denticulo utrinque subulato, brevissimo notatis, interioribus tribus intus quasi coloratis, foras omnibus subviscosis.

**COR.** *Petala* quinque (non raro solum quatuor, quantum est possibile videre), minutissima, oblongo-ovata, globosa, conniventia, integerrima.

114. **STAM.** *Filamenta* semper tria, corollae circiter longitudinis vel levissime breviora, hinc minutissima. *Antherae* subrotundae, didymae.

**PIST.** *Germen* ovato-trigonum, parvum. *Stylus* simplex, filiformis, brevis, sursum paulo crassior. *Stigma* simplex, obtusiusculum, omnino indivisum.

**PER.** *Capsula* ovata, apice obsolete trigona, trifariam dehiscens, ynilocularis.

**SEM.** plura, ovato-oblonga, minima, punctis (lente visa) minutissimis punctata.

*Color* Corollae pallidus.

Genus

Genus mihi difficile designatur; viderur tamen proxime accedere ad Illecebrum, sed stamina tantum tria et femina plurima, diversa sunt. Facies Plantae et ramificationes Herniariam et Paronichiam referunt, sed differt ab illis praesenti corolla et numero staminum, uti a Mollugine stylo simplici. Videtur tamen, ni fallor, similitudinem habere quandam cum fructif. illecebro cymoso, quam, non nisi exsuccam, vidi in Estremadura.

## II. DIGYNIA.

## SCHOENUS.

3. SCHOENUS *aculeatus*.

PHALARIS repens, floribus sessilibus fasciculatis fastigiatis, foliaceo bivalvi compresso obtectis. *Loefl.*

*Habitat* in depressis subhumidis nudis, fluxu Maris quotidie inundatis, ad St. Ybes Portugalliae.

Gramen minimum et repens est.

*Radix* parva, fibrosa, culmos plurimos producens.

*Culmi* minimi, vix semidigitales, repentes s. arte terrae incumbentes, profusi, tribus quatuorve geniculis ex singulo ramulo.

*Rami*

*Rami* prodeuntes, confimiles.

*Folia* brevissima, graminea, ovata f. lanceolata, disticha, complicata.

*Vagina* in foliis culmaceis geniculorum fere longitudine, glabra, striata, inferius gibbo-ventricosa.

Membranula nulla, sed ejus loco pili tenuissimi, parvi.

115. *Flores* terminales, culmi ramulis sessiles, aggregati in Capitulum plano-compressum, fastigiatum, truncatum.

*Involucrum* bicornes ex foliis binis, brevissimis, conduplicatis, vagina ampla compressa, florum fastigio paullo longiore.

**CAL.** biglumis, compressus; glumis subaequalibus, (altera paullo brevior angustior; dorso acuto, compresso), muticis, glabris, unifloris.

**COR.** biglumis: glumis calyce latioribus, dorso acutis, compressis, calyce paullo majoribus, muticis.

**STAM.** - - - -

**PIST.** - - - -

**PER.** corollae glumae semen continent, demittunt.

**SEM.** unicum, oblongum compressum, sulco

in altero latere, nudum nec corolla adnata  
obtectum.

D A C T Y L I S.

4. DACTYLIS *cynosuroides* quae Phalaroides  
spicis linearibus terminalibus secundis ad-  
pressis.

*Habitat* in locis palustribus, marinis, argillo-  
fis, graminosis trans Fluvium Tagum Ulyf-  
siponi Lusitaniae, autumno florens.

*Radix* fibrosa, repens.

*Culmi* erecti, solitarii, pedales circiter, superne  
foliosi, inferne nudi, foliis orbati et quasi  
spongiosi ab vaginis persistentibus, imbrica-  
tis; frequenter et minute geniculati, glabri.

*Folia* graminea, erecta, involuta, glabra, su-  
pra subtiliter striata, quasi subtomentosa.

*Vaginae* longae; totum Culmum ubique  
vestientes, geniculis 5 *plo.* 6 *plo.* 10 *plo.*

&c. longiores, glabrae, imbricatae post  
folia decidua per inferiorem culmum.

*Membranula* integra, rigida, brevissima  
vixque nisi margo vaginae truncatus.

*Flores* spicati, unilaterales, duplici serie alter-  
natim, imbricati, solitarii, sessiles, erecti.

*Spicae* ternae, rarius binae, l. quaternae,

alternae, terminales, lineares, arcte

dorso suo singulo nodo sibi invicem ap-

proximatae,

96 PLANTAE HISPANICAE.

proximatae, adpressae, unicam spicam  
saepe mentientes.

116. *Axis* florifer antice, varie ob Flores ad-  
pressos excavatus, postice nudus ob  
spicas invicem adpressas saepe oblique  
planiusculus.

CAL. biglumis, uniflorus: *glumis* lineari-  
bus, acutis, complicato-carinatis: altera  
interiore paulo brevior multoque angu-  
stior: muticis.

COR. biglumis; *glumis* lanceolatis, conca-  
vo-carinatis, calyce paulo longioribus et  
latioribus: altera paulo minori.

STAM. *Filamenta* tria, brevia. *Antherae* line-  
ares.

PIST. *Germen* lineare, oblongum, fursum la-  
tius. *Styli* duo, longitudinaliter villosi.

PER. - - - -

SEM. - - - -

Qua Genus omnino eadem cum praece-  
denti, licet facies totaliter diversa, ut  
mihi videtur.

FESTUCA.

5. FESTUCA *calycina* panicula contracta, spi-  
culis linearibus muticis longitudine calycis  
flosculorum.

*Radix*

*Radix* fibrosa, alba, tenuissima: fibrillis longis, simplicibus, glabris vel pubescentibus; fasciculos culmorum et foliorum protrudens.

*Culmi* setacei, triarticulati seu duobus geniculis leviter inflexis instructi, erecti.

*Folia* radicalia aggregata, setacea, semiuncialia vel uncialia, basi latiuscula, superius convoluta, plerumque glabra, interdum per mediam partem pilis longis, raris, albis hirsuta.

Culmorum brevia, setaceo-convoluta vel glabra, vel saepe in eadem planta hirsuta pilis raris, longis, praesertim basin versus.

*Vaginae* longae, filiformes, subtiliter striatae.

*Membranula* vix ulla, sed pili longi, exstantes, albi, copiosi, ejus loco cingentes vaginam et intus et foris ad basin foliorum.

*Flores* in panicula erecta, contracta, semiunciali circiter colliguntur.

*Pedunculi* breves, erecti, floribus raris: spiculis linearibus. 117.

CAL. *Gluma* bivalvis: *valvulis* subaequalibus, dorso rotundatis, apice, subacuto, totius spiculae longitudine.

COR. composita, quinque-f. sexflora, hermaphrodita: junctim teretiuscula, linearis: flosculis brevibus, alterne axi adpressis.

*Singula* biglumis: *gluma* dorsali oblonga, obtusa, dorso convexo, striato, apice tenuiter membranaceo, mutico; inferiore paulo minore, obtusa, membranacea.

STAM. *Filamenta* tria, brevia. *Antherae*. - - -

PIST. *Germen* ovale, glabrum. *Styli* - - -

PER. nullum, corollae adnascitur, decidit, non dehiscens.

SEM. ovato-oblongum.

Gramen parvum, uncialis biuncialis vel palmaris altitudinis. Apud Scheuchzerum non invenio.

Festuca haec affinis valde est Festucae decumbenti. Fl. Suec. 92, differt tamen ab illa, quod tenerrima et omnibus suis partibus minor. Spiculae descriptae sunt lineares et congeries flosculorum, omnino teretiusculo-linearis, quae in Suecica ovato, acuta, congerie flosculorum basi latiore, glumis calycinis magis tumidis, etc.

A I R A.

6. AIRA *minuta* panicula laxa ramosissima, floc-  
culis muticis.

Gramen phalaroides, sparsa panicula, mini-

PLANTAE HISPANICAE. 103

SEM. oblongo-cylindricum, glabrum, utrinque acutum.

Hispanis nominatur *Esparto*. *Ufus* hujus frequentissimus per universam Hispaniam ad stercas ob pavimenta lateritia, per hyemen: ad funes crassiores (*cables*) pro navibus atque corbes et alia utensilia pro transportandis fructibus.

III. TRIGYNIA.

HOLOSTEUM.

8. HOLOSTEUM *umbellatum*.

Alfina verna glabra, floribus umbellatis albis. 120.

*Tournef. inst.* 242. *Vaill. Paris.* 7. n. 4. *descr. bona* (*refert ad fig. 2. tab. 3.*) quae proprie est Alfinis vernae glabrae *Magn.* attamen praesentem plantam, primos flores explicantem, sat bene repraesentat.

*Habitat* Madriti, vulgatissima primo vere.

*Radix* tenuissima, annua, fibrosa.

*Caulis* suberectus (vel subprocumbens), semidigitalis usque spithamalis, glaber vel tenuissime pubescens; prope radicem ramulosus: ramulis erectis cauliformibus.

H 4

*Folia*

*Folia radicalia* copiosiora, lanceolata.

*Caulina* opposita, lanceolata, basi coadunata, glabra; at lateribus saepe pilis raris tenuissimis, praesertim inferius ciliata.

*Flores* terminales 4-8 ex eodem loco orti, successively excrecentes. *Pedunculi* ab initio brevissimi, demum elongantur, filiformes; post florescentiam semiunciales vel unciales, deflexi.

*Braeae* umbellae subjectae; ovatae, acutae, brevissimae.

CAL. *Perianthium* pentaphyllum: foliolis lineari-lanceolatis, longiusculis, acutis, concavis, glabris.

COR. *Petala* quinque, lanceolata, integra, acuta, ad apicem tamen incisura sublaterali, obtusa, obliqua notata vel inaequaliter saepe tridentata, calyce paulo longiora.

STAM. *Filamenta* tria, subulata, petalis dimidio breviora, basi glandula tumida depressiore imposita. *Antherae* bipartitae, didymae.

PIST. *Germen* oblongum, obtusum. *Styli* tres, erecti, approximati. *Stigmata* crassiuscula, divergentia.

PER. *Capsula* ovato-cylindrica, teretiuscula, recta, calyce, longior, summo apice dehiscens

scens denticulis sex, paulo inaequalibus,  
acutis, revolutis.

SEM.

Color Corollae albus.

MINUARTIA.

9. MINUARTIA *dichotoma*. foliis setaceis, 121.

caule simplici erecto, floribus sessilibus confertim dichotomis.

*Habitat* Madriti in collibus extra pontem Toletanum sat copiose.

*Planta* minima, vix unquam ultra altitudinem uncialem.

*Radix* annua, tenuissima, simplex vel ramosa, fibrillis paucis.

*Caulis* saepe ungue non major, simplicissimus, (rarius adest ramulus ex radice ferior) erectus, superius ad flores dichotome subdivisus; dichotomiis brevibus confertis.

*Folia* opposita, subulata-setacea, basi latiusculo striata, erecta, adpressa, totum caulem tegunt.

*Flores* sessiles in dichotomiis, solitarii, ab dichotomiis confertis, aequalibus, constituunt capitulum turbinatum, caulis ipse longitudine, supra aequale, quadratum, rigidum, post totam florescentiam contrahitur, rigescit

rigescit magis (Anastaticae instar); hinc fructus ob ramulos dichotomiae adpressos lateraliter compressi.

*Braëteae* sunt folia longa, setaceo-subulata, floribus duplo triplove longiora, rigida.

**CAL.** *Perianthium* pentaphyllum, erectum, sub florescentia ipsa vix patulum, sed cylindricum, alias semper clausum: *foliis* lanceolatis, acutissimis, lateribus submembranaceis, rigidis.

**COR.** nulla, sed *Nectarii* glandulae aliquot, obscure (5) intra calycem elevatae, interdum bifidae.

**STAM.** *Filamenta* tria, brevissima. *Antherae* didymae, filamentorum duplae magnitudinis.

**PIST.** *Germen* ovatum, parvum. *Styli* tres, basi conjuncti, staminum altitudine. *Stigmata* simplicia, crassiuscula.

**PER.** *Capsula* longo-ovata, lateraliter (h. e. e regione ramulorum dichotomiae) compressa, calyce tertia parte minor, unilocularis.

**SEM.** nonnulla, compresso-subrotunda, latere uno levissime emarginata.

*Color Floris* herbaceus.

10. MINUARTIA *montana* floribus confertis lateralibus alternis bractea brevioribus.

*Habitat* in collibus altis Madriti imminentibus 122.  
faltum vulgo Soto Luzon ad horum latera in arena humosa.

*Radix* parva, tenerrima, annua, fibrosa, simplex, terrae arctius adhaerens.

*Caulis* folitarius, simplex, uncialis vel minor, articulatus, glaber.

*Folia* opposita, erecta, setacea, basi latiora, striata, acuta, rigida.

*Flores* sessiles ex alternis alis per caulis longitudinem, plures conferti saepius terni, rarius folitarii.

*Bractee* sunt folia opposita, floribus sessilibus subjecta, calyce longiora, subulata.

CAL. *Perianthium* pentaphyllum, erectum; foliolis subulatis, duobus vel tribus exterioribus leviter longioribus, apice setaceis, rigidis, persistentibus.

COR. nulla.

STAM. *Filamenta* tria, plano-subulata. *Antherae*. - - -

PIST. *Germen* trigonum, rectum, obtusum; *Styli* tres, parvi. - - -

108 PLANTAE HISPANICAE.

P.ER. *Capsula* triquetro-columnaris, calyce minor, unilocularis, ad basin trivalvis.

SEM. nonnulla 3-7, subrotunda, compressa, parva.

Quum primum medio mensis Octobr. illam vidissem, floris descriptio quoadatenus manca est.

II. MINUARTIA *campestris* floribus confertis terminalibus alternis bractea brevioribus.

*Habitat* in planitie collium praedictorum.

*Radix* tenuissima, simplicissima, fibrillam referens, subtorta.

*Caulis* simplicissimus, brevissimus, medii unguis, (cum floribus vix unquam uncialis mihi visus) teres, foliis tectus.

*Folia* opposita, plano-subulata, angustissima, 7 striata, stricta, cauli adpressa, oppositionibus crebris, copiosa: superiora basi magis patefcunt.

123. *Flores* terminales, in capitulum compactum, fastigiatum sed inaequale, sessiles ex alis foliorum summorum alternis: ex ala infima (florifera) flores bini una axillari, altera laterali: ex superioribus quasi semper terni uno.

PLANTAE HISPANICAE. 109

uno axillari, reliquis lateralibus: hinc dichotomiæ particulares sunt, sed capitulum totum dichotomum non est.

*Bracteæ* subulatae, binae unicuique Flori oppositae, floribus breviores.

CAL. *Perianthium* pentaphyllum, erectum: foliolis lanceolatis, acutis, planiusculis, trifloriatis, rigidis subaequalibus.

COR. nulla, quantum videtur. *Glandulas* 3 appressas habet.

STAM. *Filamenta* tria, (quum duo magis approximata vidi, nescio an plures flori perfecto sint) setacea, tenera, germinis altitudine. *Antherae* subrotundae.

PIST. *Germen* trigonum parvum. *Styli* tres, filiformes. *Stigmata* obsolete crassiuscula, subrepanda.

PER. *Capsula* subtriangularis, oblonga, acuminata, calycis dimidio paulo brevior, unilocularis, ad basin trivalvis.

SEM. pauca 5-6, subrotunda, compresso-reniformia.

*Color* totius plantae paleaceus vel glumaceus.

Haec species propius quam prior accedit ad Minuartiam floribus sessilibus dichotomis: florum glomere tamen distinctissima. A praecedente differt:

(a) Quod

110 PLANTAE HISPANICAE:

- (a) Quod minor.
- (b) Florum glomere terminali, latiore.
- (c) Floribus multo longioribus usque lineam longis.
- (d) Bracteis flore brevioribus.
- (e) Foliis angustioribus.
- (f) Est minus terrae adhaerens
- (g) Seminibus majoribus, &c.

Polygonum

118 PLANTAE HISPANICAE.

*Polygonum fruticosum erectum hispanicum.*  
*Bar. ic. 713. bona.*

*Habitat* in montibus vulgo del Espartal et de las salinas juxta Cienpozuelos copiose.

*Radix* crassa, digiti minoris crassitie, tortuosa, plerumque superficialis, longa, procumbens hinc inde caules promens, submolliter lignosa.

*Caules* tortuosi, ramosissimi, erecti vel procumbentes, usque spithamam longi, cortice transversim rugoso, inaequali: ramis frequentissimis, patentibus, foliis acervatim onustis.

*Folia* opposita, brevissima, minutissima, oblonga, obtusa, plana, glabra: fasciculo ex alis semper prodeunte foliis minimis, confertissime glomeratis, linearibus, crassis, obtusis referto, adeo ut appareant glomeruli acerosi, oppositi, totos ramos et caules occupantes.

*Stipulae* simplices, interfoliaceae, oppositae, minutissimae, acutae, lacerae, membranaceae, subalbae.

129. *Flores* glomerati, confertissimi, copiosi in summitate ramorum; sessiles.

*Folia floralia* et *Bracteas* distinguere nequeo.

PLANTAE HISPANICAE. 119

CAL. *Perianthium* tetraphyllum, erectum vel leviter patulum: foliolis ovatis, crassis, concavis: exterioribus oppositis, a apice gibbosioribus; interioribus oppositis, planioribus.

COR. nulla.

STAM. *Filamenta* quatuor fertilia, calycis foliolis opposita, calycis altitudine, subulata. Praeter haec *Filamenta* quatuor alia sterilia, calycis foliolis interposita, absque Antheris.

*Antherae* quatuor, subrotundo-didymae.

PIST. *Germen* minutissimum, elliptico-subrotundum, compressum. *Stylus* nullus. *Stigmata* duo, crassiuscula.

PER:

SEM.

*Color* *Staminum* luteus, calycis viridis vel albopallidus.

Differt a reliquis 1. floribus quadrifidis. 2. calycinis foliolis quatuor ad basin distinctis. 3. *Staminibus* quatuor. Attamen summam affinitatem arguunt Bracteae, *Stamina* alterna sterilia, nec non facies; forte tamen ob affine Genus *Illeceabri*, necessarium erit distinguere hanc plantam ab *Herniariis*.

## SALSOLA

17. SALSOLA *vermiculata* fruticosa, floribus  
 spicatis alternis solitariis.

Kali fruticosum hispanicum, tamarisci folio.  
*Tournef. inst.* 247.

Kali geniculatum a phyllanthes, gilvis paleaceis  
 flosculis, hispanicum. *Barrel. obs.* 501. ic.  
 255. f. 6. *sub statu fructifero.*

*Habitat* per colles omnes copiose circa Madri-  
 tum atque Setubal Lusitaniae.

130. *Radix* lignosa, crassa, crassitie saepe duorum  
 pollicum, profundissime ultra pedem unum  
 vel alterum descendens, valde inaequalis,  
 perennis, supra terram adscendens, tortuo-  
 sissima, varie divisa.

*Caules* lignosi, varie basi divisi, tortuosi, co-  
 piofi, depressi, breves, perennes. *Rami*  
 steriles consimiles, ab initio pubescentes,  
 perennes.

*Fructificantes* adscendentes, interdum e-  
 recti, digitales usque pedales, recti,  
 simplices; interdum ramulis alternis  
 patentibus obsiti, annui.

*Folia* inferioribus caulibus et ramis sterilibus  
 linearia, subacuta, sinermia, supra linea  
 sulcata, breviter sparsa, cum fasciculo folio-  
 rum

PLANTAE HISPANICAE 121

rum ex alis, interdum glabra saepius levissime pubescentia.

*Flores* spicati, alterni, sparsi, solitarii, totos ramos occupantes, sessiles.

*Bractee* singulo flori tres, dorsali reliquas includente, ovatae, acuminatae, concavae, flore paulo breviores: lateralibus magis carinatis, aequalibus.

*CAL.* *Perianthium* pentaphyllum: foliolis ovatis, basi membranaceis, concavis, erectis, apice tempore florescentiae acutis absque membrana.

*COR.* nulla.

*STAM.* *Filamenta* quinque, calyce paulo altiora, setacea, planiuscula. *Antherae* oblongae ad medium ex basi bifurcatae.

*PIST.* *Germen* ovatum, paulo compressum, densius in stylum crassiusculum superius leviter bifidum. *Stigmata* acuta.

*PER.* *Capsula* ovata, acuminata, unilocularis, tecta calyce h. t. aucto foliolis quinque, membranaceis, subrotundis, latissimis, integerrimis, tenuissimis, cornei coloris, supra medium Calycis affixis.

*SEM.* unicum, subrotundum, depressum, concave vexum spirale.

*Color.* Plantae et florum herbaceo-cinereo-olivaceus, demum albo-incanus. *Floret* ad medium

medium mensis Augusti, fructificat in  
Octobri.

131.

18. *SALSOLA prostrata* lignosa, ramis filiformibus ascendentibus, floribus conglomerato-spicatis.

An Kali fruticosum hispanicum, capillaceo folio villoso? *Tournef. inst.* 247,

*Habitat* Madriti ad latera collium, citra fontem regium vulgo la fuente del Verro.]

*Radix* perennis, lignosa, digiti et interdum pollicis crassitie, profunde descendens.

*Caules* plures ex radice, basi tortuosi, sed teretes, lignosi, plerumque glabri.

*Rami* procumbentes, ascendentes, viminei, filiformes, teretes, glaberrimi, pedales usque bi et tripedales, simplicissimi.

*Folia* lanceolato-lineararia, plana, sericeo-incana, inermia, acuminata, alterna, inferius confertiora, supra remotiora cum fasciculis parvis, foliosis, ex alis inferioribus.

*Flores* summos ramos totos occupantes, spicati: glomerulis alternis inferius remotis, alternis superius versus summitates confertim spicatis.

Glomerulus singulus subrotundus ex ala folii f. Bracteae 3. 4. 6 floribus sessilibus, compositus, absque bracteis aliis  
inter-

interstingentibus: receptaculo communi piloso.

*Bractea* f. folium glomerulis dorsale, oblongo-lanceolatum, floribus paulo majus.

**CAL.** *Perianthium* pentaphyllum, depresso, obtuse pentagonum, supra planiusculum cum acumine: foliolis ovato-acutis, concavis, medio dorso horizontaliter angulato, h. t. absque alis membranaceis.

**COR.** nulla.

**STAM.** *Filamenta* quinque, calyce paulo minora. *Aniherae* oblongae.

**PIST.** *Germen* orbiculato-subrotundum, f. paulo depresso. *Styli* duo, erecti, calyce longiores. *Stigmata* simplicia.

**PER.** *Capsula* depresso-globosa, unilocularis, tecta h. t. Calyce pentagono, ex angulis calycis horizontalibus, alis membranaceis, patentibus, quadrato-linearibus, integerrimis vel suberosis, nunquam sibi mutuo incumbentibus, sed sinu interstitiali, lineari remotis.

**SEM.** unicum, depresso, spirale.

132.

*Color* Foliorum incano-sericeus; Ramorum lutescens, saepius eleganter Salicum more rubens; Calycis herbaceo-pallidus. Floret autumnno.

Sub-

324 PLANTAE HISPANICAE.

Sub florescentia non tantum qua calycem et florem, sed et qua totam faciem Chenopodio valde est similis. Calyx depressus, alae fructus non incumbentes et flores glomerati absque bracteis interstinctivis huic speciei singularia sunt; hinc a priori vulgari specie notabiliter differt.

*Habitat* in Portugallia ad Porto, ubi paucissi-  
mas legi plantas in latere collis cujusdam  
arenosi, ruderati.

*Radix* parva, fibrosa, simplex, annua.

*Caulis* erectus (semipedalis), herbaceus, teres,  
glaberrimus ramis paucis, oppositis, ere-  
ctis.

*Folia* opposita, connato-perfoliata, utrinque  
ovata, integerrima, acuta, glabra, glauca  
ut et caulis.

*Flores* pauci, dichotomi, terminales. Corol-  
la lutea.

CAL. *Perianthium* 8 vel 9-phyllum; foliolis li-  
nearibus, acutis, concavis, longis, leviter  
sub florescentia patentibus, persistentibus.

COR.

COR. monopetala, infundibuliformis: tubo cylindrico-ovato, Germini arcte adnato, idque totum, excepto summo apice, obtegente: *Limbo* tubo longiore, fere ad basin octo vel novem-fido, concavo, patulo: laciniis oblongis, inferius et superius angustatis; marcescens.

STAM. *Filamenta* octo vel novem, limbo ad basin laciniarum corollae inserta, subulata, limbo dimidio breviora. *Antherae* lineares, erectae. 134

PIST. *Germen* in fundo calycis, oblongum, crassum, Corollae tubo adnato fere totum obtectum, apice haemisphaerico solum conspicuum. *Stylus* erectus, staminum longitudine, filiformis, apice bifidus. *Stigmata* duo, crassa, lunulata, conniventia: cornubus obtusis.

PER. *Capsula* oblonga, crassa, calycis jam conniventis longitudine, fulco duplici profundiori opposito fulcata: receptaculo feminali ad valvulas prope fulcos (ni fallor, nam Capsula adhuc subsucculenta, non matura erat).

SEM. plurima, oblonga, minutissima.

Ad ordinem naturalem 52. ROTACEORUM, certe pertinet.

In partibus floris, nescio an numerus nonarius vel octonarius sit magis naturalis, plures flores vidi numero nonario in eadem planta, sed in tanta paucitate plantarum definire non audeo.

Transmitto in epistola, binas, quas habeo, plantas. Laciniae limbi dum claudatur, externe latere dextro imbricantur, hinc intorsio dextrorsum h. e. contra solem, ut *Gentiana* ante explicationem floris *Philos. bot. p. 104.*

### BUPLEURUM.

21. BUPLEURUM *fruticescens* caule fruticoso, foliis linearibus, involucro duplici pentaphyllo.

*Bupleurum* arborescens hispanicum, gramineo folio. *Tournef. inst. 310.*

*Bupleurum* fruticans angustifolium hispanicum. *Barr. ic.*

*Habitat* in montibus et collibus altis ad Aranjuez copiose, inter *Quercum humilem* *Ilicem* et *Lycium angustifolium*.

*Radix* fruticosa.

*Caulis* fruticosus, 1-2-vel 3 pedalis, varie et copiose ramosus, lignosus, teres, glabriusculus. *Rami* erecti, alterni, superius annui,

spi-

spithamali-pedales, teretes, glabri, leviter flexuosi, juncei.

*Folia* alterna, linearia, apicè valde acuta (Lini), 135.

basì amplexicaulia, sessilia, uncialia vel biuncialia, glaberrima.

*Flores* in umbellas terminales et laterales, ex alis foliorum, pedunculatas. *Pedunculus* semiuncialis.

*Umbella universalis*, radiis in ambitu 5, in centro vero uno alterove vel nullo, adeoque quinque-f. octofida. *Partiales* umbellulae (h. t. confertae, cum flores nondum explicaverint), similiter in ambitu radiis quinque, in centro pluribus, ut videtur.

*CAL. Involucrum universale* pentaphyllum: foliis brevibus, acutis, singulis singulo radio subjectis.

*Involucrum partiale* pentaphyllum, consimile.

*COR.* lutea, etc.

Finè mensis Junii nondum flores explicavit.

Differt ab alia specie Bupleuro fruticoso, quam circa Sintram in Lusitania legi, foliis, sed praesertim involucris duplicibus, quae omnino defuerunt in illa.

*CAL. Perianthium* monophyllum, tubulato-patens, breve, depresso, ad mediam partem decem striatum, lateraliter angulis acutis angulatum bilabiatum. *Lobium superius* rectum, totum glabrum, calycis parte integra longius, latum, planiusculum, tridentatum: dentibus acutis, aequalibus, brevibus,

brevibus, apice fetaceis. *Labium inferius* pubescens,  $\frac{2}{3}$  angustius, bidentatum, dentibus fetaceis. *Faux* valde aperta, sed clausa villis undique.

**COR.** monopetala, ringens, tubulata, longa, erecta. *Tubus* calyce triplo longior, basi ad longitudinem sesqui calycis angustissimus, filiformis, mox quintuplo incrassatur, laxis subaequalis, tumens, varie longitudinaliter laxe plicatus. *Lab. superius* rectum, breve, planum, bifidum. *Lab. inferius* tripartitum: laciniis lateralibus patulis; subrotundis, labii superioris longitudine; intermedia transversim oblonga, latissima, apice medio leviter emarginato, deflexa; basi fauce (palato prominulo) lateraliter paullo compressa, pubescenti.

**STAM.** *Filamenta* quatuor, quorum duo dorso propiora brevissima, in medio tubo haerentia, subulata, apice bifurcata denticulis fetaceis: terminali incurvo sterili; laterali antherifero: duo anteriora longitudine totius tubi, subulata, apice similiter bifido: antico denticulo brevior antherifero. *Antherae* medio dorso affixae quasi inferius et superius anthera distincta, in medio enim contracta, geniculata, reflexa, proximatis geniculis in formam crucis, margine antico farinifero

154 PLANTAE HISPANICAE.

farinifero, excepto in medio geniculo ubi nullum pollen.

PIST. *Germen* quadripartitum, in fundo calycis. *Stylus* setaceus, flaminibus longioribus paulo brevior. *Stigma* acutum, quadripartitum, laciniis inaequalibus. *Glandula* sub latere germinis inferiore.

PER. *Calyx* immutatus.

SEM. quaterna, teretiuscula, glabra, erecta.

150.

*Color* corollae purpureo-caeruleus, labio inferiore macula majori pallide alba.

In variis differt a *Brunella vulgari*, praesertim in corolla. *Stigma* quadripartitum etjam singulare quid.

II. ANGIOSPERMIA,

SIBTHORPIA.

34. SIBTHORPIA *europaea*.

*Habitat* in Portugallia ubi ad Porto legi copiosam ad basin murorum et monticulorum, aqua stillitante perpetuo madentium; et ad arcem Reginae Lusitaniae Centra, in monte altissimo proxime adjacente; in antropis aridis.

*Facies*

PLANTAE HISPANICAE. 155

*Facies* Hydrocotyles vel Chrysofplenii repentis.

*Radix* fibrosa, annua.

*Radicalae* tenuissimae, fibrosae, ex radiculis caulibus repentis descendunt.

*Caulis* repens, teres, pubescens, palmaris circiter, simplex vel ramosus.

*Rami* si adsunt, pauci, confimiles.

*Folia* alterna, subrotundo-reniformia, petiolata, margine quinque l. septemlobata: lobis omnibus obtuse rotundatis; pilosa: pilis hyalinis, distinctis, sparsis.

*Petioles* teretes, pilosi, folio longiores, ascendentes ex singula ala 1, 2, 3, 4.

*Flores* solitariae ex alis geniculorum, ante florescentiam erecti, postea deflexi.

*Pedunculus* communiter brevissimus, vix calycis longitudine, teres, pilosus, post florescentiam deflexus sub caule.

*CAL. Perianthium* monophyllum, turbinatum, hispidum, quinquefidum persistens: laciniis erectis, hispidis pilis quasi laceratis.

*COR. Petalum* unicum, regulare (quantum adhuc vidi) ad basin ferme aequaliter quinquefidum: laciniis subrotundis, concavis, calyce leviter brevioribus.

*STAM. Filamenta* quatuor, tenuissima, brevia, 15 l. quorum duo invicem propius approximata.

*Antherae*

*Aniherae* magnae cordato-oblongae, erectae, corolla paulo breviores.

**PIST.** *Germe*n parvum, subrotundum, compressum, apice sursum sericeo-pilosum, pilis longiusculis. *Stylus* staminum longitudine, cylindricus, brevis, pilis Germinis totus obtectus. *Stigma* capitatum, depressum simplex.

**PER.** *Capsula* subrotunda compressa, biventricosa, lateribus acutis, utrinque medio sulco impresso (*Veronicae* omnino) bilocularis: Receptaculo feminum implente fere loculos unde feminum unum simplex stratum.

**SEM.** nonnulla, subrotundo-oblonga, hinc convexa, inde plana, nigra.

*Flos* omnium minimus, vix nudo oculo examinandus, hinc numerus Staminum difficulter eruitur.

Mihi tamen constat ex pluribus examini subjectis hanc quaternarium esse, ideoque ad Cl. Didynamiae pertinere, licet Stamina duo vix notabiliter longiora, quod etiam videre est in *Limosella*.

Petali laciniae sibi externe incumbunt, margine dextro supra sinistrum s. contra motum solis.

OROBANCHE.

35. OROBANCHE *major* caule simplici, bracteis lanceolatis flore majoribus.

Orobanche flore minore. *Tournef. inst.* 170?

*Habitat* supra radices Ulmorum in horto regio ad Aranjuez.

*Radix* brevis, fibrosa, ex basi caulium tuberosa, interdum plures jungens caules.

*Caulis* simplex, rectus, spithamali-pedalis, teres, leviter pubescens.

*Folia* nulla, nisi squamae lanceolatae, acutae, alternae, sparsae.

*Flores* in spica rara, terminali, caulis medium superius occupante.

*Bracteae* lanceolato-acutae, corollae longitudine.

CAL. *Perianthium* diphyllum, laterale: foliis lanceolatis, acutis, angustis, apice in floribus superioribus bifidis, corolla paulo minoribus.

152

COR. tubulata, ringens, curva, tubo inferius tereti, superius dorso carinato. *Limbus* bilabiatus, subaequalis.

*Labium superius* bifidum: laciniis inflexis, crenulatis, obtusis, brevissimis. *Lab. inferius* trilobum, recto-dependens: laciniis

laciniis lateralibus tridentato-acuminatis, intermedia subrotunda paulo majore crenulata.

*Nectarii* squama minima ad basin anteriorem germinis.

STAM. *Filamenta* quatuor, tubo antice affixa, curva, corollae longitudine, in fauce eminentia. *Antherae* subcordatae, distinctae.

PIST. *Germen* oblongum, acutum. *Stylus* filiformis. *Stigma* capitatum, subquadratum, cum fulco in medio, nutans.

PER. - - -

SEM. minutissima.

*Color* Corollae flavo-pallidus, dorso obicure purpurascens, limbo flavo-pallido. *Color* Plantae fuscus.

Nullum odorem peculiarem offendi.

36. OROBANCHE *cernua* caule simplici, corolla incurva bracteis deltoidibus longiore.

*An* Orobanche lusitanica, flore atro-purpureo.

*Tournef. inst.* 176?

*An* Orobanche subcaeruleo flore sive *ii. Clus.*

*Tournef. loc. cit.?*

*Habitat* ad Aranjuez supra radices *Artemisiae* campestris erectae, odore *Carlinae*; in campis sterilissimis.

*Radix* e tubere oblongo baseos caulis.

*Caulis*

PLANTAE HISPANICAE. 159

*Caulis* simplicissimus, erectus, teres, spithamalis, glaber.

*Folia* nulla, sed Squamae oblongae, vagae.

*Flores* in spica, ultra medium Caulis occupant, sessiles, rariusculi.

*Braeae* deltoidae, acuminatae, paulo convexae, corolla breviores.

**CAL.** *Perianthium* diphyllum, laterale, bractea paulo brevius: foliolis ovatis, acuminatis: inferiorum florum simplicibus, superiorum plerumque bifidis. 153.

**COR.** monopetala, ringens, tubulosa, calyce duplo longior, arcuatim curva, sinu subtus subrecto quasi infracta. *Tubus* basi ventricosus, teres, sursum compresso-triangularis, dorso carinato. *Limbus* brevissimus, quinquefidus, bilabiatus, aequalis quasi longitudinis. *Lab. superius* bifidum, compressum: laciniis rectis, obtusis (non inflexis). *Lab. inferius* trilobum, planum: laciniis transversim oblongis; lateralibus brevissime acuminatis; intermedia subcrenulata; marcescens.

*Nectarium* Squama subglandulosa, ab anteriore parte basi Germinis, adpressa, transversim oblonga, convexa.

**STAM.** *Filamenta* quatuor, subulata, tubo anteriore affixa, ascendente, sursum incurva, extra

extra corollam non prominentia. *Antherae* oblongae.

*PIST.* *Germen* oblongo-acutum. *Stylus* filiformis, sursum incurvus. *Stigma* capitatum, transversale, bilobum, obtusum, nutans.

*PER.* - - -

*SEM.* minutissima.

*Color* corollae albo-pallidus, dorso tubi ad roseo-pallidum inclinans: Limbi faturate purpureus s. violaceus.

Differt a priori:

Bracteis deltoidibus corolla minoribus.

Corollae tubo basi ventricosiore; superius insigniter incurvo.

laciniis limbi integerrimis.

labii superioris erectis: inferioris aequalibus.

Staminibus et Pistillo non extra florem prominentibus.

Nectarii squama optime conspicua.

Plantae colore pallido, superficie glabra, nec non colore Floris.

## TETRADYNAMIA.

## SILICULOSA.

## LEPIDIUM.

37. **L**EPIDIUM *cardamines* foliis radicalibus pinnatis, caulinis ovatis basi inciso-pinnatifidis.

*Habitat* ad Cienpozuelos ad margines viarum copiose, ad Aranjuez rarius locis argillofis, aridis.

*Radix* crassa, perennis, profunde descendens.

*Caules* plerumque diffusi, interdum erecti, comosi, a biunciali usque ad pedalem longitudinem alti, plures ex una radice vel foliarii secundum locum, teretes, ramosi, praefertim superius, ramis inferioribus brevioribus.

*Folia radicalia* in orbem sparsa, procumbentia, primo vere vigent, mox exorto caule exciscantur, pinnata cum impari: pinnis oppositis, distinctis, sessilibus, subrotundo-reniformibus: lobo antico juxta insertionem in petiolo communi inciso-fulcato linea curva

superius impressa; foliolo terminali duplo majori, subrotundo-ovato, basi levissime emarginato.

*Caulina inferiora* plerumque pinnata, familia radicalibus, sed minora paucioribus (3. circ.) pinnis, petiolata.

*Caulina superiora* sessilia, basi divisa in lobos acutos, parvos: terminali majori subrotundo, in summis vero ovato-acuto, basi utrinque inciso vel saepe auriculato.

*Flores* more familiae in corymbis longe racemosis, copiosi, diutius persistentes, pedicellis patulis.

*CAL. Perianthium* tetraphyllum, patens, breve, foliolis lateris plani lato-linearibus, brevibus quasi subrotundis, apice convexo gibbis; lateris compressi linearibus, longitudinaliter convexis.

155. *COR.* tetrapetala, compressa. *Limbo* patente, albo; *Ungues* erecti, calycis longitudine, sensim dilatati in Laminam subrotundam patentem.

*STAM. Filamenta* sex, unguibus corollae paulo altiora, quorum duo quasi longiora.

*PIST. Germen* subrotundum, compressum, corolla altius. *Stylus* nullus. *Stigma* simplex.

*PER. Silicula* ovato-subrotunda, compressa, apice

pice acute sed levissime emarginata: valvulis dissepimento contrariis.

SEM. parva, oblonga, compressa, folitaria singulo loculamento.

*Color* Corollae albus, Stamina et Germinis fuscus. Corollae diutius persistunt albae, sed color genitalium, mixturam non injucundam efficit.

38. LEPIDIUM *nudicaule*, caule nudo simplicissimo, floribus tetrandris. *Linn. Sp.*

Nasturtium minimum vernalis, foliis tantum circa radicem. *Magn. monsp. 187. f. 186.*  
(bona, sed rudis).

*Habitat* in campo elevato nudo supra monasterium St. Bernhardi, Madriti, primo vere.

*Radix* simplex, annua, descendens, demum fibrosa, ramosa.

*Caulis* nudus, simplex, uncialis saepius vix ultra (seu Scapus radicans, erectus, teres, glaber).

*Folia* omnia linearia, dentato-sinuata, acuta, procumbentia.

*Flores* sub florescentia corymbosi, demum elongantur in racemum laxum.

*Pedunculi* copiosi, erecti, post florescentiam patentissimi.

CAL. *Perianthium* tetraphyllum, deciduum:

foliis subrotundis, obtusis, concavis, patentibus.

COR. *Petala* quatuor, cruciformia, aequalia, patentia. *Ungues* lineares sensim aucti in Laminam obtusam, calyce longiorem.

156 STAM. *Filamenta* quatuor (desunt ambo minor), ad latus planum Germinis erecta, ad basin a parte interiore aucta *Glandula* compressa, lata, depresso-scula, alba. *Antherae* ovatae, compressae a dorso anticeque.

PIST. *Germen* subrotundum, planum. *Stylus* nullus. *Stigma* simplex.

PER. *Silicula* compressa, planiuscula, subrotunda, margine undique acuto, apice vix manifeste emarginata, subtus ventricosior, supra magis plana, bilocularis, dissepimento angusto.

SEM. - - -

*Color* plantae viridis, sed saepe fuscus, praesertim scapi versus flores; calycis color fuscus, Petalorum albus ut et glandularum. *Antherae* lutescentes. *Germen* fuscum. *Siliculae* nigro-fuscae.

MONADELPHIA.

POLYANDRIA.

MALVA.

39. **M**ALVA *hispanica* foliis palmato-incis, caule procumbente; calyce exteriori diphyllo.

*Habitat* in campis juxta Aranjuez versus Yepes et Ocana, juxta viam.

*Radix* descendens, recta, lateraliter fibrillosa, sat longa.

*Caulis* plures, procumbentes, adscendentes (in angustiis inter fruticulos *Artemisiae campestris* et *Salsolae vermiculatae*), subrecti, teretes, subscabri ex punctulis piliferis, pilis procumbentibus.

*Folia radicalia* et caulis quinque vel tripartito palmata: lobis linearibus sursum latioribus, saepius iterum singulis trilobo-incisis.

*Caulina* ultima et subfloralia, saepius enim stipulis conjuncta, tripartita.

*Stipulae* binae, lineari-acutae. *Petioli* folio paulo longiores.

*Flores* solitarii, axillares, pedunculo folia excedente.

CAL. *Perianthium exterius* diphyllum: foliolis lineari-fetaceis, subhirsutis, ab exteriori parte calycis fitis.

*Perianthium interius* femiquinquefidum, pentagono-pyramidatum, laciniis acutis; margine recto subpubescens.

COR. malvacea, calyce interiore sesqui longior, petalis obtusis, late emarginatis.

158. STAM. *Filamentum* cylindricum, columnare, apice fissum in plura.

PIST. Malvae. *Germen* depresso-orbiculatum. *Stylus* unicus, apice decempartito in fila. *Stigmata* simplicia.

PER. *Capsulae* decem, in rotam orbicularem depressoae, more malvae.

*Centro* parvo, brevi, conico.

SEM. reniformia, solitaria.

*Color* floris purpureo-pallidus, vel paene albus.

*Alteram* varietatem non infrequentem offendi, simillimam huic descriptae; sed distinctam foliis quasi profundius partitis, calycis laciniis brevioribus et latioribus,

tioribus, corolla parva, calyce minore; Capsulis 11 circ. calyce paulo pilosiore; sed absque dubio erit sola varietas, ut quoque observavi in Malva rotundifolia. Fl. Suec. 580. Jam floribus parvis, uti in Suecia communiter, jam calyce triplo quadruplove majoribus purpureis, quae varietas hic Madriti vulgatior observatur.

## SYNGENESIA.

## POLYGAMIA AEQUALIS.

## ECHINOPS.

40. **E**CHINOPS *strigosus* calycibus capitatis :  
lateralibus minoribus : squamis ciliatis  
corollae laciniis linearibus laxis.

Carduus tomentosus, capitulo minore. *Bauh.*  
*pin.* 82.

Echinopus tenuifolius violaceus. *Tournef. inst.*  
463. *Juss. Barr.* 1028.

Carduus sphaerocephalus tenuifolius violaceus.  
*Barr. ic.* 144.

*Habitat* in collibus apricis cis saltum vulgo fo-  
to Luzon Madriti cum Atractylide humili.

*Radix* simplex, descendens, filiformis, annua  
ni fallor.

*Caulis* erectus, simplex, rarius bini ex radice,  
erecti, digitales usque pedales, tomento ad-  
presso tenui tenaci involuti.

*Folia radicalia* pinnata : pinnis oppositis, den-  
tato-spinosis.

*Caulina inferiora* et media pinnatifida : la-  
ciniis

PLANTAE HISPANICAE. 169

ciniis lanceolatis, integris, apice acuto-spinosis; supra pilis rigidis deprefis, subtus ex toto tomentosa.

*Caulina summa* lanceolata dentata, dentibus spinulis acutis armatis.

*Flores* in capitulum subrotundum, laxiusculum, solitarium, terminale congesti.

*Receptaculo* globofo, nudo, hinc inde pilis referto; *floribus lateralibus* seu inferioribus minoribus, sterilibus.

*CAL.* *communis* omnium calycum nullus, nisi pili reflexi ad caulis summum.

*Proprius* quinquefariam imbricatus, quinqueangularis: squamis subulatis, basi latioribus: infimis ovato-lanceolatis, 16c. ciliatis; superioribus longioribus, apice subconduplicatis, medio margine ciliis paucioribus sed longioribus, omnibus apice contra motum solis flexis.

*Calyx* basi pilorum fasciculo copioso involvitur.

*COR.* solitaria singulo calyci; tubulata: *Tubus* filiformis, quinqueangularis, calyce dimidio brevior. *Limbus* quinquepartitus, laxus, tubo sesqui longior, hinc calyce altior: laciniis linearibus, angustis, flaccidis s. laxis.

*STAM.* *Filamenta* quinque, tubi apice inserta, Limbi

Limbi  $\frac{1}{4}$  longitudinem alta, filiformia. *Antherae* cylindricae, basi pentagonae, apice contractae, quinquedentatae; dentibus linearibus, basi intus exferente setas decem, duas singulo filamentum.

*PIST.* *Germen* oblongum, truncato-pentagonum, corona ciliata. *Stylus* antherae circiter longitudine. *Stigma* acutiusculum, simplex.

*PER.* *Calyx* immutatus.

*SEM.* unicum, oblongum, pentagonum, magnum, truncatum, coronatum Corona pilosa, ciliata, brevi, pentagona: nucleo bifido, corculo in basi.

*Color* corollae Tubo Limboque inferius albescente. Limbus apice et squamae calycinae apice sub florescentia saturate caeruleo-purpurea.

Absque dubio erit distincta species ad *Echinope Sphaerocephalo.* *Hort. Ups.* 248.: 1. Videor mihi recordari has differentias; quod nempe major gaudeat statura multo proceriore foliisque viscosis, quod capitulum florum sit exacte globosum, calycibus omnibus ejusdem magnitudinis; omnibus fertilibus; quod Corollae limbus aequaliter patens, brevior et sub florescentia

centia Corollae cooperiant totum capitulum, adeo ut calyces non appareant, nec supra emineant, etc.

Nec erit Echinops Ritro H. Upf. 248. :  
 2. quia squamae calycinae ciliatae sunt, et cum planta Hort. Upf. sit ruffica. Vaillantius conjungit species 6 Tournefortii sub tribus speciebus in Actis gallicis.

A T R A C T Y L I S.

41. ATRACTYLIS *humilis* flore radiato, squamis calycinis truncatis cum spinula fetacea. 161.

*Habitat* in collibus altis cis saltum vulgo foto Luzon Madriti.

*Radix* simplex, filiformis, pennae columbinae crassitie.

*Caulis* unicus, digitalis, vel in majoribus bini vel tres spithamales et semipedales, simplices, erecti, teretes substriati, tomento albo tenuissimo adpresso involuti, ex toto foliis copiosis vestiti.

*Folia* alterna lanceolata, subconduplicata, spinosa: spinulis brevibus, rigidis, ad singulum dentem extrorsum pro more carduorum varie vergentibus; glabra, viridia, nervo

nervo medio solummodo tomento depresso  
vestito.

*Flos* unicus, sessilis, cauli terminalis, basi ob-  
volutus foliis aliquot patulis, similibus cau-  
linis, sed inferius angustioribus.

CAL. communis crasso-ovatus, imbricatus:  
squamis, oblongis, obtuse truncatis, acu-  
mine fetaceo spinoso, rigido, recto, simpli-  
ce terminatis.

COR. multiplex, copiosa, radiata: flosculis  
Disci tubulatis; Radii lingulatis; omni-  
bus hermaphroditis. *Corollae* Disci tabu-  
latae; *Tubus* cylindricus, sursum paulo  
crassior levissime curvus. *Limbus* erectus,  
quinquefidus: *lacinia* una exteriore pro-  
fundius distincta. *Corollulae* RADII novem  
vel decem; *Tubus* filiformis, angustior tu-  
bo Corollularum disci. *Lingula* patens,  
tubi longitudine, extrorsum latior, plica-  
tula, profunde quinquepartita: laciniis an-  
gustis, linearibus: lateralibus profundius  
divisis.

STAM. *Filamenta* quinque glabra, medio tubo  
adnata. *Anthera* cylindrica, corollula bre-  
vior, apice obsolete quinqueidentata, basi  
introrsum setas decem exserente (ut in Car-  
dus, reliquis communiter). In radio simil-  
lima,

PLANTAE HISPANICAE. 173

lima, sed Anthera angustior, apice profunde quinquefida.

Pist. disci et radii simillima. *Germen* tomentoso sericeo adpresso involutum. *Stylus* filiformis, anthera longior. *Stigma* subcapitatum.

PER. *Calyx* immutatus femina continet.

SEM. oblonga, paulo compressa, tomento sericeo seminibus longiore omnino involuta, coronata *Pappo* longo, pennato: pennatura ad basin et apice copiosiore.

REC. planiusculum, refertum *paleis* interstinctivis, subconnatis, laciniatis: laciniis fetaceis, calycis longitudine.

*Color* flosculorum amoene caeruleus, ut et paleae apicibus eodem gaudent colore.

Sero floret.

42. ATRACTYLIS *cancellata* flore radio nudo, calyce inermi involucrio connivente obrecto.

Atractylis foliis linearibus dentatis, calycibus conniventibus. *Hort. Cliff.* 395.

Cnicus exiguus, capite cancellato, femine tomentoso. *Tournef. inst.* 151.

*Habitat* in collibus apricis Madriti et ad St. Fernando.

*Radix*

*Radix* annua, sat profunde vero descendens, tenuis fibrosa.

*Caulis* brevis vix ultra unciam unam vel alteram longus, saepe semuncialis vel simplex, erectus vel ramosus ex radice, ramis caule longioribus, procumbentibus, paucis, terebibus, tomento parvo incanis.

*Folia* alterna, linearia, acuta, lateribus inaequaliter sed molliter spinulosa, superficie tomentosa, saepius conduplicata.

*Flores* solitarii, sessiles, terminales cauli et ramis (si adsunt.)

*Involucrum* polyphyllum, rigidum, in figuram ovato-subrotundam connivens laxè includit calycem: foliolis rigidis, curvis, linearibus, acutis, interius convexis glabris, exterius planiusculis margine extante spinuloso: spinis rigidiusculis non vero pungentibus, bifidis patentissimis.

**CAL.** communis ovatus, glaber, imbricatus squamis lanceolato-acutis vel interioribus linearibus, arctissime inter se ope tomentuli cohaerentibus, intimis linearibus, acutis, longioribus, membranaceis, erectis; omnibus inermibus.

**COR.** multiplex in totum novem vel decem flosculorum, tota hermaphrodita, calycis longi-

PLANTAE HISPANICAE. 175

longitudine, sed sub florescentia quoque pappo calyce longiore vestita: corollulis omnibus aequalibus.

*Corollulae* tubulatae, sub florescentia pappo suo breviores, filiformes, aequales. 163

*Limbus* aequalis crassitie, erectus non patulus, quinquefidus: laciniis acutis.

STAM. *Filamenta* quinque, tubo secundum longitudinem adnata. *Anthera* longa, cylindrica, sed limbo brevior, apice quinque-dentata, basi foras denticulos decem (unum utrinque ad singulum filamentum), acutos, fetaceos exserens.

PIST. *Germen* oblongum, copioso tomento vel lana erecta sericea germine longiore tectum.

*Stylus* anthera longior, filiformis. *Stigma* simplex, obtusum.

PER. *Calyx* immutatus.

SEM. sericeo-lanata, coronata pappo erecto, plumoso, basi quasi monophyllo, longo.

REC. inaequale, paleaceum; paleis ubique basi inter se connatis, varie laciniatis, lacinulis saepe fetaceis.

*Color* flosculorum purpureo-caeruleus, sed flos pappo semper praegnans fructifer videtur.

Floret Julii initio.

Licet radio careat species haec, summo tamen jure genus *Atractylidis* videtur intrare

intrare posse ob (a) faciem (b), involu-  
 crum (c), Semina (d), pappum  
 et (e) maxime receptaculum, quibus  
 notis antecedenti speciei bene conve-  
 nit, solam differentiam agit radius ex-  
 clusus: et pappus flore longior, calyx-  
 que inermis.

## POLYGAMIA SUPERFLUA.

## COTULA.

43. COTULA *aurea* foliis pinnatis fetaceis,  
 caulibus procumbentibus.

Chamaemelum aureum peregrinum, capitulo  
 sine foliis. *Bauh. hist. 3. p. 119. fig. bona.*

Chamaemelum luteum, capitulo aphylo. *C.*  
*Bauh. pin. 135. Tournef. inst. 494.*

*Radix* alba, simplex, dein fibrillosa, sat pro-  
 funde descendens, annua.

*Caules* plures ex radice, procumbentes, tereti-  
 usculi, glaberrimi, digitales et spithamales  
 ramulis brevibus.

*Folia radicalia* in orbem profusa, pinnata: pin-  
 nis fetaceis, bi trive ramosis, brevibus, gla-  
 bris.

*Caulina* alterna sessilia, simillima.

*Flores* subglobosi, solitarii, terminales cauli et  
 ramulis.

CAL.

PLANTAE HISPANICAE. 177

CAL. *communis* hemisphaericus, subangulatus  
foliis subaequalibus, duplicis seriei: exte-  
rioribus paulo longioribus dorso crasso con-  
vexo, auctis lateribus membranula fusca,  
tenui, obtusa; interioribus brevioribus, la-  
tioribus, obtusis, membranula minori.

COR. composita, uniformis, tubulosa, elevate  
hemisphaerica.

*Corollulae disci* copiosae, hermaphroditae:  
*tubo* brevi, dorso compresso, quadri-  
fariam ventricoso; *Limbo* erecto, subtubulato, longitudine tubi: ore obtuso, quadridentato.

*Corollulae radii* femineae, aequalis cum  
ceteris altitudinis: tubo simillimo;  
limbo erecto, interius bifido.

STAM. quatuor syngenesiae; in radio nulla.

PIST. *Germen* oblongum, corollulae magnitu-  
dine. *Stylus* erectus, corollula brevior *Stig-  
ma* simplex, obtusum, truncatum.

*Flosculis* femineis *Germen* sumillimum.

*Stylus* erectus, filiformis, corollulae  
longitudine, superne bifidus. *Stigmata*  
obtusa, paulo divaricata.

PER. nullum. *Calyx* immutatus.

SEM. oblongo-linearis, teretia; dorso convexo,  
striato, apice gibbulo; antice quasi tetra-  
gona; angulis obsolete. Corona nulla.

178 PLANTAE HISPANICAE.

REC. conicum nudum.

*Vaillantius in act. parif. 1720 p. 317. n.*

I. facit plantam hanc varietatem Chamamelis nobiliss. s. Leucanthemi odoratioris C. Bauh. sed nostra planta est revera distincta et quod radio cretat et quod flosculis quadrifidis donata sit.

165. POLYGAMIA NECESSARIA.

F I L A G O.

44. FILAGO *pygmaea.*

Gnaphalium roseum sylvestre C. Bauh. pin.

263.

Filago maritima, capite folioso. *Tournef. inst.*

454.

Santolina caule simplicissimo, foliis superioribus majoribus. *Roy. Lugdb. 147. 7.*

*Habitat* vulgaris per colles ad St. Ybes, Lisbon, Estremadura, Madrit.

*Radix* descendens, simplex, tortuosa, lateraliter fibrosa, ferruginea, planta ipsa saepe longior.

*Caulis* interdum fere nullus, quasi acaulis, alias communiter brevissimus, simplicissimus, foliis omnibus imbricatis obtectus, superius triplo

triplo crassior ob flores plures eodem loco sessiles. Caules locis fertioribus nati semper sunt superius ramosi, ramis patulis in rosam; foliis imbricatis, summis majoribus, extrorsum semper majoribus interioribus reliquis.

*Folia* copiosa, arctissime imbricata, patula in rosam inferiora, superiora sensim majora, omnia linearia, obtuse acuta, tomentoso-incana, inferius tomento laxo sibi invicem adhaerentia.

*Flores* terminales, sessiles in centro s. rosae foliorum medio. Variant alii minores, alii majores sparsi.

*CAL.* communis proprie nullus, sed *paleae* aggregatae calycem quasi constituunt.

*COR.* composita multiplex, ex floribus feminis per totum receptaculum, in centro paucis flosculis hermaphrodito-masculis.

*Hermaphroditae corollulae* numero septem ad decem circiter, confertae absque paleis interstinctivis: tubo filiformi palearum circumambientium circiter longitudine: *Limbus* erectus, tubo levissime amplior, apice quadridentato: dentibus linearibus, erectis.

*Femineae* copiosissimae, singulae intra singulas paleas: corollulae filiformes, angustis.

angustissimae apice bifidae, vix observabiles.

166. STAM. Hermaphr. *Filamenta* quatuor, parva, capillaria, tubo adnata supra medium. *Anthera* cylindrica, corollula paulo minor, apice quadridentata, dentibus linearibus longiusculis, basi intus ad singulum filamentum denticulis subulatis, utrinque solitariis parvis notata.

*Femin.* nulla omnino.

PIST. Hermaphr. *Germen* vix ullum, certe angustissimum, minimum. *Stylus* *Antherae* altitudine, simplex. *Stigma* acutum, bifidum.

*Femin.* *Germen* ovatum, majusculum, antice dorsoque compressum. *Stylus* filiformis, paleis paulo brevior. *Stigma* acutum, bifidum.

PER. nullum. Congeries flosculorum immutata.

SEM. *Hermaphroditis* nulla, abortiunt. *Feminis* compressa, obovata, glabra, parva. *Pappus* omnino nullus.

REC. filiforme, cylindricum, sursum attenuatum, totum paleis obtectum copiosis, imbricatis; summo apice intus nudum absque paleis, ferens flores hermaphrodito-masculos,

PLANTAE HISPANICAE. 181

los, qui comprehenduntur calyculo ex paleis  
summis constituto, polyphyllo.

*Paleae* sensim longiores et angustiores, a-  
pice acuto, setaceo, revoluta; medio  
dorso linea fusca notantur, alias mem-  
branaceae albentes.

*Color* corollularum hermaphrod. vire-  
scens.

Pertinet itaque secundum suos flores ad  
syngenesiam Polygamiam necessariam  
et videtur proprium et singulare genus  
constituere. Nullo modo ad Gnapha-  
lia l. Elichrysa T. V. accedet, nec  
perspicio affinitatem cum Santolina.

M I C R O P U S.

45. MICROPUS *erectus* seminibus compressis  
lanatis inermibus.

Leontopodium verius Dioscoridis. *Barr. ic.*  
296.

Filago supina, capitulis rotundis tomento ob-  
fitis. *Juss. Barr. n. 999.*

*Habitat* Madriti, ad margines collium passim,  
ad Cienpozuelos ad margines agrorum et  
cum Filagine vulgari.

*Radix* annua descendens, fibrosa, simplex.

*Caules* plures vel solitarii; erecti, ascen- 167.

dentes vel diffusi ratione folij tenui tomento laxo vestiti; *rami* patuli, saepe dichotomi.

*Folia* lanceolata, obtusiuscula, inferius attenuata, sessilia (spathulata); alterna, tomentosa.

*Flores* sessiles, solitarii vel plures ex alis foliorum et ramorum, in globis rotundis valde tomentosus f. lanatis.

*CAL. inferior* obsoletus, tetraphyllus, patens, laxus: foliolis angustissimis, acutis: foras et lateribus tomentosus, interius glabris. *Inferior* maximus, 7-9 phyllus: foliolis situ laxis, distinctis, galeato-compressis: margine exteriori semicirculari; interiore in aciem rectam nudam rima angustissima aperta compresso; foris undique tomento copiosissimo f. lana tectis.

*COR.* communis ex masculis 1, 2-3 in centro et femin. 7-9 in ambitu: *masculis* corollula tubulata, minima, quinquentata absque subjecto Germine. *Feminis* nulla.

*STAM.* masculis *Filamenta* quinque. *Anthera* cylindrica, apice conica. *Feminis* nulla.

*PIST.* masc. nullum. *Femin.* *Germen* obovatum, compressum, glabrum, inclusum intra singula foliola calycis interioris. *Stylus* setaceus, media parte superiori bifidus. *Stigmata* simplicia.

PER. nullum. Folia calycina interiora includunt femina, decidunt.

SEM. solitaria, compressa, obovata, margine interiore rectiore, vestita foliolis calycinis induratis, lanatis.

REC. filiforme, elevatum, in tubercula columnaria divisum pro flosculis femineis, apice praebens flosculos masculos absque paleis.

*Nux* globosa, glabra, apicē cicatricula ro-  
tunda notata (non exquifite triangulari ut  
Tournefortius pingit.)

SEM. *Nucleus* unicus, globosus, totum Pericar-  
pium replens, albus.

Flores *masculi* in diversa planta copiose  
florifera.

CAL. ut in altero sexu.

COR. ut in priore, et

STAM. ut in Hermaphrodito.

PIST. omnino nullum.

Color

PLANTAE HISPANICAE. 187

Color floris viridis ad luteum levissime inclinans.

Odor suavissimus, replens saepe vicinia fragrantia sua, praesertim frutices masculi copiosissime florentes.

Ergo videtur jure suo postulare Classem Polygamiae Dioeciae. Expectabo adhuc finem florum hermaphroditorum.

## CLASSIS XXIII.

## POLYGAMIA.

## MONOECIA.

## ANDROPOGON.

48. **A**NDROPOGON *hirtum* spicis conjugatis, calycibus hirsutis. *Roy. lugdb.*

5351.

*Habitat* in Portugallia, legi ad Urbem Porto in montibus arenosis praeruptis.

*Radix* fibrosa, fibris crassis, filiformibus: fasciculum magnum foliorum et nonnullos culmos emittens.

*Culmi* geniculati: geniculis omnibus paulo infractis, versus radicem magnis approximatis, magno fasciculo foliorum antiquorum obtectis, superne subaequali spatio remotis, glaberrimis, ex geniculis fascialis ramulosi, praesertim ex superioribus.

*Ramuli* unico geniculo paulo infracto in medio instructi, ex geniculis inferioribus solitarii: ex suprema vero vagina plures egrediuntur.

*Folia*

PLANTAE HISPANICAE. 189

*Folia* graminea, glauca, angusta, culmorum  
tertiam partem aequantia; superiora bre-  
viora.

*Vagina* longa, glabra striata, geniculis  
ramiferis ampliuscula, vix amplectens  
culmum, summa vagina plures inclu-  
dens ramulos, ceteris magis ventricosa  
et laxa.

*Membranula* ovata, acuta, ad basin pilosa:  
pilis raris, longis.

*Spicae* binae terminales singulo ramulo; qua-  
rum altera sessilis, altera brevis pedunculata;  
pilosae, compositae floribus hermaphroditis  
et masculis in alterno denticulo, quorum  
hic pedunculatus et muticus, ille sessilis et  
longe aristatus est:

*Floris* sessilis hermaphroditi:

*CAL. Gluma* bivalvis, uniflora: *valvulis* ob-  
longo-lanceolatis, membranaceis, convoluto-  
concavis: extus pilis sericeis undique ob-  
tectis.

*COR. Gluma* bivalvis: *valvis* angustis lineari-  
bus, planis membranaceis, tenacissimis, obtu-  
sis, calyce brevioribus, quarum altera apice  
exferit *Aristam* longitudine spicae s. ultra se-  
muncialem, nudam, tortam (ob angustissi-  
mam glumam videtur arista oriri ex ipso  
recepta-

190 PLANTAE HISPANICAE.

receptaculo, inferius tantummodo tenuis  
(membranacea.)

STAM. *Filamenta* tria, brevia. *Antherae* ob-  
longae, lineares.

PIST. rudimentum non vidi.

*Floris* masculi pedunculati.

CAL. consimilis.

COR. consimilis, sed glumis aequalibus, muticis.

STAM. consimilia.

Scheuchz. 95 : n. 2. sat bene describit  
plantam, at fructificationem non item ;  
nam calyx est bivalvis, cujus unam  
valvulam facit corollinam, quod vix  
opus est, cum adsint binae valvulae co-  
rollinae, etiam in floribus muticis. In  
floribus aristatis aristas describit prae-  
ter valvulam corollae angustam, quae  
revera est gluma basi apice exferens a-  
ristam.

CENCHRUS.

49. CENCHRUS *capitatus* spica ovata simplice

*Roy. lugdb.* 71 : 1.

Gramen montanum echinatum tribulojides ca-  
pitatum. *Column. ecphr.* I. p. 340.

*Habitat* in collibus Madritensibus.

*Radix* fibrosa, multiplex, fibris longis, annua.

*Culmi*

PLANTAE HISPANICAE. 191

*Culmi* digitales, glabri, stricti, geniculis duobus ad radicem ubi leviter inflexi; articulo ultimo erecto, longissimo, nudo.

*Folia* graminea, uncialia, subpubescentia, plana, acuminata.

*Vagina* angulata, striata, integra, dorso saepe carinata. *Membracula* albida, membranacea, laciniata, acuta.

*Flores* in spica ovato-subrotunda, spinoso-echinata, terminali, ad basin squamis acutis, membranaceis, minutissimis involuta, floribus omnibus sessilibus.

*CAL.* *Gluma* bivalvis: valvulis oblongis, acuminatis, membranaceis, planiusculis, subaequalibus, dorso carinato, crassiore. 173-

*COR.* composita, biflora, hermaphrodita (non polygama), alterave levissime pedicellata, biglumis, non sub florescentia hians: *valvula exterior* majore, involvente interiorem, striata, dorso convexa, truncata quasi, terminata margine in aculeos quinque, patentes, validos, medio longiore: *valvula interior* augustiore, aequalis longitudinis: dorso plana, truncata, aculeis duobus corniculata, minoribus quam in gluma exteriori.

*STAM.* singulis flosculis tria, *Filamentis* fetaceis, corolla longioribus. *Antherae* ovatae, basi dehiscentes, bifidae.

PIST.

Pist. singulis flosculis *Germen* obovatum f. turbinatum, basi ultra medium glabrum, sursum obtusum pubescens. *Styli* duo, erecti (ob corollam semper clausam), glabri. *Stigmata* acuta, simplicissima.

PER. . . . .

Est singulare inter gramina proprie dicta, quod vagina sit integra nec marginibus obvolventibus se invicem. Nec possum bene referre hoc Gramen ad characterem Cenchri, nec flores hujus sunt Polygami, dissecui plures et inveni pistillum et in flosculo superiore et inferiore. Omnes plantae habitant in collibus Madritensibus.

C R Y P T O G A M I A.

A L G A E.

50. **FUCUS** *elongatus* dichotomus linearis  
compressus longiusculus.

*Habitat* in mari Anglico et Hispanico.

*Frons* longissima, aphylla, linearis, dichotoma, versus apices sensim angustior, glabromucida, plano-compressa, (longitudine 1, 2, ad 3. ped.)

Superficies punctis verrucosis non protuberantibus undique obtegitur, excepta infima parte ante dichotomias, ubi glabra punctis carens.

*Radix* parasitica? cingitur margine orbiculato, peltato crasso, patente.

Planta saepius solitaria, interdum duae vel tres ex uno loco oriundae.

*Color* in viva eleganter rubens, punctis pallidioribus.

Fucus hic exsiccatu contrahitur, corrugatur adeoque magis fungosus quam reliqui.

194 PLANTAE HISPANICAE.

*Substantia* valde tenax, extensibilisque.

51. FUCUS *abrotanifolius* pinnatus, ramis dichotomis, extremitatibus dilatato-vesiculosis.

*Habitat* in mari Anglico.

*Frons* brevis, palmaris et spithamea, linearis, compressa: ramis pinnatis.

*Rami* pinnatim subopposite exeunt e caule, copiosi, dichotomi, subdurissimi, versus extremitates sensim crassiores, more fere Plantae umbellatae.

*Vesiculae* copiosae versus apices ex ramulis dilatatis, confertae.

*Vesiculae glabrae* infra dichotomiam ultimam, ex ramulo ipso dilatato, saepe articulatae, s. plures sibi arte adjunctae, oblongae, cavae, glabrae.

175. *Vesiculae verrucosae* terminales, prioribus glabris arte supra dichotomiam ultimam approximatae, apice acuto, saepius bicorni: superna medietate verrucosae, inferna vero glabrae.

*Color* eleganter rubens.

C O N F E R V A.

52. CONFERVA fascicularis, capillamentis geniculatis simplicissimis brevissimis.

*Habitat* in mari Germanico copiose in Fuco spirali Fl. Sv. 1003. ex Doggen's bank extracto.

*Capillamenta*

*Capillamenta* tenuissima vix nudo oculo distinguibilia, simplicissima, brevia, fasciculatim innata verrucis frondium Fuci praedicti; optima lente considerata apparent geniculata (aliis microscopiis minoribus vix observantur genicula), geniculis brevissimis; tota vix unguem dimidium vel integrum longitudine attingit.

Color in antiquioribus viridis, in junioribus Confervis albidus.

*Frustrificationes* copiosae, pedunculatae, ex geniculis fere solitariae: pedunculo geniculis duplo longiore, tenuissimo: angulo recto patente.

*Calyx* turbinatus s. obovatus vel hemisphaericus, omnino pellucidus, tenerrimus ore integro vel integerrimo, intus cavus.

*Corpusculum* (an semen)? globosum, subopacum, intra calycem, in aliis fundo calycis, in aliis in ore, in aliis totum calycem opplebant, aliis calycibus illis carentibus.

 APPENDIX.

## L Y G E U M.

## NOVUM PLANTAE HISPANICAE GENUS.

 PARTUM herba alterum *Clus. hist. 2. p. 220.* diu inter Gramina obscuritate sepultum jacuit, nec quantum scio ab alio quodam Auctore antopta post Clusium descriptum fuit, nisi a solo Tournefortio, qui illud novo solum nomine indigitavit; adeo ut ad haec usque tempora accuratior notitia fructificationis inter desiderata fuerit, quam singularem esse ex spatha aliisque indiciis non obscure divinarunt Botanici. Mihi nuper visa planta, scrutatisque flore et fructu, Genus proprium et novum agnovi, cujus descriptionem subjicio.

## CHARACTER NATURALIS.

CAL. *Spatha* monophylla, convoluta, acuta, fructu maturo deorsum dehiscens persistens.

COR.

COR. germi in insidens, composita, biflora, *flosculis* aequalis situs, biglumibus, persistentibus.

*Gluma exterior* oblonga, acuta, convexa, minor.

*Gluma interior* linearis, angusta, membranacea, dorso plano, exteriore duplo longior, apice bifida, acuta.

STAM. (singuli *flosculi*) *Filamenta* tria, tenuissima, planiuscula, longa. *Antherae* lineares.

PIST. *Germina* sub receptaculo oblonga, singuli *flosculi* solitaria, *crusta* ambobus *flosculis* communi hirsuta biloculari comprehensa. *Stylus* unicus, simplex, planiusculus, longus. *Stigma* simplicissimum.

PER. *Crusta* oblonga, dura, tenax, integerrima, hirsutissima corponata corolla, bilocularis, non dehiscens.

SEM. scilitaria, lineari-oblonga, hinc convexa, inde planiuscula, semper clausa.

OBS. I. Notae Essentiales et particulares hujus generis mihi visae sunt.

1. *Calyx* Spatha.
2. *Germen* sub receptaculo, inter Corollam et Spatham.
3. *Semina* *crusta* non dehiscente biloculari praedita. 285.
4. *Glumae* structura graminearum sed *stylus* unicus.

OBS. II. *Crusta seminum* quidem nihil aliud est, quam continuatio glumae exterioris, illam tamen, cum integerrima, tenax et in subiecto hirsutissima sit (glumae glaberrimae sunt), credidi distincto titulo naturaliter tradendam esse, nec cum corolla conjungendam, quod affirmat quoque dissepimentum simplex membranaceum.

OBS. III. Videtur participare cum ambobus ordinibus naturalibus, nempe *Calamariis ord. XIII. et Graminibus ord. XIV.* licet calamariis proprior.

OBS. IV. *Lygeum* nominavi synonymo veteri Athenaei, quod derivatum fuit à graeco *λύγος*, vimen virga; vel *λύγω* flecto ob usum plantae.

SPECIEM unicam solum novi, cujus mentionem varii auctores fecerunt.

DESCRIPTIO SPECIEI.

*Radix* repens, fasciculata, filiformis, culmos et folia fasciculata in caespitem emittens.

*Culmi* teretes, filiformes, glabri, subnudi, unico articulo nudo supra medium vel versus apicem instructi, qui post florescentiam longe excrefcit, versus basin vero duobus tribusque articulis confertis, vagina tectis; spithamales usque bipedales

*Folia radicalia* copiosa, praeter culmos fructificantes caespitosa, tereti-filiformia, nempe acutissime convoluta f. conduplicata, glabra,

apparenter striata, culmorum altitudine, tenacissime basi pro situ altiori longius vaginata: *Vagina* arcte convoluta, similiter glabre striata, terminata membranula utrinque acuta, bifida, tenuissima. *Culmorum*

radi-

radicalibus simillima; *summum* brevius, 2-4  
unciale.

*Flos* unicus, culmo terminalis, magis minusve  
inclinatus, plerumque florens erectior, fruc-  
tiger magis horizontaliter porrectus.

*CAL.* *Spatha* monophylla, convoluta, teres, basi  
crassior, apice subulata, acuta, glabra, stri-  
ata florem sessilem includens, persistens,  
non nisi fructu maturo subtus dehiscens vel  
devoluta, subhorizontalis, fornicis instar  
fructum tegens, sub florescentia genitalia  
per apicem emittit.

*Cor.* Germini imposita, 2-flora flosculis ejusdem  
et aequalis situs, persistentibus: flosculo  
singulo biglumi: *Glumis exterioribus* lance-  
olatis, acutis, convexis, erectis, glabris;  
*Gl. interioribus* duplo longioribus, tenuiori-  
bus, linearibus, sibi invicem approximatis;  
lateribus anterieus compressis plicatis; apice  
acuto bifido, includentibus genitalia, in  
fructu maturo magis rigidis.

*STAM.* singulo flosculo *Filamenta* tria, linearia,  
plano-membranacea, latere exteriori extra  
stylum sita, gluma interiori comprehensa  
tandem earum longitudine. *Antherae* line-  
ares, compressae, spathae apicem perfo-  
rantes, filamentorum dimidia longitu-  
dinis.

PIST.

PLANTAE HISPANICAE. 201

**PST.** Germen sub receptaculo corollae et genitalium, duplex, communi crusta dura integra biloculari, foras hirsutissima sericea tereti oblonga tectum, singulum oblongo-lineare, foras convexum, interius planum. Stylus ex singulo germine solitarius, filamentorum figura et longitudine; stigma simplex.

**PER.** Fructus oblongus, crusta dura tenaci, pilis longis copiosis sericeis hirsutissima, biloculari, non dehiscente, coronata corolla arida persistente; dissepimento membranaceo simplici (non duplici).

**SEM.** solitaria singulo flosculo et loculamento, oblongo-linearia, hinc convexa inde plana, glabra farinacea, fructui semper inclusa.

Crusta seminis interdum unico solum semine foeta est, altero abortiente. Hoc idem saepe accidit in flore, ut genitalia alterius flosculi vel a parte masculina, vel feminina deficient vel labem quandam habeant.

Individuum unica vice legi tribus flosculis praeditum, glumis tribus exterioribus, tribusque interioribus, omnibus perfectis genitalibus.

• Color seminis obscure pallidus. ad cinereum vergens, plantae viridi-paleaceus, spathae pallide paleaceus.

Floret

Floret Majo usque Julium, semen vero maturefcit autumnò, vix tamen dimittitur e spatha ante anni subsequentiſ tempus æſtivum. Menſe enim Junio pauciſſimas vidi ſpathas, quæ ſemine orbatae fuerunt.

Loc. Habitat per Hiſpaniam australem copioſe.

Legi ad *Cienpozueros* in magna copia in convallibus declinatis declivibus et ad radices montium circumjacentium, vulgo *los ferros del Espartal* et *de las salinas*. Ad *Aranjuez* juxta agros ad viam eundo ad *Yepes*. Solo ſemper argilloſo, depreſſo, tempore pluviarum ſubhumido. Cluſius per Murciam naſci affirmat, et ab aliis in Africa quoque gigni fertur.

170.

Uſus hujus idoneus ex foliis ad ſtreas, corbes, ſpartellas aliaque ejus naturæ utenſilia conficiendâ. Sed hoc tempore et in hacce regione vilis habetur neque æſtimatur, ob copioſiſſimam meſſem, quam habent, Sparti herbae Plinii Cluſii ſ. primi auctorum, materiam longe præſtantiorem ad talia faciendâ præbentis. Accuſatur enim hoc noſtrum Spartum ſecundum ſ. Alvardin, tene-rioris ſtructuræ et brevioris, minoris tenacitatis, nec tantæ reſiſtentiae ac Spartum Plinii, vulgo *Esparto*; ſolum intellexi incolas

colas hujus foliis Pulvinos stramineos im-  
plere, ut culcitrae superiores vulgo in hac  
gione lanæe molliorem lectum reddant,  
cui usui promiscue inservit una alterave  
species.

53.  OMMELINA? Wachendorfia

 C   
 

*Authoris.*

Planta debilis, annua, digitali-  
spithamalis, glabra, simplex, interdum e basi  
ramosa.

*Folia* ovata f. ovato-lanceolata, basi cordata,  
sessilia sup riora in ramis sterilibus conferta  
et imbricata in rosam patentem; in fructifi-  
cantibus vero omnia alterna remota; basi  
vaginantia; vaginula integra striata.

*Flores*

PLANTAE AMERICANAЕ 227

*Flores* pauci 2-6, sessiles, ex axillis foliorum conferti, bracteolis spathulatis lineari-acutis distincti (hinc habitus fere Commelinæ, cui affine genus est.)

Nectario omnino caret. *Corollæ* color aqueus.

CAL. *Perianthium* triphyllum, erectum : *foliis* lineari-subulatis, dorso carinatis, persistentibus, marcescentibus.

COR. *Petala* tria, linearia, acuta, membranacea, calycis longitudine, erecta, apice patula.

STAM. *Filamenta* tria, capillaria, corollâ duplo longiora, erecta. *Antheræ* subrotundæ

PIST. *Germen* oblongum, compressum. *Stylus* capillaris, staminibus brevior. *Stigma* trifidum patens. (\*)

PER. *Capsula* oblonga compressa, acuminata, utrinque sulco impresso, bilocularis, bivalvis : valvulis dissepimento oppositis.

SEM. nonnulla, subrotundâ.

*Habitat* in vadis, depressis, sub fruticibus ubique circa BARCELONAM *Novam* in provincia Cumanensi.

(\*) Licet *Stigma* sit trifidum, nunquam tamen vidi *Capsulam* trilocularem.

54. PONTEDERIA *cordata* Phrynium *Authoris*.

Planta spithamalis, perennis, simplex.

*Radix* fibrosa, aggregata.

*Folia* cordata, acuta, nervosa, glabra, pubescentia ad radicem. Petioli basi vaginante.

*Florum* spica e rima vaginae caulinae terminalis, basi involuta spatha f. bractea lineari, tandem digitalis: floribus alternis absque bracteolis.

*Corolla* purpureo-caerulea, pallida, marcescens, nullo modo ringens.

CAL. nullus. *Spathae* nullae.

COR. hypocrateriformis, *Tubus* cylindricus, filiformis, longus. *Limbus* patens, sexpartitus, subaequalis, laciniis lanceolatis: tribus superioribus magis approximatis, subparallelis, minoribus, infimo patentiore, lineari, basi angusta, convexo, lateribus lato.

STAM. *Filamenta* tria, ad basin laciniae adnata, capillaria, limbo breviora. *Antherae* subrotundae.

PIST. *Germen* lineare. *Stylus* filiformis, longitudine staminum. *Stigma* capitatum.

PER. *Capsula* teres, linearis, acuta.

SEM. plurima, subrotunda, substriata.

*Habitat* BARCELLONAE in paludibus.

*Hispanis* Languera.

Ex dictis patet hoc Genus Gladiolo et Antholyzae esse affine (*Stamina 3 tantum, observata fuisse non intellexi, cum planta videatur esse Pontederia.*)

*Phrynium* nomen est Plinii deriv. a  $\Pi\gamma\beta\upsilon\omicron\varsigma$  rana; eadem enim cum illis inhabitat paludes.

5. IXIA. *Xiphidium Authoris.*

179.

*Radix* oblique transversa, inferius fibrosa.

*Caulis* simplex, pedalis, vestitus.

*Folia* alterna, copiosa, diffusa, caule altiora, plana, ensiformia (ad instar Iridis) se invicem imbricatim involventia, integerrima l. ferrulata.

*Flores* in racemo terminali, ramulosi, oblongi, nutantes, subconferti, albid.

CAL. nullus.

COR. oblonga, hexapetala: *petalis* linearibus, lanceolatis, connexis apice acuto incurvo, erectis.

STAM. *Filamenta* tria, linearia, plana, corollae mediae altitudine *petalis* interioribus opposita. *Antherae* ovatae, acutae, basi bifidae.

PIST. *Germen* triangulare. *Stylus* filiformis, corollae longitudine. *Stigma* simplex.

PER. *Bacca* globosa, obtusa, tribus lineis excavata.

230 PLANTAE AMERICANAЕ

cavata, mollis, trilocularis: loculis exteris  
vacuis.

SEM. plurima, subrotunda, acuminata, recep-  
táculo globoso inserta, elevata.

Fructus forte capsula mollis baccata.

*Habitat* citra MACARAPA pop. Indian.

Xiphidium est nomen Plinii a figura foli-  
orum desumptum.

TETAN-

T E T R A N D R I A. 180.

M O N O G Y N I A.

56. **W**EDELIA. (ALLIONIA *incarnata*.)  
*Radix* fibrosa.

*Caulis* plures, diffusi, procumbentes, articulati, pubescentes.

*Folia* oblique ovata, opposita, bina l. terna ad radicem geniculata, alterna majora, reliqua sensim minora, subsessilia, integra.

*Flores* alterni, solitarii, ex alis foliorum minores vel ramulosi. Pedunculo floris longitudine.

Corolla pallide purpurea.

CAL. *Perianthium* commune triphyllum, triflorum, *foliolis* ovatis, concavis.

COR. *universalis* aggregata, aequalis, triflora; singula intra angulum folii calycis: *propria* tubulosa, Germini insidens. *Tubus* angustus sensum ampliatus. *Limbus* erectus, inaequalis, e latere interiore tantum continuatus s. exsertus, obtuse trifidus; laciniis bifidis, e latere interiore deliquescentes.

STAM. singulis *Filamenta* quatuor, setacea, corolla paulo longiora. *Antherae* subrotundae.

PIST. singulis *Germen* sub corollula; oblongum.

*Stylus* setaceus. *Stigma* capitatum, oblongum.

PER.

PER. nullum. *Calyx* laxus femina fovet.

SEM. solitaria, nuda, oblongo-linearis, interiorius convexa, exteriorius alis inflexis notata.

*Habitat* juxta CUMANA urbem, in silvis arenosis ubique tempore pluviarum.

Ab omnibus aggregatis differt calyce triphylo, trifloro.

181. 57. ALLIONIA. *violacea*.

*Radix*. . .

*Caulis* herbaceus, erectus, debilis, ramosus.

*Folia* opposita, cordata, acuta, integerrima, glabra, inferiora longe petiolata.

*Flores* in panicula ramosa, terminales, bracteis brevibus.

Corolla majuscula purpureo-caerulea. (Hinc facie recedit a superiori planta, ut et corollae magnitudine).

CAL. *Involucrum* commune monophyllum, laxum, quinquefidum; laciniis ovato-acutis, paulo inaequalibus, divisura una usque ad basin sectum, persistens.

*Perianthium* proprium nullum.

COR. aggregata triflora, aequalis, *propria* infundibuliformis s. obconica: ore erecto, quinquefido: laciniis exterioribus paulo longioribus.

STAM. *Filamenta* quatuor, setacea, corolla longiora,

longiora, ad unum latus flexa. *Antherae* subrotundae.

PIST. fing. *Germen* sub corollula, oblongum, obsolete octangulum. *Stylus* fetaceus, staminibus longior. *Stigma* multifidum, lineare.

PER. nullum.

SEM. solitaria, oblonga, quinquangula, tuberculis undique inaequalia, nuda.

A praecedente imprimis differt calyce et partim corolla.

*Cumanensibus* Jasminullo.

## PENTANDRIA.

## MONOGYNIA.

58. RHAMNUS *cumanensis* (EHRETIA  
*exsucca.*)

*Arbor* mediocris, sursum ramosa; ramis sparsis; cortice nigro-cinerascente.

*Folia* alterna, in ramulis tantum novellis, oblonga, sursum latiora, inferius attenuata, venosa, integerrima, margine reflexa.

*Flores* in Racemis ramosis, terminalibus, fastigiatis, 10-13. ramulis alternis, pedunculis congestioribus.

*Bracteae* nullae.

*Corolla* alba, magna.

CAL. *Perianthium* monophyllum, tubulatum, femibifidum: *laciniis* ovato-acuminatis: persistens.

COR. hypocrateriformis. *Tubus* cylindraceus, sursum leviter ampliatus, calyce longior.

*Limbus* planus, quinquepartitus: *laciniis* ovato-subrotundis, obtusis.

STAM. *Filamenta* quinque, subulata, tubo corollae versus basin adnata, basi pubescente, longitudine tubi. *Antherae* lineares, acutae, versatiles.

PIST.

**P**IST. *Germen* ovatum. *Stylus* filiformis, superne bifidus: laciniis erectis, longitudine staminum. *Stigma* obtusum, crassiusculum, emarginatum.

**P**ER. Fructus nudus, quadrangularis, paulo depressus, rostro longiusculo, obtuso; angulis compressis; quadripartibilis, quadri-fariam dehiscens ad angulos.

**S**EM. quatuor, quartam partem fructus constituunt, ceterum spongiosa, nucleo vero oblongo, lignoso praedita.

*Cumanensibus* Guatacare.

*Habitat* in CUMANA et versus missiones Franciscanorum in Piritu ad montem Unare.

Fructus non demittit femina nuda, nec mollis est. Calyx uti bifariam ruptus naturalis est, ita interdum trifariam rumpitur.

59. CEDRELA. *Brownii*. Cedro. *Authoris*. 183.

*Arbor* magna, excelsa, odorata trunco interdum quatuor l. quinque pedum diametro, glabriusculo, subaequali, superne pulcro, aequaliter ramosa: ramis in coma oblonga sparsis.

*Folia* alterna, pinnata, bi-vel tri-pedalia; *foliis* oblongo-acutis, glabris, integerrimis: mucrone angusto.

*Peduncululus*

236 PLANTAE AMERICANAЕ.

*Pedunculus* teres, superne leviter compressus, basi clavatus; pedicellis teretibus oppositis.

*Flores* in Racemo ramosissimo, paniculato, ramis patentissimis; ramulis alternis, remotiusculis, bi-vel trifloris.

Corolla albescens, carnea, liliacea, facie fere Hyacinthi.

CAL. *Perianthium* monophyllum, breve, convexum glabrum, trifidum: *laciniis* ovatis; marcescens.

COR. pentapetala, tubulata, basi ventricosa, sursum contractior; ore patulo; calycum multo longior. *Petalis* lineari-oblongis, obtusis, erectis, ad tertiam partem baseos interiorius receptaculo pentagono adnatis.

STAM. *Filamenta* quinque, subulata, corolla dimidio breviora, receptaculo adnata. *Antherae* oblongae apice extrorsum flexo.

PIST. *Germen* receptaculo quinquangulati ad altitud. corollae mediam elevatum; globosum. *Stylus* filiformis, crassiusculus, corollae longitudine. *Stigma* capitatum, depressum.

PER. *Fructus* quinquelocularis.

SEM. - - -

*Hispanis* Cedro.

*Habitat* CUMANAE hinc inde fere culta. In  
Insula

Insula TRINITATIS ad ostia fluvii Orinocensis copiose.

Arbor haec naturali affinitate jungitur cum Chryfobalano, Spondia, de quibus infra.

60. CALCEOLARIA. (*Viola forte.*)

I. CALCEOLARIA (*VIOLA oppositifolia*) caule brachiato glabro, floribus racemosis.

*Radix* fibrosa, crassiuscula, perennis. 184.

*Caules* erecti, spithamales usque sesquipedales, inferne lignosi, superne herbacei, teretes, glabri, ex superioribus alis foliorum brachiati, ramis oppositis.

*Folia* opposita, lanceolata, subsessilia, acute ferrata, ferraturis longis, vix profundis, apice integerrimo; petiolis brevissimis.

*Flores* in racemis, solitarii, patentes; pedunculis in media inferiore parte persistentibus.

*Calyx* inferius gibbus, foliolis imis patentioribus.

*Lamina* ima *petalorum* fere ungue angustior, apice sursum flexa et revoluta.

*Capsula* trigono-pyramidata, angulis obtusiusculis, lateribus planis.

*Semina* subangulata.

*Corolla*

238 PLANTAE AMERICANAÆ.

*Corolla* alba, adeoque facies fere Veronicæ Anagallidis aquaticæ vel scutellatæ.

2. CALCEOLARIA (*VIOLA Calceolaria*) caule simplici hirsuto, floribus axillaribus solitariis,

*Radix* perennis, fibrosa, crassiuscula.

*Caules* plures, herbacei, simplices, pedales, teretes.

*Folia* alterna, lanceolata vel oblongo-lanceolata, sessilia, pilosa, ferrata, erecta.

*Stipula* subulata, erecta, pilosa, cauli adjuncta.

*Flores* solitarii, alterni, axillares, subsessiles vel pedunculo sustentati cum Bracteolis duabus setaceis in medio pedunculo.

*Calyx* ovatus, foliolis omnibus erectis, intus glabris, extus hirsutis, versus marginem tuberculis filiformibus, truncatis, pilosis obfritis.

*Petala* lateralia lanceolata, foras pubescentia, ungue lineari: petala infima valde magna, ungue inferius carinata.

*Capsula* calyce tumido laxo tecta, teretiuscula.

185. *Semina* glabra, nitida, nigra, altera extremitate pallida.

*Corolla* alba.

Haec

Haec quod ad omnes partes, magnitudine bis vel ter superat praecedentem, hinc sat diversa est facie externa, situ foliorum, etc.

3. CALCEOLARIA (*VIOLA Hybanthus*) frutescens.

CAL. *Perianthium* pentaphyllum, *foliis* linearibus, acutis, erectis, fere conniventibus; persistens.

COR. *Petala* quinque, inaequalia, quorum *superiora duo* reliquis breviora, linearia, angusta; *lateralia duo* paulo longiora, latiora, lanceolata: unguis lineares calycis longitudine; *infimum* maximum, ungue calyce longiore; lamina subrotunda, plane ungue longiori; ante florescentiam utrinque involuta.

STAM. *Filamenta* quinque, linearia, brevissima. *Nectarium* glandula in Filamentis, inferius bipartita, subrotunda, exterius affixa. *Antherae* oblongae, apice, acutae, membranulis oblongis, lateribus saepius imbricatis.

PIST. *Germen* ovatum. *Stylus* filiformis, fursum incurvus, apice compresso. *Stigma* simplex.

PER. *Capsula* ovata, trigona, unilocularis,  
tri-

trivalvis, seminibus medio valvularum af-  
fixis.

SEM. plura, subovata.

Affinitate naturali proxima est Violaë,  
uti ex toto caractere apparet; sed  
proprii Generis, licet facies externa  
Plantæ aliquantum recedat.

Calceolariam dixi ob figuram Floris.

HEXANDRIA. 186.

MONOGYNIA.

61. **A**CHRAS. *Sapota Brown. jam. 200.*  
*Arbor* alta, frondosissima, perpetuo virens,  
 pulcra.

*Folia* conferta.

*Spatha* ad apices ramorum, oblonga (laciniata), integerrima.

*Flores* axillares ex alis foliorum versus summitatem ramorum, solitarii; pedunculis teretibus, tomentosis, longitudine florum.

*Potum* sapore omnes fere Américas fructus antecellit.

*Semina* Amygdalorum forma et magnitudine, hilo albo longitudinali.

CAL. *Perianthium* subrotundum, hexaphyllum: *foliis* ovatis, concavis; exterioribus minoribus, latioribus, deciduis.

COR. monopetala, ovata, calycis altitudine, duodecimfida; *laciniis* erectis, alternis: exterioribus sex subovatis, planis; interioribus angustioribus, introrsum convexis, extrorsum subcarinatis.

STAM. *Filamenta* 6, brevissima, subulata, e regione laciniarum exteriorum, ad harum basin corollae inserta. *Antherae* subulato-acutae.

PIST. *Germen* subrotundum, paulo depresso. *Stylus* filiformis, corolla longior. *Stigma* simplex, obtusum.

PER. *Pomum* globosum, decem-l. duodecim-loculare, carne mollissima.

SEM. singulo loculo solitaria, magna, compressa, ovata, nitida, margine longitudinali interiore hilo notata, superius denticulo notata.

1. Semina multa in pomo abortiunt.

Quum loculi vix manifesta membrana includantur forte quis *Baccam* diceret, sed quum loculi steriles in fructu distincti observentur, *Pomum* nuncupavi.

2. Adeoque character hic non multum differt a *Chrysophylo* Gen. Pl. 185. addita illa sexta parte numeri in partibus Floris; quum autem aham, in proxima sectione monstraverim, *Chrysophylo* magis affinem et insuper *Chrysophyllum* verum Spec. Plant. f. *Cainito* Plum. et *Americanum* omnino differant fructificatione a *Chrysophyl-*

lo descripto, necessarium duxi ut hoc traderetur Genere distincto.

3. Cum dubio vix careat, quin Plumiferus, plantam hanc in omni Americes regione communem e. gr. in Porto Rico, ubi quoque Nispero appellatur. In Cuba S. Havana, S. Domingo, in Vera Cruce novae Hispaniae ubi Sapote audit; nullum proprium genus ex ejus vidi, nisi Achras f. Sapote, cui nostrum adaptandum erit. Character Gen. Pl. 1001. qua fructum omnino convenit, soli loculi quinque Baccae (Pomi), ut minus distinguibiles non apponuntur. Calyx addita quinta parte nec differt magis. Sola corolla polypetala abest, sed forte minus accurate delineata fuit.

Numerus senarius in flore constans est.

Americanis Hispanis *Nispero* dicitur h. e. *Mespilus*.

62. **LORANTHUS.** *Stelis* *Loefling.* *Scur-  
rula* *Brown.*

1. **LORANTHUS** (*Stelis*) racemis trichotomis,  
floribus aequalibus.

*Planta* *parasitica.*

R 2

*Caulis*

244 PLANTAE AMERICANAE.

*Caulis* frutescens, lignosus, brachiatus, ramis patentibus, basi tubere magno.

*Folia* saepius opposita, (interdum alterna), ovata vel longa, integerrima, glabra, coriacea, subsessilia. *Pedunculi* plures, axillares, patuli, sursum communiter bifidi, singuli apice crassiores, trigoni, flores tres sessiles gerentes, minimis suffultos bracteis.

*Flores* luteo-virides.

**222.** LORANTHUS (occidentalis) racemis oppositis, floribus irregularibus.

**CAL.** *Perianthium* nullum; nisi margo minimus basin floris cingens.

**COR.** *Petala* sex, linearia, angustissima, ad medium in tubum erecta, superne patentia, revoluta, longitudinaliter concava.

**STAM.** *Filamenta* sex, linearia, acuta, plana, petalis breviora eorumque basi inserta. *Antherae* lineares, acutae.

**PIST.** *Germen* brevissimum, sub receptaculo floris. *Stylus* filiformis. *Stigma* globosum, capitatum.

**PER.** *Bacca* cylindrica, oblonga, unilocularis, monosperma.

**SEME** unicum, cylindrico-oblongum.

*Habitat* CUMANAE vulgaris in arboribus.

*Stelis* antiquo *Viscum*.

**DE-**

DECA NDRIA.

189.

MONOGYNIA.

63. TRICHILIA. (*trifoliata*) (*Halesia* *Loeflingii*.)

*Frutex* ramis patulis, rectis; cortice scabriusculo, punctato.

*Folia* alterna, ternata: foliolis obovatis, cuneiformibus: intermedio duplo - triplove longiore, angustiore: lateralibus magis subrotundis; omnibus integerrimis, obtusis, planis, venosis. Pedunculus communis filiformis, supra planus.

*Flores* ex summitatibus ramulorum, in racemis raris, inaequalibus; subconferti sessiles.

*Corolla* alba.

*Capsula* grisea ex fusco et punctis albis, scabriuscula, seminibus baccatis eleganter coccineis.

CAL. *Perianthium* monophyllum, breve, tubulatum, erectum: ore obsolete quinque-dentato.

COR. *Petala* quinque, exserta, calyce duplo longiora, lineari-lanceolata, erecta.

STAM. *Filamenta* decem, linearia, basi connata.

ta. *Antherae* oblongae, latere interiori Filamentorum insertae.

PIST. *Germen* obovatum. *Stylus* brevis. *Stigma* crassum, tridentatum (Brown).

PER. *Capsula* globosa, sursum tribus sulcis notata, unilocularis, trivalvis: *Valvulis* in medio linea elevatiore notatis.

SEM. tria, cohaerentia in globum, triplice Sulco distincta; succulenta, baccata.

Variat interdum flore quadrifido octandro. Genus affine *Meliae*, ut videtur.

Filamenta descripta forte potius dicenda *Nectaria*, cujus summitatibus insident *Antherae*.

*Cumanaensis* Ceraso macho h. e. *Cerasus* major.

*Habitat* CUMANAE in sylvis copiose.

## POLYANDRIA. 189

## MONOGYNIA.

64. LECYTHIS. *Ollaria.*

*Arbor* vasta, *Ramis* undique magnis inaequalibus, hinc inde flexis; *cortice* ramuloso asperoso.

*Folia* ad apices ramorum, alterna, cordato-ovata; firma, glabra, subintegerrima, subundulata; fusco-viridia, sessilia.

*Flores* spicati, terminales, alterni, subnutantes; *pedicellis* horizontalibus, subangulatis. *Bractee* ovatae, concavae, mox deciduae.

*Corolla* alba, *petalis* inferius pallidis.

*Nectarium* luteum.

*CAL.* *Perianthium* hexaphyllum: *foliis* oppositis, imbricatis; inferioribus subrotundis, minoribus; interioribus oblongis, concavis, persistentibus.

*COR.* *Petala* sex, patula, inaequalia, calyce multo majora, horum quatuor superiora subrotundo, concava, margine oblique reflexo; inferiora duo majora, oblonga, concava, patentia.

248 PLANTAE AMERICANAE.

*Nectarium* monophyllum, lingulatum, basi plana perforata pro Germine, marginata, lingula a latere inferiore floris sursum inflexa, lineari, apice crassa, ovata, foras convexa, interius filamentis aggregatis numerosissimis, referta, obtegente genitalia.

STAM. Filamenta copiosissima, brevissima, superius crassiora, disco baseos nectarii undique inserta. Antherae subrotundae, parvae.

PIST. Germen depressum, acuminatum, cinctum receptaculo floris. Stylus nullus.

Stigma obtusiusculum, conicum.

PER. Fructus basi subrotundus, lignosus, magnus superius cinctus calycis rudimentis obtusis, ore integro: continens fructum molliorem, quem non vidi.

SEM. plura.

*Barcinonensibus* Olleto.

190. Licet fructum non accurate teneamus, tamen ob florem vere singularem proprium l. novum genus esse abunde patet. Vix crediderim Marcgraviam Gen. Pl. 507. a Plumiero adeo barbare esse descriptam, ut haec nostra idem cum illa constituat genus. (negatur.)

*Nectarium* naturaliter inflexum in flore, R 4 figura

ramulorum figura et colore exaete imitatur vitellum ovi, fructusque siccus lignosus ollam apprimere refert concavam: hinc *Lecythum* vocavi a graec. λικυθος quod vitellum et ollam significat.

65. GUIDONIA. *Brown. jani 249.* Lactia  
*Authoris. (LAETIA apetala.)*

*Arbor* humilis vel *Frutex* magnus; ramis inaequalibus, patulis.

*Folia* in ramis novellis, terminata saepe supra florem, alterna, sparsa, oblonga, serrulata, venosa, subrugosa, decidua, erumpentia post vel sub ipsa florescentia, tumque utrinque involuta; petiolis brevibus.

*Flores* ex axilla dichotomiae laterales, vel ex axillis foliola, vel infra folia ex axillis robustis.

*Radunculus* communis petiolis paulo longior, trifidus: ramulis brevissimis; pedicellis propriis, filiformibus, ad articulationem deciduus, coloratus.

*Bracteae* oppositae, brevissimae, acutae, subaxillares.

*Calyx* albus.

*Baccae* luteo-pubescentes.

*CAL.* *Perianthium* pentaphyllum; *foliis* oblongis,

250 PLANTAE AMERICANAE.

longis, concavis, reflexis, coloratis, marcescentibus.

COR. nulla, nisi calycem dicas ob colorem.

STAM. *Filamenta* plura, centum circ. capillaria, erecta, patentia, calyce paulo minora.

*Antherae* subrotundae.

PIST. *Germen* oblongum, desinens in *Stylum* filiformem, staminibus longiorem. *Stigma* capitatum; depressum.

PER. *Bacca* subglobosa, obsolete tetragona, totidemque lineis exarata, obtusa, unilocularis.

SEMI. plura, nidulantia.

*Habitat* in silvis depressis juxta CUMANAM.

191.

66. SEQUIERIA. *americana*.

*Frutex* orgyae et sesquiorgyae altitudine, valde ramosus, teres, glaber: petiolis teretibus, supra planiusculis, brevissimis.

*Flores* in racemis digitalibus, simplices vel basi ramosi, alterni, pedicellati, albi, bracteolis nullis.

CAL. *Perianthium* pentaphyllum patens: *foliis* oblongis, concavis, coloratis, persistentibus.

COR. nulla, nisi calycem velis.

STAM. *Filamenta* plura viginti, capillaria, undique

PLANTAE AMERICANAE. 251

dique patentia, calycis longitudine. *Antherae* oblongae, planiusculae.

*Pist.* *Germe*n oblongum, compressum, superne membranaceum, latere altero crassiore.

*Stylus* ad latus crassius *Germinis*, brevissimus. *Stigma* simplex.

*PER.* *Capsula* oblonga, ala maxima aucta, latere altero rectiore crassior, basi lateraliter utrinque notata alulis tribus membranaceis; unilocularis, non dehiscens.

*SEM.* unicum, oblongum, glabrum.

De *Stylo* et *Stigmate* certissima dicere nequeo, unicum enim florem tantummodo vidi, fructus vero observavi plurimos.

*Habitat* in sylvis depressis umbrosis humilibus juxta Arb. Draconis.

TRIGYNIA.

67. PORTULACA foliis lanceolatis, convexis, pedunculis unifloris *Spec. Plant.* 446. 4

*Halimum* *Loefl.* *Sesuvium* *Portulacastrum.*

*Icosandr.* *Trigyn.*

*Radix* filiformis, perennis.

*Caulis*

Caules plures, undique diffusi, repentes, teretes, articulati, glabri.

192. Folia opposita, lanceolata vel lineari-lanceolata, supra planiuscula, infra convexa, succulenta; pedicellis brevissimis vix ullis: axillis nudis nec pilosis.

Flores axillares, solitarii. Pedunculi flores longitudine.

Calyx foras viridi-glaucus, intus purpurascens.

CAL. Perianthium monophyllum, quinquepartitum, campanulatum: laciniis ovatis, acutis, crassis, imbricatis, patentibus, intus coloratis, marcescentibus.

COR. nulla.

STAM. Filamenta plura, septuaginta circ. subulata, calyce breviora, eidem parallela, intra lacinias inserta. Antherae subrotundae.

PIST. Germen oblongum, superius paulo trigonum, in fundo calycis situm. Styli tres, capillares, erecti, staminum altitudine. Stigmata simplicia.

PER. Capsula ovata, trilocularis: loculis horizontaliter dehiscentibus. Receptacula seminum conico-filamentosa.

SEM. subrotunda, planiuscula, margine rosetello acuto notata.

*Cumanensis* VIDRO h. e. vitrum, ex cineribus enim ejus, Salsolae et Salicorniae fere aequivalentibus, saponem conficiunt.

*Habitat* juxta CUMANAM, versus mare, colli: piosissime.

Quantum ex legibus affinitatem Gen-  
rum comprehendo, a Portulaca distin-  
ctum est Genus.

DIDY-

193.

**DIONIDYON ALBA.**

**GYMNOSPERMIA.**

68. **BONTIA nitida.** (Donatia, Loeff.)

*Arbor*, mediocris vel frutex, ramis oppositis, teretibus, glabris.

*Folia* opposita, lanceolata, crassa, rigida, integerrima, glabra, acuminata, triuncialia, supra viridia, infra glauco-incana, subsessilia.

*Flores* in spicis oblongis et subrotundis, quadrangulatis, compactis, sessiles, oppositi.

*Bracteolae* tres ad singulum florem: unica exteriore; duabus lateralibus ovato-acutis, carinatis, brevibus.

*Corolla* alba.

Fructus viridis, amygdalis major: Cotyledonibus junctis, conduplicatis intra tunica exteriori.

*Perianthium* pentaphyllum, inaequale: *sepalis* oblongis, dorsali unico persistente.

*Cor.* monopetala, inaequalis. *Labus* subrotundus, calycis longitudine. *Limbus* quadripartitus, bilabiatus: *labium sup.* indivisum, obtusum, emarginatum: *lab. inf.* tripartitum: laciniis

laciniis oblongis; lab. superiore duplo longius.

STAM. *Filamenta* quatuor, setacea; quorum anteriora longiora, dorso corollae adpressa, parallela, apice lateraliter patentia. *Antherae* subrotundae.

PIST. *Germen* oblongo-subulatum, desinens in *Stylum* subulatum; longitudine staminum. *Stigmata* duo, acuta, erecta.

PERI. nullum.

SEMI. unicum, nudum, magnum, ovatum, compressum, apice paulo obliquo, acuto: cotyledonibus junctum conduplicatis.

*Hispanis* MANGLE negro.

*Habitat* ad mare.

194

69. VERBENA. *lappulacea*. (*Burseria* Loeff.)

*Radix* fibrosa, annua.

*Caulis* erectus, herbaceus, acute quadrangulus, glaber, intus cavus, 1-3 pedalis: ramis oppositis, erectis.

*Folia* opposita, ovata, serrato-crenata, venosa, scabriuscula, petiolis glabris, brevibus.

*Florae* alterni, spicati, subsessiles, terminales, cauli et ramis; spicis longis, spithameo-pedalibus.

*Fructus* ad unum latus flexi, subnutantes; pedicellis brevibus.

*Bractea* linearis pedicelli longitudine.

Corolla

Corolla pallida, purpurea.

Calyces fructus viscosi adhaerentes.

CAL. Perianthium monophyllum, tubulatum, laxum, ore quinquangulato, obtuso: *denticulis* acutis, persistentibus.

COR. tubulata, inaequalis: *Tabus* cylindricus, calycis altitudine. *Limbus* planiusculus, quinquepartitus: *laciniis* ovatis, unica latiore.

STAM. *Filamenta* quatuor capillaria, quod duo superiora longiora. *Antherae* subrotundae, harum superiores oblongae, duplo majores.

PIST. *Germen* oblongum. *Stylus* filiformis, brevis: *Stigma*.

(PER. nullum.) *Fructus* quadrangulus, dentatus, obtusus obtegitur calyce inflato, vesicario.

SEM. duo, nuda, hinc utrinque angulata: angulis compressis, retrorsum subdentato-feratis, inde plana obtusa.

Haec itaque etiam semina nuda gignit.

Calyces inflati bursam minorem quodammodo referunt.

70 DURANTA. *Ellisia*. ANGIOSPERMIA.

(*Hoffmannia* *Loefl.*)

*Frates* longitudine circ. duar. orgyiarum, ramosus,

mosus, erectus: ramis superne suboppositis, quadrangulis, alternis, lateralibus magis compressis vel inermibus vel spinosis.

*Folia* opposita, oblongo-ovata, in petiolum attenuata, serrata, in ramis fructificantibus saepius integerrima.

*Spinae* oppositae ex alis, patentissimae, subulatae, foliorum mediae longitudinis vel quartae partis; in ramis sterilibus magnae; in fructificantibus vero minimae aut omnino nullae.

195

*Flores* in racemis lateralibus, oppositis vel terminalibus, pendulis, plurimis, pedicellis brevibus post florescentiam elongatis; fructus longitudine.

Bracteae lineares, subulatae, angustissimae.

Corolla purpurascens.

Baccae luteo-rubrae.

CAL. *Perianthium* monophyllum, tubulatum, cylindricum; superne quinquangulare; ore integro quinquedentato: denticulis acutis.

COR. tubulata; *Tubus* cylindricus: superne paulo latior, parum incurvus, planiusculus, quinquepartitus: *lacinis* oblongis; subaequalibus.

STAM.

PIST. *Germen* globosum. *Stylus* filiformis, rectus, staminibus brevior. *Stigma* simplex, obtusum, crassiusculum.

PER. *Bacca* globosa, calyce superne connivente arcte tecta unilocularis.

SEM. quatuor, subrotunda, ovata, hinc convexa, inde angulata.

*Hispanis* FRUTA de POLAMITA.

*Habitat* in silvis depressis circa CUMANAM.

71. KRAMERIA. (Ixiine *Loefl.*) Tetrandr. Monog.

*Radix* fibrosa.

*Caules* fruticantes, inferne procumbentes, undique sparsi; mox adscendentes, virgati; inferius subdivisi; superius ramulis vagis erectis.

*Folia* alterna, lanceolata, superiora linearia, acuta, subseffilia.

*Flores* alterni in racemo terminali; pedunculis axillaribus in medio instructis bracteolis duabus acutis linearibus.

Corolla roseo-purpurea.

196 Nectarium superius apice pallidum, inferius nigro-purpureum.

Planta ipsa fusco-cana est.

CAL. nullus, nisi corollam velis.

COR. tetrapetala, patens, inaequalis: *petalis* oblongis acutis: superiore patentiore, lateralibus ovatis.

*Nectarium* duplex: *superius* erectum, lineare, tripartitum: *laciniis* linearibus, crassiusculis,

crassiusculis, apice ovatis, membrana-  
ceis supra stamina: *inferius* sub Ger-  
mine, diphylum, *foliis* convexis, li-  
neolis elevatis, rugosis.

STAM. *Filamenta* quatuor, intra nectarium su-  
perius, inclinata, adscendentia, subulata,  
quorum duo exteriora paulo longiora. *An-  
therae* parvae, apice duobus foraminibus  
apertae.

PIST. *Germen* ovatum. *Stylus* subulatus, ad-  
scendens, staminum situ et longitudine.  
*Stigma* acutum.

PER. *Fructus* globosus, undique pilis rigidis,  
retrosum asperis echinatus, unilocularis,  
non dehiscens, siccus.

SEM. unicum, ovatum, glabrum, durum.

*Cumanensibus* CARDILLO breve, a fructu  
pungente.

## DIADELPHIA.

## PENTANDRIA.

72. MONIERIA *trifolia*.

*Radix* annua, fibrosa.

*Caulis* pedalis, a medio sursum dichotome divisus, glaber, in summo pubescens.

*Folia* inferiora opposita; superiora saepe alterna, ternata: foliolis oblongis, integerrimis, pubescentibus, intermedio paulo majore in pedicillum attenuatum. Petiolus communis teres, foliolis paulo brevior.

*Flores* alterni, in spica divaricata, *pedunculo* e dichotomia ramorum summorum vel axillis foliorum supremorum exeunte, filiformi, erecto, sustentato *spica* bipartita; ramis divaricatis, simplicibus, rectis, fere horizontalibus vel paulo ascendentibus: rachi leviter flexuosa, floribus alternis, sessilibus cum solitario ex divisione spicae, secundis.

*Braeae* nullae, sed Calycis lacinia superior et lateralis exterior, braeas mentiuntur.

*Corolla* omnino alba est.

CAL. *Perianthium* quinquepartitum: laciniis

inae-

inaequalibus; superiore lineari, longa, incurva, florem obtegente; laterali exteriori dimidio brevior, lanceolata; reliquis brevibus, obtusis, persistentibus.

COR. tubulata, ringens; brevior calycis lacinia superiore. *Tubus* cylindricus, in medio contractior, curvus. *Limbus* bilabiatus, quinquefidus: *labio sup.* indiviso, ovato, obtuso; *lab. inf.* quadrifido, recto, laciniis oblongis, obtusis.

*Nectarium* squama, ovata ad basin germinis, infra filamentum inferius.

STAM. *Filamenta* duo, plana, membranacea, quorum *superius* concavum, apice bifidum; *inferius* planum apice trifidum. *Antherae* in *Filamento sup.* duae connatae; intus hirsutae, includentes stigma; in *Filamento inf.* tres minutissimae, teretes (an steriles?)

198

PIST. *Germen* subrotundum, quinquelobum, quinquangulatum. *Stylus* solitarius, filiformis. *Stigma* capitatum, oblongum, intus planum, orbiculatum, margine acuto.

PER. *Capsulae* quinque ovatae, breves, compressae, uniloculares, futura dimidio bivalves.

SEM. solitaria, ovata, margine interiore rectiore obtusiore, inclusa *Arillo*.

Singularissima est Fructificatio. Fructus

181

saepe tantummodo a Capsula maturef-  
cunt.

Spicae fere referunt Penthorum, quae  
Planto est diversissima, fructificatio  
adhuc magis recedit.

Dubium est utrum Antherae tres infe-  
riores sint steriles, nec ne?

POLYA-

POLYADELPHIA. 189

MONOGYNIA.

*Nota.* Ad hanc classē haesitabundus refero Genus quoddam valde singulare, nescius, an potiori jure ad Monadelphiam Pentandriam, an etiam ad Gynandriam pertineat.

73. **A**YENIA. (*Jungia Authoris.*) Gynandr.  
Pentandr.

1. AYENIA magna foliis cordatis acuminatis crenatis, germine sessili, nectario concavo.

*Facies et magnitudo* omnino Sidae Abutilonis Spec. Pl. 685. 7.

*Radix* fibrosa, perennis.

*Caules* erecti, bi-vel tripedales, inferne suffruticosi, teretes, molliter pubescentes: ramulis brevibus, alternis.

*Folia* alterna, cordata, ferrate crenata, molliter pubescentia. *Petiolus* filiformis, foliol. circ. longitudine *Stipulis* subulatis, minimis.

*Flores* axillarum pedunculati in panicula ramorum inaequali, *Pedunculus* communis folitarius vel bini ex ala ab utroque latere

prodeuntes, medium axillae occupante rudimento ramuli, sursum bifidum trifidum, terminati duobus vel tribus pedicellis: Bracteolae acutae ad singulum pedicellum.

*Calyx* pentaphyllus, patens, leviter reflexus, lanceolatus, acutus, persistens.

*Nectarium* calyce minus, sessile, campanulato-patens: ore quinquefido: laciniis emarginatis, bifidis, sinibus inter lacinias inflexis; glandula acuta.

*Filamenta* superius inflexa, dilatata in membranam, transverse oblongam vel reniformem; extus convexa, intra concava. *Antherae* tres faciles visu (vel 3-loculares,) sessiles, suboblongae.

*Germen* pilosum; sessile, globosum, *Stylus* filiformis, nectario paulo altior. *Stigma* convexum, capitatum quinque-lineis.

200 *Capsula* convexa, externe pilis copiosis subulatis hispida.

Color floris herbasceus.

*Habitat* juxta CUMANAM ad viam versus Ipunc.

123 *AYENIA pusilla* foliis ovatis acutis serratis, germine pedicellato, nectario plano stellato.

*Radix* fibrosa, annua vel perennis.

*Caules* adscendentes, spithamales vel pedales, subsimplices.

*Folia* oblongo-ovata, acuta, serrata, glabra; petiolo

in petiolo foliis paulo minore, incana rubescentia. *Stipulae* fetacæ, erectæ. omnibus

*Flores* 3-6, axillares, pedunculis capillaribus 1 vel 2 linearum longitudine, horizontalibus.

*Calyx* pentaphyllus, patentissimus, plano-reflexus: foliolis planiusculis, intus albis coloratis.

*Nectarium* germen pedunculatum cingens, quinquangulare, subplanum.

*Filamenta* quinque, capillaria, calyce triplo longiora, erecta, modice arcuata, apice inflexa, conniventia, amicta Membrana plana, rhomboidali, ovata, marginibus latentibus anterioribus et apice interiore cum Nectarii angulis connatis. *Antherae* parvae, connatae unam mentiuntur, membranulae versus apicem adnatae, sessiles.

*Germen* pedicello (columella filiformi, erecta, staminum altitudine) elevatum.

*Stylus* brevissimus.

*Fructum* non vidi.

*Color* Calycis interni et filamentorum pallidi calbus, centro Nectarii lutescens.

Adoque in partibus haud paucis a superiore differt.

*Habitat* in depressis silvis juxta paludem, citra

Fluvium UNARE.

coloris

3. *AYENIA tomentosa* foliis ovato-subrotundis tomentosis, germine pedicellato, nectario plano.

CAL. *Perianthium* quinquepartitum: *foliolis* lanceolatis, acutis, persistentibus.

COR. *Petala* nulla.

201

*Nectarium* monophyllum, margine quinquefido, campanulatum.

STAM. *Filamenta* quinque, extra nectarium, e regione sinuum Calycis orta eoque longiora, arcuata, inflexa, apice lato membranaceo nectarii margine adfixa. *Antherae* tres, subrotundae, subtus in membrana latiore filamentis conferta connatae; vel triloculares.

PIST. *Germen* subrotundum, sessile vel columella filiformi elevatum. *Stylus* cylindricus, brevis.

*Stigma* capitatum, quinquangulare.

PER. *Capsula* subrotunda, quinqueloba, quinquelocularis: *loculis* integris, deciduis, latere interiore solum dehiscentibus.

SEM. solitaria, oblonga, ovata, hinc convexa, inde plana.

Capsulae forte potius quinque coalitae dicendae. Genus singulare et ordo Nat. XXXIV. malvacea.

*Sectio Secunda.*

GENERA DUBIA:

74. SPERMACOCE. Diodioides *Loefl.*)

1. SPERMACOCE *spinosa* suffruticosa, foliis oblongis oblique striatis.

*Radix* perennis.

*Caulis* suffruticosi, tetragoni, bi-ad quinquepedales, infirmi.

*Folia* opposita, basi utrinque membrana strigoso-ciliata conjuncta; nervis utrinque oblique decurrentibus, alternis, simplicibus, subtus prominentibus notata, integerrima.

*Flores* 3-4, axillares, oppositi, sessiles, albi.

2. SPERMACOCE annua, foliis linearibus, caule strigoso.

*Radix* filiformis, fibrosa, annua.

*Caulis* spithamalis-semipedalis, tetragonus, rigide pubescens.

*Folia* opposita, linearia, strigiflora.

*Flores* axillares, sessiles, solitarii, pallide purpurei.

3. SPERMACOCE *tenuior* annua, foliis lanceolatis glabris, floribus verticillatis.

*Radix*

*Radix* fibrosa, annua.

*Caulis* tetragonus, glaber, bi-vel tripedalis; ramis alternis, superne interdum dichotomis.

*Folia* lanceolata, utrinque acuta, glabra; venis longitudinalibus, basi juncta membrana.

*Flores* sessiles, verticillati, purpurascens-albi, minutissimi.

Has tres species congeneres legi, quarum character hic est :

CAL. *Perianthium* tetraphyllum, laxum, germen coronans: *foliis* linearibus, acutis, brevibus; persistens.

COR. tubulato-campanulata, calyce longior. *Tubo* fursum latere intus piloso: ore quadridentato: *dentibus* ovatis, patulis.

STAM. *Filamenta* quatuor, corollae mox intra divisuras imposita, capillaria, corolla breviora. *Antherae* lineares.

PIST. *Germen* sub receptaculo calyce coronatum, subrotundum. *Stylus* filiformis. *Stigma* globoso-capitatum, linea bifidum.

PER. *Cortex* seminum coronatus calyce, vel nullum.

SEM. duo, ovata, hinc convexa, inde plana.

75. HOUSTONIA floribus verticillatis  
sessilibus.

*Radix*

PLANTAE AMERICANAЕ. 269

*Radix* annua, fibrosa.

*Caulis* erectus, simplex, pedalis, obsolete quadrangulus, glaber: ramis oppositis.

*Folia* opposita, ad flores verticillata, ovato-oblonga in petiolos basi latiusculos connatos ciliatos attenuata, glabra, remota.

*Flores* sessiles, aggregati, verticillati, albi: verticillis aequalibus.

CAL. *Perianthium* monophyllum, tubulatum, aequale, apice quadridentatum: *dentibus* acutis, post florescentiam majoribus, patentibus; persistens.

COR. monopetala, infundibuliformis; *Tube* <sup>203</sup> filiformis, angustissimus, calyce duplo longior; limbus campanulatus, obsolete tetragonus, quadripartitus: *laciniis* ovato-lanceolatis, acutis, basi erectis, apice patulis.

STAM. *Filamenta* quatuor, limbo corollae ad basin incisurarum inserta eaque breviora.

*Antherae* subrotundae.

PIST. *Germen* oblongum, in fundo calycis.

*Stylus* capitatus, simplex.

PER. nullum. *Calyx* tubulatus includit feminam.

SEM. bina, oblongo-linearia, hinc convexa, inde plana, glabra, calyce, paulo breviora.

Adeo-

270 PLANTAE AMERICANAE.

Adeoque facies priorum, sed calyce monophyllo, corolla extra germen non supra, et tubo longo, filiformi differt.

76. CRUZETA (CRUCITA) hispanica.

*Radix* fibrosa.

*Caulis* erectus, firmus, quadri-vel quinquepedalis, superne brachiatus; ramis erectis, oppositis.

*Folia* opposita lanceolata, utrinque acuta, integerrima, fusca.

*Flores* spicati, in paniculam collecti; ramulis alternis summitate spicatis, floribus imbricatis minimis.

*CAL.* *Perianthium* triphyllum; *foliolo* anteriore lineari, acuto; lateralibus oppositis, ovatis, concavis, intus lanuginem, corollam distinguentem continentibus, persistentibus.

*COR.* *Petala* quatuor, calycis facie, ovata, concava; exterioribus duobus integerrimis: interioribus margine piloso, lacero, tenuissimo.

*STAM.* *Filamenta* quatuor, capillaria, calyce paulo breviora. *Antherae* parvae.

*PIST.* *Germen* ovatum, obtusum, compressum. *Stylus* brevissimus, mox bifidus: laciniis patentibus. *Stigmata* simplicia.

PER.

PER. nullum. Corolla connivens decidit cum femine.

SEM. unicum, nudum.

Calycem saltem esse bracteas floris et Corollam descriptam Calycem forte quis <sup>204</sup> dicat; at sedulo idem videmus in Gomphrena et Celosia, in quibus, Florum exteriora foliola tria Calycis nomine indigitantur, quamvis spatiolo ab interioribus remota sint.

77. CHRYSOPHYLLUM. Barbaesco.

(IAQUINIA *armillaris.*)

Frutex humanae circ. altitudinis, Ramis erectis, subdichotomis.

Folia verticillata: verticillis paulo inaequalibus; lanceolato-cruciformia, sessilia, nervia, firma.

Flores in panicula terminali rara laxa; albi.

CAL. *Perianthium* monophyllum, breve, quinque-dentatum: *denticulis* obtusis.

COR. monopetala, subcampanulata. *Tabus* obovatus, ventricosus. *Limbus* decemfidus: laciniis alternis interioribus patentissimis, majoribus, convexis, obtusis; alternis interioribus dimidio minoribus, subrotundis, erectis.

STAM.

STAM. *Filamenta* quinque, plana, subulata, tubo corollae inferius adnata, eoque paulo breviora. *Antherae* oblongae, acuminatae.

PIST. *Germen* ovatum, desinens in *Stylum*, staminibus brevior. *Stigma* capitatum, nigrum, coronae instar supra quinquecrenulatum.

PER. } Fructum non vidi.  
SEM. }

Hispanis Barbasco h. e. Verbascum, ita nominatum ob vim enecandi pisces.

Alium vidi fruticem, praecedente descripto omnino similem, sed statura minore et foliis apice mucrone pungentibus diversum, cujus flores a me nondum observati.

78. SIDEROXYLON. Pacurero. (CHRY-SOPHYLLUM *Cainito*  $\varrho$ ).

*Frutex* albus, (interdum Arbor mediocris) varie ramosus: ramis lateralibus patentissimis, rectis, apice in spinam terminatis vel inermibus.

205 *Folia* inferiora saepius alterna, non raro tria vel quatuor fasciculata, superiora praesertim floralia opposita, oblonga, vel cruciformia, obtusa, basi in petiolum brevem

atte-

attenuata, supra nitida, glaberrima, integerrima.

*Flores* verticillati, conferti, axillares, breve pedunculati, albi.

CAL. *Perianthium* pentaphyllum, subrotundum: *foliis* subrotundis, obtusis, margine tenuibus; persistens.

COR. monopetala, decempartita, *Tube* laxo, brevissimo, laciniis alternis exterioribus erectis, longioribus, oblongis, lateribus incurvis, alternis interioribus brevioribus, latoribus, ovatis, acutis, conniventibus versus stylum, germen laxè obtegentibus.

STAM. *Filamenta* quinque, subulata ad basin laciniarum exter. et ab illis paene involuta, erecta. *Antherae* oblongae, incumbentes.

PIST. *Germen* globosum, parvum, in fundo corollae. *Stylus* filiformis, staminibus brevior. *Stigma* simplex.

Fructum non vidi, licet toto anno copiosissime floruerit.

*Cumanensis* PACURERO.

A *Rhamno* ergo differt calyce et situ staminum; a *Barbasco* laciniis exterioribus erectis, interioribus conniventibus et corolla multo brevior.

Suspico cuspides ferratas in Sideroxylo

Gen. Pl. 186. esse lacinias interiores  
corollae.

## 97. CONVULVULUS.

Hujus tres varietates, vel si vis species legi,  
Pistillo praecipue a Convolvulis distinctas.

1. CONVULVULUS (EVOLVULUS *nummularius*)  
foliis subrotundis, caule repente. Spec.

Pl. 157. 18.

*Radix* fibrosa, annua.

*Caules* plures, filiformes, undique diffusi, spi-  
thamales ad bipedales.

*Folia* elliptica vel ovata, acuminata, subsessi-  
lia, integerrima.

206

*Flores* solitarii, axillares, pedunculati; pe-  
dunculus folio saepe longior, in medio  
duabus bracteis acutis instructus, supra  
quos post florentiam reflectuntur tan-  
demque cadunt.

*Color* floris purpureus.

*Capsula* saepe solum disperma vel trisperma  
est.

*Styli* singuli e medio bifidi sunt.

*Habitat* in CUMANA copiose.

2. CONVULVULUS foliis linearibus acutis, cau-  
le procumbente.

Prioris forte varietas est. Differt foliis  
longe

longe angustioribus, habitu glabriore  
et floribus minutissimis, pallide pur-  
pureis.

3. CONVULVULUS (*EVOLVULUS linifolius*) fo-  
liis oblongis acutis, caule erecto, hirsuto,  
floribus subsessilibus,

*Radix* fibrosa, annua.

*Caulis* erectus, digitali-spithamalis, hirsutus.

*Folia* oblonga, acuta, erecta, sessilia, pilosa.

*Flores* axillares, solitarii, breve pedicellati: pe-  
dicello hirsuto, basi ad alas foliorum bra-  
cteolis fetaceis pilosis.

*Calyx* pilosus.

*Corolla* obsolete quinqueidentata, quinquepli-  
cata.

*Styli* quatuor vel duo, prope basin bifidi.

*Capsula* tetrasperma.

Character itaque praecedentibus communis  
fit.

CAL. *Perianthium* monophyllum erectum: fo-  
liolis oblongis, acutis, concavis; persistens.

COR. monopetala, rotata: *Tubo* cylindrico,  
brevis, calycis aetudine, sursum paulo am-  
pliore; *Limbo* plano, patente, amplo, de-  
cem incisuris parvis, emarginatis notato,  
obsolete quinqueplicato.

STAM. *Filamenta* quinque, fetacea, apici tubi  
imposita,

imposita, paulo inaequalia. *Antherae* oblongae.

PIST. *Germen* ovatum, parvum. *Styli* duo, patentes, fetacei, singulus mox bifidus, staminibus longior. *Stigmata* quatuor, obtusa.

207 PER. *Capsula* subrotunda, subovata, quadrilocularis, quadrivalvis.

SEM. solitaria, subrotunda, hinc convexa, inde plana. Convolvuli omnia, stylis et corollae limbo planiore exceptis.

80. BREYNIAE affinis arbor Oetandra.  
(CAPPARIS *Breynia*).

*Arbor* mediocris, superne ramosa; ramis teretibus, glabriusculis, novellis vero subangulatis, subcompressis, tomentoso-incanis.

*Folia* alterna, oblonga, supra glabriuscula, incana, firma, geniculata. *Petioli* tomentosi, teretes longitud. tertiae partis unciae.

*Flores* racemosi terminales, albi, *calyce* tomentoso.

CAL. *Perianthium* quadripartitum: laciniis linearibus, corolla paulo brevioribus, basi crassioribus, sinibus obtusissimis; persistens.

COR. tetrapetala, basi fere connata; subquadrangularis: *foliis* lineari-ovatis, erectis,

rectis, apice patulis, planis, intus pubescentibus.

STAM. *Filamenta* octo, subulata, corolla sequilongiora. *Antherae* lineares.

PIST. *Germen* ovatum, striatum, columna filiformi staminibus longiore elevatum. *Stylus* nullus. *Stigma* planum, obtusum.

Fructum non vidi: Facie ad Breyniam, Spec. Pl. 503. accedit, ab illa tamen ceterisque Ord. nat. XXXI. staminibus octo ad Corollam proportionalibus distinguitur, dum reliquae 15-70 gaudent. A Breynia praecise calyce simplice, nec duplice, ut et corolla erecta; petalis linearibus differt.

*Hispanis* PALO DE VENADO h. e. lignum Cervi.

*Habitat* juxta PURNEY missionem Pirituensium.

81. RIVINIA Octandra.

*Frutex* duplae vel triplae altitudinis humanae, inter alias arbores elevatus, lignosus.

*Folia* alterna, oblonga, biuncialia, acuta, glabra, vix sensibilibiter crenata, venosa; petiolis semuncialibus. 208

*Flores* in racemis digitalibus, lateralibus; pedicellis sparsis, absque bracteis; albi.

**CAE.** *Perianthium* tetraphyllum, patentissimum, reflexum: *foliis* oblongis, concavis, coloratis, persistentibus; sub interioribus squama utrinque una minutissima, subulata.

**COR.** nulla, nisi calycem velis.

**STAM.** *Filamenta* octo ad duodecim, capillaria, corolla paulo breviora, erecta. *Antherae* oblongae, compressae, basi bifidae.

**PIST.** *Germe*n oblongum, compressum. *Stylus* vix ullus. *Stigma* crassiusculum, multifido lacerum

**PER.** *Bacca* oblonga, paulo compressa, calyce reflexo infidens, glabra.

**SEM.** unicum, oblongum, compressum, glabrum.

A *Rivinia humili* diversa staminum numero. *Bacca* matura nigra est; figura rotundior, rugosior et *Semina* angulosa.

*Habitat* in depressis pascuis juxta CUMANA.

82. TRIBULUS. maximus.

*Radix* annua, fibrosa.

*Caules* diffusi, longi, articulati; ramis alternis procumbentibus.

*Folia* opposita, pinnata; foliolis trijugatis cum

PLANTAE AMERICANAЕ. 279

cum impari, elliptico-ovatis, sessilibus.

*Stipulae* lanceolatae, erectae.

*Flores* alterni, axillares, erecti.

*Fructus* deflexi.

*Pedunculi* foliis paulo breviores.

*Corolla* alba.

CAL. *Perianthium* pentaphyllum, patenti-erectum; *foliolis* oblongis, acutis, concavis, foras pilosis.

COR. *Petala* quinque, subrotunda, obtusissima, sessilia, marginibus incumbentia, hemispherice concava, truncata apparent.

STAM. *Filamenta* decem, corolla paulo minor; ultima breviora. *Antherae* subrotundae.

PIST. *Germen* ovato-conicum, decemstriatum, 209 filamentorum altitudine. *Stylus* nullus.

*Stigma* unicum, obtusum.

PER. *Capsula* ovata, calyce major, terminata stigmate striato persistente, decemlocularis, decaesperma.

SEM. solitaria, hinc convexa, inde acuta, compressa, recta, angulo acuto.

Facies exacte Tribuli est. Tribulus est capsula inermi hinc intermedia inter *Fagoniam* et Tribulum.

*Habitat* in pratis ad CUMANA.

83. SPONDIAS. *lutea* Hobo *hispanis*.Chryfobalani varietas *d. Spec. Pl.* 513. 1.Hobos *C Bauh pin.* 417. 5. 446. 6.*Labat voyage part.* 6. c. 8.*Arbor* sat magna, trunco-erecto; superne laxe ramosa, cortice ramoso, superne in ramis majoribus tuberculoso, scabro.*Folia* alterna, pinnata cum impari: *foliis* subovatis s. oblongis, acutis, margine inferiore rectiore*Flores* copiosissimi, sessiles in racemis compositis: ramis patentissimis (ut in *Vite*), *Bracteae* nullae.*Corollae* albae.*Drupae* luteae, odore suavi sed graveolente.

CAL. nullus, nisi margo minimus, obsoletissime quinque-dentatus, colore corollae, persistens.

COR. *Petala* quinque, oblongo lanceolata, secunda, inferne versus pedicellos conniventia, apice introrsum puncto acuto, incurvo communiter notata.*Nectarii* squamae decem, obtusae, minimae, singulae intra singula filamenta.STAM. *Filamenta* decem, setacea, erecta, paula, corolla paulo breviora. *Antherae* oblongae.

PIST.

PIST. *Germen* receptaculo immersum, oblongum, saepe abortiens, unicum. *Styli* quinque (non raro quatuor), brevissimi, paralleli, conniventes in columnam pentagonam vel tetragonam. *Stigmata* simplicissima.

PER. *Drupa* oblonga, glabra, carnosae, unilocularis. 210

SEM. *Nux* oblonga, durissima, lignosa, extus fibrosa putamine crasso, obsolete quinquangulari (vel 4-angulari), quinquelocularis (vel 4 locularis) *loculis* teretibus, cylindricis, curvis: *nucleis* cylindricis, curvis.

*Habitat* in CUMANA culta, copiosissime vero silvestris in adscensu montis citra fluvium.

*Spondias* descr. Gen. Pl. 402. vel *Monbin*

Plum. quoad florem sat bene convenit cum flore Hobo; sed fructus ibidem descriptus propior videtur Cedro cuius character, supra dedi. An itaque cum Cedro nominata Hobo et Chrysobalanum inter se sat similitudinis habeant, confusio aliqua Auctorum in his describenda orta erit,

*Acayam* Marcgrav. et *Acayam* Labat (qui Cedro idem) eadem origine gaudere easdemque significare arbores, opinor.

## Sectio Tertia.

## OBSERVATIONES

Genera Plantarum illustrantes.

## 84. TAMARINDUS. Gen. Pl. 42.

CAL. *Perianthium* - - - *foliis* oblongis, concavis, superiore reliquis paulo latiore.

COR. *Petala* tria, lanceolata, basi complicata, intra basin folioli calycis latioris, omnia ad latus superius patentia, undulata, venosa; intermedio angustiore et brevior.

*Nectarii* setae duae sub filamentis, breves.

STAM. *Filamenta* tria, ex inferiore calycis parte vacua, ascendente, ad medium connata in unum corpus: laciniis subulatis. *Antherae* oblongae, utrinque acutae, antice planae.

211 PIST. *Germen* lineare, arcuatum, *Stylus* filiformis, incurvus, ascendens, leviter compressus. *Stigma* obtusum, crassiusculum,

SEM. unum, duo, vel tria.

*Petala* lateralia utrinque ex imo folioli  
supe-

superioris calycis et petalum intermedium e regione ipsius folioli superioris prodeunt.

Staminum membrana a petalis ad inferiorem Germinis partem extenditur.

85, CISSUS. *Amoenit acad.* 4. p. 889. n. 1039.

Vidi tres species Americanas, amicissime in omnibus partibus floris et fructus consentientes, quasque proximas et vix distinguendas esse autumo, licet Characteri Cissi. l. c. non respondeant. Praeterea Bacca gaudent monosperma, qua carent Hedera et Vitis, vixque crediderim Dn. MITCHELIUM, has meas nomine Helicis intellexisse.

En Characterem specierum Americanarum.  
 CAL. margo brevissimus exstans l. patulus, subinteger, obsoletissime quadridentatus, medium Germinis cingens.

COR. *Petala* quatuor, oblongo-ovata, minima, convexa, crassiusculis, lateribus incurvis; distincta, erecta.

*Nectarium*: margo acutus, brevissimus, coronans vel cingens Germen intra stamina, obsolete quadrangulus, quadrifariam (pro staminibus) obsolete emar-

284 PLANTAE AMERICANAE.

emarginatum, intus pilis aliquot raris refertum.

STAM. *Filamenta* quatuor, subulata, corolla paulo breviora, patula, extus nectario inserta, e regione petalis correspondentia. *Antherae* oblongae, parvae.

PIST. *Germen* fundo Nectarii immersum. *Stylus* erectus subulatus, staminum altitudine. *Stigma* acutum, simplicissimum.

PER. *Bacca* globosa, umbilicata, glabra.

SEM. unicum, ovatum, acuminatum.

Inflorescētia est cymosa.

86. SPIGELIA. *Gen. Pl.* 160.

212

CAL. *Perianthium* monophyllum, tubulatum: apice quinque-dentatum - - -

COR. monopetala, tubulata, quinqueplicata, calyce triplo longior. *Tubus* cylindricus, calycis longitudine. *Limbus* campanulatus, plicatus, quinque-dentatus: dentibus acutis, ovatis, erectis.

STAM. *Filamenta* quinque, capillaria, ad apicem tubi limbo inserta, limbi mediae longitudinis, apice paulo incurva. *Antherae* lineares, supra basin filamentis affixae.

PIST. *Germen* subrotundum, parvum. *Stylus* filiformis, longitudine staminum, a medio sursum

furfum incrassatus, subulatus. *Stigma* acutum.

PER. *Capsula* didyma vel duae coalitae, subrotundae, uniloculares, univalves.

SEM. nonnulla (8-9), angulata, in orbem imbricata, supra receptaculum feminum nuda, foras convexa, margine acuto, subrotundo, crenulato, intus pro varia compressione feminum angulis 3. 4. 5. notata.

87. CONVULVULUS et IPOMOEA.

*Gen. Pl.* 157. 158.

Saltem indigitare volui hic haberi plures species *Capsula* quadriloculari, quadrivalvi: Seminibus solitariis, ovatis, hinc convexis inde angulatis.

Quoad reliqua difficile limites horum Generum indagantur, quum *Corolla*, *Calyx* et *Stigmata* gradu alterutrius censum intrant.

88. CORDIA. *Gen. Pl.* 1002.

Tres Species fructificatione affines, *Corolla* licet et *Calyce* diversas legi, quas, ob *stylum* dichotomum, quadrifidum, et *Drupam* parvam ex genere *Cordiae* esse non dubito, nullam tamen ex plantis Plumieri in *Spec. Pl.* p. 60 et 16 relatis esse autumo.

Etam

etiam ergo Fructificationis harum tradam descriptionem. Forte enim species Plumieri in aliqua fructificationis parte distincta sit. *Cantara* nom. vulg. (*Gerascanthus* Brow. 170.)

213 CAL. *Perianthium* oblongum, tubulatum vel obverse ovatum, decem striatum; ore tridentato (interdum 4. dentato) *dentibus* obsoletis obtusiusculis, subinaequalibus; persistens etc. secund. Msc. descript. *Drupae* uvas imitantur figura externa; immaturae fere candidae sunt & pellucidae, immargaritarum instar. Proxima

videtur. Characteris *Cordia*. Gen. Pl. 102.

β) *Cariquilla* *madro* nom. vulg. & *Lantana*.

CAL. etc. conf. Msc. deser.

γ) *Cariquillo* *prieto*.

CAL. etc. conf. Msc. deser.

89. CAPSICUM. Gen. Pl. 195.

412 XIX. *CONITORUM*ordo *MURICUM*ordo  
STAM. . . . . *Antherae* . . . . . longitudinaliter  
dehiscetes. Hinc vix connivent *Antherae*.

90. SOLANUM. Gen. Pl. 196.

STAM. . . . . *Antherae* . . . . . apice punctis  
duobus dehiscetes.

Nota.

*Nota.* In omnibus, quas vidi hujus  
Generis speciebus in America, *Anthe-  
rae* apice fuere perforatae, non vero  
sibi omnem omnes conniventes nec contin-  
gentes.

91. CESTRUM. *Gen. Pl.* 188.

In specie Cestri floribus sessilibus *Spec. Pl.*  
191. 2. quae hic Hediondo h. e. foetida  
audit, (nescio cur), stamina vidi omnino  
sine denticulis introrsum emissis.

Praeter baccam, a Lycio distingui videtur sta-  
minibus corollae tubo toti longitudinaliter  
affixis.

92. CONOCARPUS. *Gen. Pl.* 193.

Flores omnes in capitulo globoso collecti,  
hermaphroditi sunt.

93. CONTORTORUM ordo naturalis XXIX. 214

*Philos. Botanica* p. 31.

Alit hic Americae tractus plurimas hujus  
ordinis plantas, determinatu difficillimas;  
quales sunt plantae pentandrae, quae se-  
cundam constituunt subdivisionem. Ultra  
duodecim

duodecim legi species, in hac Americæ parte, sed nullam, qua fructificationem, alteri exacte similem. Has quidem ad præfixa retuli Genera, licet in præfenti, de his quid dicere nequeam, quum dimidia solum pars a me hætenus descripta sit. At vero, haud abs re esse existimaverim, hæc loci de natura genitalium paulo præferari, cum hic in Pentandris digynis tam mire sint coalita, ut participare videantur cum Monodelphis non minus, quam Gynandris.

*Nectarium* interius communiter cylindricum vel pentagonum, versus apicem externe Antheras gerens, apice ipso plerumque obtuso, glabro gaudet.

Tubus hujus Nectarii non nisi ex conjunctis filamentis constat, licet non diffitear basin horum a Nectario exteriori ortam esse, ut clarius in *Asclepiade Spec. Pl. 205. 9.* gaudente nectario exteriori quoque per *Columellam* elevato, patet.

Apicem vero hujus interioris Nectarii stigma pistilli esse multiplice argumento ad credendum inducor, nam germinum geminorum styli distincti sursum semper substantiæ apicis Nectarii inseruntur et præterea in plurimis hujus ordinis, rimas ullas, ne oculo quidem armato vidi. Hinc necessario sequeretur

queretur foecundationem ex antheris fieri  
pollinis infusione supra apicem Nectarii,  
qui stigma est.

In certa tamen Specie, Nectarii hujus apex sur-  
sum erigitur et bicornis evadit, in signum  
pistilli duplicis. Hocce posito, facilis fit  
combinatio et magis consona convenientia  
inter Monogynas et Digynas hujus ordinis  
plantas, nempe quod pistilli basis duplex  
sursum conjungitur in unitatem, vel inferius  
per stylos ut in Monogynis, vel superius per  
stigma ut in Digynis. Ceterum combinatio  
Stigmatis cum staminibus, clare, ut opinor,  
patet ex Ceropogia, cujus Stigma, simile  
quid habet cum Stigmate Digynarum, licet  
Stylus Monogynus.

Haec ex solis plantis Americanis posse conclu-  
di, mihi met visum est. An eandem servent  
concordiam Species europae, inquirendum  
linquo autoptis.

● CEROPEGIA *Gen. Pl.* 222.

215

Species binas novas, ad hoc Genus proxime  
accedentes legi, quae in fructificatione sat  
differentes et inter se et ad species sunt.  
Descriptionem sistam utriusque.

● CEROPEGIA floribus erectis fasciculatis sub-  
sessilibus, calycibus simplicibus. *Spec. nova.*

VOL. II.

U

CAL.

CAL. etc. conf. Mscr. descr.

γ) CEROPEGIA calycibus involucri proprio auctis. *Spec. nov.*

CAL. etc. conf. Mscr. descr.

*Nota.* Hae ergo plantae conjungunt species monogynas et digynas in ordine hoc naturalissimo. Harum Stigma sat bene explicat Stigmata reliquarum digynarum.

PERIPLOCA *Gen. Pl.* 225.

Hujus generis quatuor, ut opinor, Species novas distinctasque, a plantis *Spec. Pl.* in flore sat diversas, legi, quoad fructificationem distincte describam.

α) PERIPLOCA foliis oblongis acuminatis; floribus axillaribus spicatis umbellatis; caulibus glabris implicatis. *Spec. nov.*

CAL. etc. vide Mscr. descr.

β) PERIPLOCA foliis cordatis, caule pubescente, inferius cortice fungoso ramoso; floribus sessilibus. *Spec. nov.*

CAL. etc. conf. Mscr. descr.

Nectaria ideo hujus ad Periplocam accedunt, sed

γ) PERIPLOCA foliis ellipticis obtusis glabris, floribus spicatis umbellatis. *Spec. nova.*

CAL. etc. conf. Mscr. descr.

Nectario

Nectario magis discedit.

91) PERIPLOCOIDES. *Desc. inter genera dubia.*

Hujus Corolla tubulato-campanulata: nectarium exterius connivens includit Corollam genitalium, qua a reliquis differt.

92) CUSCUTA. *Gen. Pl.*

Praeter Epithymum flore quinquefido observatum in Hispania, duas insuper legi Species Americanas itidem flore quinquefido semper instructas, cum Stylo duplici. Harum altera Species floribus gaudet pedunculatis, fasciculatis. Corolla dentes habet longos, patentes valdeque acutos, qui in aliis speciebus breves sunt & obtusiusculi. Corollae figura in una specie ovata est, in in altera specie et Epithymo europaeo, campanulata.

216

95) GOMPHRENA. *Gen. Pl. 233.*

Differentias veras characteristicas inter Gomphrenam, Achyranthem et Celosiam vix reperio, adeo ut fere dubius haeream, quo referri debeant tres Species Americanae, commune quid in fructificatione habentes, sed in aliquot partibus et a Characteribus et inter se invicem differentes. Harum quidem

quidem duae ad Gomphrenam relatae in Spec. Pl. 224. 6 et 325. 8. at differunt ratione, in subsequentibus demonstranda descriptionibus. Secunda nempe fructificatione conjungit primam et tertiam. Aliam in Generib. dub. proposui.

α) GOMPHRENA foliis carnosis obtusis, capitulis oblongis terminalibus. Spec. Pl. 224. 6. CAL. etc. conf. Mscr. descr.

β) GOMPHRENA caule repente, foliis lanceolatis ovatisque, capitulis ovatis axillaribus sessilibus. Spec. Pl. 225. 8. CAL. etc. conf. Mscr. descr.

γ) CELOSIA etc.

CAL. confr. Mscr. descr.

In Hispania legi harum specierum alteram, caule diffuso, foliis ovatis planis, capitulis unilateralibus, sessilibus (an *Achyranthes caule repente* Spec. Pl. 205. 4?). Hujus stamina eodem modo sita sunt ac in specie. (α)

96 BROMELIA. Gen. Pl. 312. In duabus a me examinatis speciebus, nullum videlicet nectarium, nec Corolla proprie tripetala dici potest, quum ad basin cohaereat, et in altera specie, Corolla nonnisi ad medium divisa.

Character, secundum mea observata, hic est.

CAL.

CAL. *Perianthium* triphyllum, trigonum; Germini incidens: *foliis* oblongis, erectis.

COR. tubulata, tripartita, obsolete trigona: *laciniis* linearibus, erectis, apice patulis, calyce longioribus.

217

STAM. *Filamenta* sex, subulata, corollae versus inferiora adnata eaque breviora, quorum alterna conjungunt lacinias corollae. *Antherae* lineares, acutae.

PIST. *Germen* etc. ut in Gen. Pl.

OBS. Stamina alterna ipsas lacinias corollae combinant, adeo ut perfecte monopetala sit.

Calyx in certa specie deciduus vel cum flore evanescit.

97. RHEXIA. *Gen. Pl.* 375.

Ex specie Americana, *Rhexia* calycibus foliisque hispidis, herbacea, quae Osbeckiam (cujus specimen ad me misit Osbeckius in Hispania) facie et fere fructificatione quodammodo refert, concludere licet, maximam haec duo genera intercedere affinitatem.

Meae speciei stamina non fuere declinata, sed erecta, filamentis ante florescentiam introsum conduplicatis.

98. PAULLINIA. *Gen. Pl.* 393.

CAL. *Perianthium* pentaphyllum, inaequale:

*foliis* concavis, oblongis, coloratis; exterioribus oppositis lateralibus subrotundis, parvis; dorsali oblongo, majoribus anterioribus similibus dorsali; persistens

**COR.** *Petala* quatuor, obverse ovata, oblonga, calyce longiora, e sinibus calycis dorsali.

*Nectarium* tetraphyllum: *foliis* apice crassiusculis, bifidis, petalorum ungui insertis, latere versus foliolum dorsale calycis omnibus connatis, calycis longitudine.

**STAM.** *Filamenta* octo, fubulata, approximata, quorum tria superiora breviora a nectario obteguntur; inferiora quinque ad finem corollae inferiorem nuda, longiora. *Antherae* parvae, oblongae.

**PIST.** *Germen* oblongum, obtusum. *Styli* etc. ut in Gen. Pl. l. c. adeoque solo fere calyce pentaphyllo et nectario foliolis omnibus connatis (quae nota an omnibus communis speciebus, nescio) realiter differt a *Cardiospermo*.

215

*Capsula* magis carnosa, in aliis fere membranacea, vacua ut in *Cardiospermo* est, sed semper angustior.

99. **CARDIOSPERMUM.** *Gen. Pl.* 394.

Circa hanc plantam pauca observavi, quae  
charact.

charact. Gen. l. c. non attingit, necessaria tamen ad exactius distinguendum hoc genus a proxima Paulinia.

COR. *Petala* inferiora remotiuscula.

*Nectarium* - - - foliolis basi petalorum innatis, superioribus duobus subovatis, apice conniventibus connatis, ex apice introrsum et deorsum demittentibus lacinias lineares obtusas, latere connatas, obtegentes glandulas duas subrotundas, innatas basi interiori floris, majusculas; inferioribus duobus obverse ovatis, simplicibus, remotiusculis, solutis.

STAM. tria, superiora, quinque inferiora, etc.

100. BAUHINIA. *Gen. Pl.* 406.

Vereor ut omnes species exacte in fructificatione conveniant. Calycem nullum inferius dehiscentem vidi, nec adeo sterilia. Interim in specie una (*Spec. Pl.* 374.) Corolla pentapetala fuit, tubulata et erecta; in altera (aculeata) Corolla pentapetala, patienti-plana; ambae vero petalis planis nec undulatis.

BAUHINIA *scandens* caule cirrhifero *Spec. Pl.*

374. U 4 CAL.

**CAL.** *Perianthium* monophyllum, ovatum, latidixum, striatum, apice summo contractiore, basi quinque-dentato; subbilabiatum, videntibus setaceis, sinibus obtusis: duobus superioribus, a tribus inferioribus sinu utrinque profundiore, acuto, distinctis.

**COR.** *Petala* quinque, erecta, apicibus lineari, biteretibus, pubescentibus: *Laminibus* obovatis cum acumine, calyce duplo triplove longioribus: horum quatuor inferiora fere in eodem plano posita, aequalia; quintum superius paulo brevius, lamina angustiore, ungue vero latiore gaudet.

**STAM.** *Filamenta* decem, soluta, subulata, calyce breviora; horum quinque exteriora in eadem serie cum petalis inserta; interiora quinque alterna. *Antherae* subrotundae.

219

**PIST.** *Germen* oblongum, pubescens. *Stylus* subulatus, crassiusculus. *Stigma* obtusum, subcapitatum.

β **BAUHINIA** aculeata. *Spec. P.* 374. 2.

**CAL.** - - -

**PER.** *Legumen* oblongum, compressum, planum.

**SEM.** subrotunda, compressa.

101. **PARKINSONIA.** *Gen. Pl.* 407.

QUA

Praeter

Praeter vulgarem speciem in Hortis Europae non infrequentem, alteram, ni fallor, hic observavi floribus ejusdem gaudentem, sed facie, foliis etc. valde dissimilem, cujus tamen exactam, non possideo descriptionem; primis namque accessus mei diebus in hanc terram, floruit, copiaque plantarum visendarum obrutus, omnia perfecte notare haud

α) PARKINSONIA foliis pinnatis pallidis planis.

β) PARKINSONIA foliis conjugatis incanis.

PER. *Legumen* lineare, lanceolatum, planum, membranaceum, medio oblongum, protuberans.

SEM. unicum, oblongum, utrinque obtusum.

102. POINCIANA. *Gen. Pl.* 409.

CAL. deciduus, coloratus.

COR. *Petala* quatuor, subrotunda, fere aequalia, patentia, divaricata; *Unguibus* linearibus, superne latioribus; quintum superius (non infimum, quia foliolo infimo Calycis oppositum) erectius (non patens), longitudinaliter convolutum; *Lamina* mucronata.

PIST. . . . *Stigma* obtusum simplex.

103. GUAJACUM. *Gen. Pl.* 410.

Species duas legi fructu inter se diversas et  
Drupa diversissima. Character secundum  
plantas a me visas, est sequens.

CAL. *Perianthium* pentaphyllum, patens; fo-  
liolis ovatis, duobus exterioribus paulo mi-  
noribus, deciduis.

COR. *Petala* quinque, ovata vel subrotunda,  
obtusa, patentia; *Unguibus* linearibus.

220 STAM. *Filamenta* decem, subulata, receptaeu-  
lo inserta, parallela. *Antherae* oblongae.

PIST. *Germen* superne latius, (sessile), angu-  
latum, obtusum, acuminatum. *Stylus* bre-  
vis. *Stigma* simplex, acutum.

PER. Fructus angulatus, angulo singulo uni-  
loculari, compresso.

SEM. solitaria, oblonga, dura.

Differunt inter se hae duae species in Ca-  
lyce: foliis tribus interioribus subro-  
tundis et ovatis; in Corolla: *Ungui-  
bus* longioribus et brevioribus. *Lamina*  
subrotunda, magna vel obverse ovata:  
*Staminibus* inaequalibus et aequalibus  
pubescentibus et glabris: *Germine*  
pentagono et trigono; *Fructu* penta-  
gono et quinquelabiato alis membra-  
naceis

naceis et trigono triloculari. Plura in  
spec. nov. § 1.

104. MELASTOMA. *Gen. Pl.*

STAM. squamulae decem, minimae, sub fila-  
mentis calyci adnatae.

PIST. *Germen* subrotundum, calyce obvolu-  
tum (non sub receptaculo floris). *Stylus* fi-  
lififormis, rectus. *Stigma* obtusum.

PER. *Bacca* - - - coronata margine cylindra-  
ceo, (in specie quadam Americana) quia-  
quedentato.

105. MALPIGHIA. *Gen. Pl.*

In *Malpighia glabra* *Spec. Pl.* 425. 1. in ca-  
lyce sub quinto foliolo f. inferiore glandu-  
lae saepius desunt, ut in *Bannisteria*.

106. CRATAEVA. *Gen. Pl.*

CAL. *Perianthium* monophyllum, femiquadri-  
fidum, persistens, basi planum, crassum:  
*Laciniis* linearibus, obtusis, crassis, quarum  
infima paulo longior; superior minor, la-  
terales adhuc minores, sinubus obtusis.

COR. *Petala* quatuor, calycis divisuris inserta,  
oblonga, ad idem latus sursum flexa, pa-  
tentissima; horum duo inferiora dimidio  
breviora; *Unguis* filiformibus.

STAM.

STAM. *Filamenta* plura quam viginti Reliquis affinis in Polyandria adjungenda videtur.

197. PORTULACA. *Gen. Pl.* et ANACAMPSEROS. *Gen. Pl.*

Ex *Specieb. Pl. p. 445.* videre licet, nuper conjuncta esse haec duo Genera affinia. Antea in novis *Gen.* demonstravi ut opinor, Portulacastrum *Spec. Pl. 446. 4.* (ni fallor) esse proprium Genus et a Portulaca et ab Anacampserote sat distinctum. Hujus loci est, in medium proferre observata circa Genera haec antiqua, quum hac in terra tres novas species Portulacae et itidem tres vel quatuor Anacampserotidis viderim. Dr. SAUVAGES ex Portulacae alia specie, novum condidit Genus, *Trianthema* dictum, quod, ex synonymis in *Spec. Pl.* allatis, suspicor tertiam esse speciem novam mearum Portulacarum, quae hic copiose crescit. Verum nescius characteris Sauvagesii, memet ipsum explicare nequeo. Nec flores axillares, nec stamina quinque, nec stylus duplex meae sunt speciei, sed synonyma ex affe ei convenire videntur. Perfecta descriptio adest in *Spec. nov. §. . .* Hic differentes fructificationes tradam.

A) POR-

A) PORTULACAE propriae.

α) PORTULACA foliis subrotundis petiolatis, floribus axillaribus solitariis.

An *Portulaca curassavica* procumbens; flore muscoso; capsula bifurca. *Tournef. inst.* 236. *Herm. par.* 203. et 213. vel *Trianthema*.

CAL. confr. Mscr. descr.

β) PORTULACA foliis lanceolatis planis, axillis pilosis; floribus sessilibus terminalibus solitariis.

CAL. Mscr. descr.

γ) PORTULACA foliis lanceolatis oblongis terminalibus ternis; floribus sessilibus.

CAL. et confr. Mscr. descr.

B) ANACAMPSEROS.

δ) *Anacampseros* foliis oblongis planis, racemo bifido.

ε) ANACAMPSEROS confr. Mscr. descr.

Hae carent lana ex axillis, a *Portulacis* in florescentia pedunculata differunt.

108. MUNTINGIA. *Gen. Pl.*

CAL. *Perianthium* pentaphyllum, patens; foliis lanceolatis, acuminatis, persistentibus.

COR. *Petala* quinque, obovata, longitudine

Calycis, etc.

STAM.

STAM. *Filamenta* (brevissima), corolla breviora etc.

109. CLUSIA. *Gen. Pl.* 502.

In itinere ad missiones Pirituenses copiam Arborum harum altissimarum scandentium, vidi, cum copia florum deciduorum ubique in via ad montem umbrosissimum juxta Popul. vulgo Tucugo, at ex altero harum individuo caeso, ut ex ramis cacuminis flores recentes decerperem, differentiam non minimam in partibus deprehendi Fructificationis inter Flores antea casu lectas in via et hos recentes, praesertim in genitalibus, uterque tamen in Calyce et Corolla amicissime conveniebat.

CAL. utrique *Perianthium* hexaphyllum, patens: *foliis* oppositis, imbricatis, interioribus per paria opposita longioribus, concavis, patentibus, persistentibus.

COR. utrique *Petala* quinque, patentissima, calyce majora, basi crassiora, oblonga, in medio leviter contracta, apice subrotunda, integra.

\* Individuum floribus recentibus, nullum habuit

Nesca-

*Nectarium* nisi congeries Staminum ita vocari debet.

STAM. *Filamenta* nulla. *Antherae* viginti octo ad triginta, sessiles, contiguæ, angulatae, in acervum quinquangularem supra planum congestae, vix a se invicem distinguibiles, in singulo margine elevato, obtuso Succo glutinosissimo praegnantes; in medio impressio absque glutine, non fariniferae, quantum vidi.

Hinc forte nectarium potius exit, sed tum stamina deficiunt.

*Germen* ut in *Gen. Pl.* ab hoc acervo includebatur.

\* *Flores* in via inventi, habuerunt

STAM. *Filamenta* plurima, subulata, patula, basi connata in membranam.

*Germen* et acervum Nectarii non vidi.

Fructus tamen copiosi, quales in *Gen. Pl.* 223 describentur. An erit floribus masculinis et femininis distinctis fortassis alia occasione certiora dicere valeo.

Calyx similis *Lecyathi nov. gen.*

110. MENZELIA. *Gen. Pl.*

CAL. *Perianthium* pentaphyllum etc.

STAM. plurima, capillaria, exteriora sursum plana,

plana, membranacea, obtusa. *Antherae* parvae, subrotundae.

### III. MIMOSA. *Gen. Pl.*

Hujus viginti species florula mea ad hunc diem numerat, magis autem diversum Genus in fructificatione fateor me vidisse nullum; nempe praeter corollam, stamina, legumina et semina, differunt in numero, cohaesione, situ, figura, proportione.

Quinque differentes vidi Fructificationes modos, nempe.

a) *Perianthium* monophyllum, quinquedentatum.

COR. monopetala, quinquefida, calyce altior, lateribus internis calycis inferius adhaerens.

STAM. *Filamenta* numerosa, quadraginta ad quinquaginta, longissima, capillaria, inferius saepe ad medium connata in tubum, ut in Monadelphia.

*Legumen* teretiusculum.

Hujus familiae sunt Mimosa *Inga* Spec. Pl. 516. 2. *bigemina* 5. *Unguis Cati* 6. et Catal. Mscr. 221. 225. 229.

*Semina* in his duobus ultimis sunt calyptra f. arillo proprio a cortice vel carne leguminis distincta, pilosa, spongiosa involuta, quibus

PLANTAE AMERICANAE. 305

bus hae species foliis bigeminis ab altera Inga differunt.

β) *Perianthium* monophyllum, quinquedentatum.

COR. pentapetala; petalis vix basi cohaerentibus, calyce longioribus.

STAM. decem vel quinque, corolla sesquilon-  
giora, setacea.

*Legumina* plana, linearia, bivalvia.

Hujus familiae sunt *Mimosa cinerea* et affines.

γ) *Perianthium* monophyllum, bi-vel quinque-  
dentatum.

COR. monopetala, quinquedentata.

*Filamenta* plurima (quadraginta), libera, co-  
rolla duplo longiora, recta.

*Legumina* planiuscula, linearia.

Hujus familiae sunt *Mimosa Farnesiana* et af-  
fines.

δ) *Perianthium* tri-vel quadridentatum.

COR. nulla.

STAM. octo vel quatuor, filiformia, recta;  
quatuor longiora.

*Legumina* articulata discidentia, margine -

ε) *Perianthium* monophyllum, quinquefidum.

COR. pentapetala, subpapilionacea, petalis in-  
ferioribus longioribus; saepe reflexa, dorso  
compressa.

STAM. decem, decumbentia, corolla longiora.

*Legumen* compressum, utrinque ad alterutrum  
latus incurvum, contractum.

224 112. CORCHORUS. *Gen. Pl.*

Duas legi Species capsula triloculari, quibus  
COR. sub vigore florescentiae patens.

PIST. . . Stigma simplex, obtusum.

PER. *Capsula* linearis, trivalvis, trilocularis.

Duae species distinguuntur capsula tereti,  
subtriangulari, et capsula triangulari,  
angulis bimembranaceis (TRIUMFETTA  
*Brov. 232. t. 25. f. 1.*)

113. ANNONA. *Gen. Pl.*

In specie Annonae glabrae. *Spec. Pl. 534.*  
quam solam hucusque ex hoc Genere flo-  
rentem inveni, observati.

CAL. *Perianthium* triphyllum, minimum: *folio-*  
*lis* triangulatis, acuminatis.

COR. *Petala* sex; tria exteriora magna, erecta,  
linearia, dorso carinata, intus plana.

PER. *Baccae* . . . cortice glabro, obsoletissi-  
me reticulato.

114. CRANIOLARIA. *Gen. Pl.*

In specie prima *Spec. Pl. 618.* videtur spa-  
tha calycis potius esse Perianthium et setae  
sub-

PLANTAE AMERICANAE. 307

subjectae (ex mea autopsia solum duae) bracteolae calycinae, quales in aliis plantis saepe deprehenduntur.

CAL. conf. Mscr. descr.

115. BIGNONIA. *Gen. 1P.*

225

Ex quinque vel sex speciebus a me in America visis, unicam tantummodo describam, cum illa a reliquis flore fructuque consimilibus valde differat. Est haec *Bignonia paniculata* *Spec. Pl.* 623. 5.

CAL. etc. conf. Mscr. descr.

116. CRESCENTIA. *Gen. Pl.*

COR. *Tubus* laxus, gibbus, curvus, infra plica transversali obtusa; procumbens: laciniis acutis: superioribus longioribus, revolutis, inciso-laciniatis

STAM. *Filamenta* quatuor, filiformia, tubicorollae longitudine, parallela (non patentia), sub dorso corollae. *Antherae* incumbentes, bipartitae, utrinque acutae.

PIST. *Germen* sessile (non petiolatum sed cinctum margine glanduloso, obtuso, cui corolla infidet, quae fructu excrecente baccam levissime pedicellatam efficit, quum non excreverit cum Germine; sed hoc vix manifestum est), oblongum. *Stylus* filiformis,

mis, staminibus situ et longitudine aequalis.

*Stigma* foliaceum, erectum, ovatum, bipartitum : *laciniis* planis, parallelis.

*Bacca* . . . maxima, cortice duro, pulpa succosa spongiosa.

SEM. subovata etc.

604 117. BARLERIA. *Gen. Pl.*

Hujus generis species nova mihi visa fuit

Planta annua subprocumbens, brachiata ;

spicis ovatis, tetragonis : bracteis integris.

Fructificatio hujus ita se habet.

CAL. *Perianthium* etc. conf. Mscr. descr.

118. SIDA. *Gen. Pl.*

Ad hoc genus relata *Sida capitata* *Spec. Pl.*

685. 10. capitulis septemfloris, quae hic

loci (si eadem sit et ni fallat memoria,

Planta Hort. Vpsaliensis, descripta in Actis

Vps.) saepius triflora et involucrata est.

Duas insuper species novas, *unam* foliis

palmatis, rugosis, villosis ; *alteram* foliis li-

neari lanceolatis, rugosis, villosis inveni,

Involucro triphyllo, triyoro donatas. Sic

tres species involucratae sunt ; an ideo haec

plantae, inter Malvas et Sidas intermediae

propriam constituere possunt Genus ?

119. THEO;

119. THEOBROMA. *Gen. Pl.* 374.

226

120. MILLERIA. *Gen. Pl.* 814.

121. EPIDENDRUM. *Gen. Pl.*

Quinque Orchideas parasiticas in hac parte Americae legere mihi licuit, quae, ut opinor, omnes ad Epidendrum referendae sunt. Ex his tamen tres solum florentes vidi, omnes diversas, Corolla et nectario in specie quadam erectis, foliosis, nectario cornuto; reliquae ex acaulibus eo carent. Differunt inter se in figura Nectarii. Attamen magis singulare mihi visum fuit *Epidendrum nodosum* *Spec. Pl.* 953. 7. flore albo unica tantum gaudere Anthera, nec duabus uti reliquae species orchideae. An hoc in pluribus obtineat Epidendris, adhuc dum nescio.

122. HELICTERES. *Gen. Pl.* 439.

CAL. *Perianthium* monophyllum, oblongo-cylindricum, tubulatum, quinquedentatum: *dentibus* acutis, linearibus. . . . deciduum, femunciale.

COR. Petala quinque, calyce longiora: *unguibus* longis, linearibus, angustis, paulo supra basin notatis dentibus lateralibus,

X 3

oppositis,

310 PLANTAE AMERICANAE.

oppositis, utrinque solitariis, patentibus, ad se invicem fere connatis.

STAM. . . . *Antherae* lineares, curvae, incumbentes.

PIST. *Germen* columella filiformi, longissima elevatum oblongum. *Styli* quinque, longi, contorti, filiformes. *Stigmata* simplicia.

PER. *Capsulae* quinque, spiraliter lineares, uniloculares, univalves, introrsum dehiscentes, apice patulo emittunt semina.

Nescio an duae, quas vidi, sint species vel varietates: Corollae etenim color elegantissime rubens, planta viridis. fructu brevior differebat superficialiter a Corolla subcinerea, planta incana, fructu longiore.

123. CROTON. *Gen. Pl.*

Character Generis in *Gen, Pl. l. c.* universalis est. In hac Americae parte sex collegi species Crotonis, quarum fructificationes inter se licet diversae, (excepto apice in staminibus in quibusdam) concordant cum *Gen. Pl.* Species hae a me visae, in duas phalanges commode dispesci possunt, a staminibus, quae in aliis fere libera sunt, in aliis in Filamentum unum connata.

A) Staminibus fere liberis, differunt dupliciter corolla et stylis.

a) Masc.

PLANTAE AMERICANAЕ. 311

α) Masc. CAL. pentaphyllus, patens, planus :  
*foliis* teneris, lanceolatis, coloratis.

COR. nulla. *Nectarium* nullum.

STAM. plura, libera, undique patentia, calycis  
longitudine.

Fem. CAL. pentaphyllus, erectus.

COR. nulla.

PIST. *Styli* tres : singulis apicibus dichotome  
sexfidis, patentes.

β) Masc. CAL. ut in α)

COR. *Petala* quinque, plana, colorata, uti ca-  
lyx. *Nectarium* nullum.

STAM. ut in α).

Fem. CAL. ad basin fere quinquepartitus.

COR. nulla. *Nectarium*. . .

PIST. *Styli* tres, patuli: apicibus bifidis.

B) CROTON staminibus connatis in filamen-  
tum unicum.

γ) Masc. CAL. *Perianthium* pentaphyllum,  
erectum.

COR. *Petala* quinque. *Nectarii* Glandulae quin-  
que circa basin Filamenti.

STAM. *Filamenta* connata in unum.

Fem. CAL. pentaphyllus, patens, major.

COR. *Petala* quinque, calyce minora. *Necta-*  
*rium*. . .

PIST. *Stylis* ad basin fere trifidis : *laciniis* bifidis.

Europaeum *Tournefol* ab hoc differt.

*Mas* calyce quinquepartito.

*Fem.*

312 PLANTAE AMERICANAE.

Fem. calyce enneaphyllo, laxo; Corolla  
nulla.

Stylis tribus bifidis.

124. JATROPHA. *Gen. Pl.*

Nec minus in fructificatione varium est hoc

Genus. *Jatropha gossypifolia* *Spec. Pl.* 1006:

228

1. optime ibidem descripta, eadem dum  
*Jatropha Curcas* 1006: 3. gaudet fructifica-  
tione, floribus nempe instructis calyce, co-  
rolla, staminibus connatis, Nectarii glandu-  
lis quinque, Stylisque tribus, apice bifidis.  
Contra vero *Jatropha Manihot* 1007; 5. ca-  
lyce caret; corolla angulata. Styli, . . .

*Jatropha urens* itidem calyce caret, sed corolla  
hypocrateriformis.

125. HURA. *Gen. Pl.* 10 *Syst. Nat.* 6. p. 135.

Licet ex *Syst. Nat.* 1. c. character *Gen. Pl.*  
emendatus sit, ex autoptica tamen observa-  
tione novus hic sistitur.

CAL. *Perianth*, etc. conf. *Mscr. descr.*

126. MORUS. *Gen. Pl.*

Flores masculi et feminei in Dioecia, floribus  
feminis in globum aggregatis.

CAL. squamae capituli quatuor vel quinque et  
conf. *Mscr. Desc.* stylo unico longo differt a  
reliquis,

reliquis, nec calyx abit in fructum.

Folia ovato-oblonga sunt, glabra nec hirsuta; alis spina obliqua laterali.

127. VISCUM. *Gen. Pl.*

In speciebus duabus americanis, hoc genus a planta Europae differre deprehendi: harum una flores gerit ut illa in Dioecia, baccis oblongis: altera vero absolute Monoica est, baccis brevioribus. Alias, ambae habent in Flore masc. CAL. *Perianthium* tridentatum; dentibus acutis, crassiusculis, conniventibus, brevissimis.

COR. nulla.

STAM. *Filamenta* vix ulla vel brevissima. *Antherae* tres, sessiles, subrotundae.

Fem. CAL. simillimus Masc.

COR. nulla.

PIST. *Germen* oblongo-ovatum, teres, sub calyce terminali, magnum ratione illius. *Stylus* nullus. *Stigma* obtusum.

*Bacca* subconica.

SEM. ovale, compressum, obtusum, venis longitudinalibus pulchre pictum, involutum pulpa tenuissima, glutinosa.

Lectae 1754 mense Decembri etc. in itinere

- 123 SPECIES PLANTARUM observatæ in itinere a CUMANA die 17 Decembr. 1754, ad fluvium Orinoco, per Barcellonaam et Las Missiones de Piritu.
- 

## DECEMBRIS.

- XVII. 1. CASSIA alba foliis bipinnatis.  
 2. LANTANA, floribus sessilibus subaggregatis, foliis ellipticis crenatis obtusis. *Oreganos* vulgo.  
 3. KRAMERIA.  
 4. AGAVE.
- XVIII. 5. ARUM *frutescens* which had both flowers and fruit, and whose leaves stood always erect, after sunsetting.  
 I arrived at *New-Barcellona*
- XX. Near *Miguel Roxa's* country-house the following plants were found.
6. EPIDENDRUM acaule, foliis subulatis, canaliculatis, flore luteo, corolla rubroguttata.  
 7. BIGNONIA foliis pinnatis.  
 8. CELOSIA spicis interruptis conglomeratis lateralibus.  
 9. Alia vocata CORAZON, flore apetalò quadridentato triandro monogyno.

PLANTAE AMERICANAE. 317

10. MOLLUGINIS affinis, floribus paniculatis, femine unico absque flore.
11. EUPATORIUM.
12. CONVULVULUS floribus axillaribus solitariis, foliis alternis oblongis, obtusis.
15. RIVINIA florens.
14. EPIDENDRUM foliis lanceolatis planis, flore solitario.
- XXI. 15. POLYGONUM foliis subrotundis.
16. CONVULVULOIDES erecta, foliis lanceolatis dorso carinatis, fructu oblongo; scapo tri-vel quinquepedali.
17. SIDA fructu pentagono, foliis cordatis.
18. SIDA foliis cordatis ferratis acutis, flore pleno. 232
- XXII. 19. BARLERIAE herbaceae facie, capitulis imbricatis.
20. CELOSIOIDES feminis calyptra, spongiosa; copiose florens.
21. SOLANUM caule erecto suffruticoso glabro, foliis amplissimis, floribus axillaribus glomeratis.
22. TRIUMFETTA.
23. ACHYRANTHES spicis erectis.
24. PETIVERIA copiose.
- XXIII. 25. TRIOPTERIS alte scandens (Nova species forte).
26. EUPA-

26. EUPATORIUM calyce cylindrico glabro imbricato, flosculis duodecim vel quatuordecim; foliis ovatis ferratis, caule inter frutices scandente.
27. Cassia *viminea* foliis bijugatis oblongis, glandula intra infima tereti.
28. SIDA Escabilla, floribus albicantibus.
29. SIDA Escabilla, floribus luteis.
- XXIV. I returned to *Roxa's* country-house, where I found the fruit of the plants observed December 20.
30. JUSSIAEA fructu octagono.
31. JUSSIAEA fructu tetragono.
32. MELOCHIA foliis ovato-lanceolatis; capsulis quinquangulis: angulis compressis acuminatis.
33. SPERMACOCE floribus verticillatis, capitatis, albis, foliis linearibus.
34. SPERMACOCE floribus aggregatis axillaribus ex alis alternis albis, foliis linearibus, calyce quadridentato. *Planta fusca.*
35. CASSIA foliis bijugatis oblongis, glandula tereti.
36. CORAZON herba triandra, facie Atriplicis.
- 233 37. POLYGONUM (*Perficaria*) octandrum semidigynum foliis lanceolatis; stipitibus glabris membranaceis.
38. CONVULVULUS flore luteo umbellato.

XXV. 39. CASSIA foliis pinnatis; leguminibus planis horizontalibus oblongis magnis.

40. CACTUS pedunculis filiformibus, caule dichotomo sexangulari, glabro, flore sessili.

1755. JANUARI I.

40. PHASEOLUS caule volubili, floribus laxe spicatis, leguminibus arcuatis.

41. BIGNONIA flore luteo copioso.

42. SPERMACOCE floribus capitatis verticellatis.

VI. 43. TRAGIA foliis cordato-oblongis, caule volubili.

44. ARBOR heptandra, calyce monophyllo quinqueplicato obsolete quinquentato; Stylo inclinato, Stigmate penicillo adscendente.

45. EPIDENDRUM foliis lanceolatis crenatis.

VIII. 46. BAUHINIA *scandens* cirrhosa (florens) calyce monophyllo.

47. BAUHINIA aculeata, *sed absque floribus*.

48. ARBOR spinosa, ramis patentissimis floribus hypocrateriformibus sessilibus (*Pisonia?*).

XVIII. I travelled from *Barcelona* to *S. Bernardino* 5 miles south of *Barcelona*.

The road went first through a low flat country, but afterwards we were obliged to cross the most rugged hills.

In

In this province, they make not use of shoes for horses, which walk very well without them, their hoofs having a sharp strong margin, by which they can climb the steepest hills.

Between *Barcelona* and *S. Bernardino* I observed the following plants:

49. *Carnes tollenda*. Arbor mediocris, floribus luteis maximis polyandris.
- 234 50. CROTON foliis ovatis, floribus spicatis, stylis multifidis depresso-patentibus, frutescentes.
51. EPIDENDRUM acaule, foliis lanceolatis.
52. EPIDENDRUM caule teretiusculo carnosissimo, foliis oblongis, recurvo patentibus, floribus albis.
- XIX. Rosemary and Marjoram were in blossom.
53. IPOMOEA foliis pinnatis, flore infundibuliformi.
54. ERYNGIUM which was employed for eating.
55. AGERATUM flore purpureo. Parva, glabra, pedalis et bipedalis herba.
56. COMMELINA parva repens, nectariis filamentis duobus.
57. MUCO Arbor magna. Fructus ovo asserino fere major, tandem edulis h. t. apice acuminato, ovalis, cortice crassiusculo.
- Est

Est *Bacca* seminibus, in carne alba h. t. solidiuscula, nidulantibus, oblongis, paulo compressis, margine subreniformibus, cortice pergamineo, longitudinaliter fissili, rostellulo inflexo; *cotyledonibus* convolutis, rugose involutis fere uti charta fortuite complicata.

XX. In the vale south of the village, I found the following plants.

58. TRIUMFETTA. *Flores* verticillati. *Calyx* et *Corolla* patentes. *Stamina* viginti erecto-patentia. *Calycis* apices extrorsum emittunt setam subulatam.

Sunt duae *varietates*: altera, floribus et verticillis remotioribus; altera, cui flores minores, verticilli confertiores.

59. SICYOS fructu hispido longitudinaliter reniformi.

60. PISONIA (floreus.)

61. PAULLINIA foliis ternis, fructu inflato Cardiospermo aequali.

62. CUCURBITACEA scandens h. t. sine foliis cum fructibus copiosis, Melonis aemulis, rubris, glabris; cortice pergamineo, molliori, carne spongiosa; succo amarissimo.

XXI. 63. MILLERIA spec, 2. folia oblonga, duriuscula.

325

46. VALERIANA scandens caule scandente, foliis ternis, floribus lateralibus paniculatis

subdichotomis spicatis, feminibus compressis ovatis striatis: pappo plumoso. Corolla viridi-rosea, tubulata, aequaliter quinque-dentata: dentes patuli. Stamina tria.

65. PIPER frutescens, foliis ovatis ovalibusque quinquenerviis venosis.

66. PIPER frutescens, foliis cordatis undecimnerviis venosis, spicis erectis apice nutantibus.

67. JUSTICIA diandra. Diantherae affinis flore caeruleo; bracteis ternis, dorsali cuneiformi; Capsula turbinato-oblonga, compressa, biloculari, dehiscente valvulis parallelis, loculis dispermis, *facie Barleriae herbaceae.*

68. PHASEOLUS foliis ovatis, caule scandente, floribus spicatis parvis subgeminis, leguminibus retrorsum paullo falcatis, seminibus quatuor glabris oblongis albis.

69. BIDENS flore albo? feminibus quadrato-compressis duabus vel tribus fetis terminatis, paleis distinctis, floribus omnibus tubulatis; foliis oppositis, ovato-oblongis, subhastatis, duplicato serratis, petiolatis; caule debili.

70. PLANTA leguminosa, scandens, filiformis; foliis alternis, sagittatis, simplicibus, glabris, petiolo utrinque membranaceo, apice acuto; leguminibus axillaribus in racemo, (Spica quadriflora vel quinqueflora)

flora) striatis, pendulis, acutis, paulo compressis, digitalibus; seminibus tereti-obtusis, glabris, nigris.

71. DOLICHOS scandens, caule filiformi, 236

hinc inde volubili, foliis ternatis: *foliolis* oblongis acuminatis, glabris, terminatis pedicello longo unciali ab inferioribus remoto. *Flos* papilionaceus. *Calyx* monophyllus, tubo campanulato corollae adpresso quinquefido, ex inferioribus tribus, duobus lateralibus lato-ovatis, acuminatis, basi imbricatis supra basin superiorum, intermedio minimo acuto incumbenti fere lateralibus. *Corollae Vexillum* mox e calyce exiens adscendens, falcatum, dorso carinato apice bifido, lateribus revolutis, hinc a carina mox extra calycem dehiscens. *Carina* apice adscendens, apice rotundo, bifido, margine soluto et laxo solum connivente, tumidiuscula. *Ala* carinae longitudine ejusdemque flexurae. *Stamina* 10 in unum connata, supremo sola basi leviter soluto. *Antherae* oblongae, planae. *Germen* lineare, compressum. *Stylus* modice adscendens. *Stigma* obtusum, crassiusculum, acuminatum, simplex. *Legumen* compressum, digitale, paulo recurvatum, dorso angulato crassiore, antice paulo magis compresso, Y 2 rotundato

rotundato, lateribus mediis magis adhuc compressis longitudinaliter modice concavis.

72. CLITORIA foliis ternatis: floribus geminis; involucrio florum diphylo, striato, calyce quadridentato: dente superiore latiore, obtuso: inferioribus acuminatis. Legumen lineare, longum, spithamale, apice subulatum, compressum, rectum; dorso leviter obtusiore latere utroque medio longitudinaliter sulco profundo quadrato glabro exarato. Semina plura parva oblonga, juxta dorsum leguminis solum adnata.

73. SIDA Abutilon capsulis multangularibus.

74. SIDA caule simplici, foliis orbiculato cordatis; spicis erectis simplicibus longissimis.

75. SIDA (frutex Abutilon) tomentosa, foliis cordato-orbiculatis, fructibus multicapsularibus stellatis flore recurvo.

Planta cucurbitacea foliis cordatis angulato-palmatis glabris; caule angulato filiformi scandente, fructu pomi parvi magnitudine, globoso scabro eleganter variegato.

XXII. I travelled from St. Benhardino to Pilar, two miles over a high hill. From its top I discovered, to the North, the sea and its shores; and after having passed the cross, which divides the district of both the villages,

PLANTAE AMERICANAE. 325

ages, I saw, to the South, immense plains, extending to the river *Orinoco*. On this road I found the following plants.

76. *Planta orchidea flore viridi, radicibus fasciculatis.*

77. *SIDA* (*Abutilon frutescens*) foliis cordato-orbiculatis acuminatis, fructu multiplicifulari stellato.

78. *Planta inter frutices scandens; feminibus in paniculam laxam dispositis subrotundo reniformibus planis articulatim (duobus articulis) connexis* 88.

79. *CISSAMPELOS* (*Hisp. Orya de tigre*) floribus peltatis subrotundis, sed fere absque fructificatione.

XXIII. South-east of the village of *Pilar*, I found growing:

80. Arbor, indis *CRITTA* dicta (*Didynamia Angiosp.*) foliis oblongis oppositis; ramis ultimis quadratis; floribus corymbosofertis.

81. *JUSTICIA* flore caeruleo, *copiose.*

82. *COREOPSIS* (ni *fallor*) foliis palmatotrifidis oppositis; floribus corymbosis.

*AGERATUM* flore purpureo 55.

XXVII. I returned to *St. Bernhardino*.

83. MALPIGHIA foliis oblongis margine undulatis subtus subsericeis; racemis oppositis terminalibus.

*Flores* lutei. *Glandulae calycis* decem, oblongo-ovatae, connatae, magnae, *Stylus* vnicus. *Glandula* vna vel duae, altera minore, in singulo pedicello.

84. SOLANUM foliis oblongis spithamalibus alternis solitariis glabris; racemis florum terminalibus dichotomis recurvis, floribus imbricatis; caule inermi fruticoso.

*Facie accedit* ad Solanum foliis geminis, altero minore; *sed racemi in hoc terminales sunt, dichotome subdivisi.*

85. SIDA *periplocifolia* caule erecto vimineo; foliis cordato-ovatis integerrimis.

*Caulis* herbaceus, erectus, tenuis, filiformis ramis paucis remotis.

*Folia* alterna integerrima, supra viridia; infra tomentosa, incana, tenera. *Petiolus* folio saepe longior, filiformis, apice crassiore pubescente.

*Flores* in paniculis longis, sparsis, erectis.

CAL. *Perianthium* monophyllum, campanulatum, parvum, quinquedentatum, teres; dentibus ovatis, acutis, patulis.

COR. pentapetala, patens: *petalis* oblongo-subrotundis (ovalibus) paucis, calycis dupla longitudine.

STAM.

PLANTAE AMERICANAE 327

STAM. Corollae longitudine.

PIST. *Germen* subrotundum, tri-vel quadrangulare. *Styli* tres vel quatuor, basi uniti, patuli, staminum longitudine.

PER. *Capsula* calyce quadruplo major, turbinata tri-vel quadrilobata vel angulata et apicis margine lobato *lobis* obtusis, acuminatis, tandem dehiscentibus angulo.

SEM. tria in singulo.

*An Napaea?*

86. SIDA foliis cordato-acuminatis crenatis vtrinque glabris, floribus confertioribus.

*Caulis* inferne suffruticosus, vimineus, 2-3pedalis, inferne glaber, superne subincanus, tener.

*Folia* cordata, acuminata, vtrinque glabra.

*Petoli* teretes, filiformes, foliorum longitudine, superne crassiores, ex toto glabri.

*Flores* conferti ad apices ramorum. *Pedicelli* capillares. *Bracteae* tres, filiformes, dorsali latiore.

CAL. *Perianthium* monophyllum, patenti-campanulatum, teretiufculum ante expansionem, sursum quinquangulare, basi vero minime: dentibus ovato-acutis, ante et post florescentiam conniventibus.

COR. pentapetala, patentissima, calyce duplo longior; *petalis* obovatis, obtusissimis,

328 PLANTAE AMERICANAE.

dextrorsum lateraliter magis flexis, oblique obtuse emarginatis, striatis.

STAM. *Filamenta* plurima.

PIST. *Germen* subrotundum, paulo depressum. *Stylus* filiformis.

PER. *Capsula* quinquelocularis, calyce paulo minor, subrotunda, leviter depressa, vndique obtusa centro prominulo, superius quinque sulcis exarata.

SEM. compressa.

87. SIDA foliis cordato-oblongis acutis serratis, floribus solitariis.

*Caules* erectus, pedalis, herbaceus, filiformis, teres.

*Folia* alterna, cordato-oblonga, glabra, serrata: serraturis acutis. *Petiolus* femuncialis, teres, apice crasso inflexo.

*Florés* axillares, solitarii.

CAL. ovatus, sub florescentia campanulatus, vsque ad basin quinquangularis, angulis compressis; quinquefidus, laciniis acuminatis.

COR. plana, Petalis oblongis, calyce duplo longioribus, luteis.

STAM. plura, ultra medium a basi connata in columnam filiformem, superne divisam in filamenta plura capillaria.

PIST. *Stylus* filiformis, superne quinquefidus.

*Stigmata* capitata.

PER.

PER. *Capsula* calyce obtuso eoque brevior; quinquangularis, apice fetis decem, quinquelocularis, quinquecapsularis: capsulis dehiscentibus.

SEM. solitaria.

88. *Planta* (78) scandens inter frutices etc. 239  
 habet revera femina vel legumina disperma, articulata, connata, reniformia. *Folia* terna; foliolis oblongis, venosis; *petiolis* teretiufculis, pubescenti-hispidis, pilis ubique hamatis vestibus adhaerent. *Stipulae* setaceae.

Pedicelli laterales breves, ultimo quasi uncinato; squamae subalatae utrinque ad pedicellorum latera. *Caulis* quinquangularis: lateribus sulco exaratis; debilis, hispidus.

*Flores* in racemis minimis, lateralibus, ramosis; pedicellati, geminati. Flos decidit et *Legumen* biarticulatum, articulo singulo reniformi membranaceo, comprehendit singulum semen reniforme, paulo compressum.

89. PIPER foliis cordatis acuminatis, spicis superne nutantibus, petiolis basi vaginantibus membranaceis.

*Eratex* racemis alternis, terminalibus, simplicibus; *floribus* aliquot ex uno puncto f. gemmula subrotunda, vel solitariis, *pedunculis* capillaribus, bilinearibus; *Legumine* oblongo, lineari, semunciali, compresso, terminato

terminato in alam planam, ellipticam, firmam, superficie venulis parum pictam, dorso margine crassiore, basi tegmine ipso 2, 3, 4, *semina* inter tomentum isthmorum recondita. Semina oblonga, utrinque obtusa.

91. *Frutex* scandens, feminibus in corymbum positis, floriformibus, siccis, erectis. *Capsula* oblonga, nuda, obsolete quinquangularis, magis contracta, margine coronata foliolis quinque, siccis, lanceolatis, nitidis, friatis; e centro prodeunte filameno inclinato, quod absque dubio antea fuit stylus. Semen unicum oblongum, utrinque obtusum: *Dubium est an semen nudum vel capsula?*

## FEBRUARII.

II. 92. MILLERIA biflora.

*Caulis* erectus, tri-vel quadripedalis, teretiussculus, brachiatus, tenuis; *Ramis* oppositis, articulatis: articulis sursum crassioribus, magis ab uno latere.

240

*Folia* oblongo-lancelota, non ovata uncialia, venis alternis rariusculis superne impressis, deorsum prominulis, supra fusco viridia; infra pallidiora, glabra, sed pubescentia pilis primis adpressis raris; opposita, subsessilia vel brevi petiolo adnexa.

*Flores* axillares vel terminales, pedunculati, pedunculis confertis, copiosis, capillaribus, simplicibus,

simplicibus, singulis florem compressum gerentibus.

CAL. communis ad basin fere tripartitus, omnino planus, compressus, folio dorsali cordato, subrotundo, in medio protuberantia oblonga, parva: interiore altero oblique cordato, fere dimidio minore, altero latere adpresso dorsali, altero prominulo minus extenso in figuram cordatam, interno in sinu elevato, marginellis fere replicatis; oblongo brevior tertio.

COR. composita biflora; altero fl. masculo, altero femineo.

*Corollula mascula* tubulata, angusta, calycis longitudine, ore patulo quinque-dentato; dentibus acutis.

*Corollula feminea* angustissima, filiformis, ore bi-vel tridentato, erecto, striato.

STAM. *mascul.* naturaliter quinque. *Anthera* cylindrica, corolla fere minor. *Fem.* nulla.

PIST. *masc.* nullum nisi germen lineare obsoletum sub *corollula*. *Fem.* *Germen* oblongum compressum superne latius. *Stylus* filiformis, superne bifidus laciniis revoluto-patentibus. *Stigmata* simplicia.

PER. nullum. *Calyx* compressus includit semen.

SEM. unum, oblongum, obovatum, compressum, parvum, glabrum.

332 PLANTAE AMERICANAE.

In paucis floribus vidi flores masc. solos absque femineo, sed raram est.

93. *SIDA crispa* capsulis globosis inflatis etc.

*Radix* forte annua.

*Caulis* tri-vel quadripedales, mox a basi ramosi, debiles, ramis longitudine caulis, confimilibus, debilibus, longis, filiformibus, parentibus, glabris, interdum levissime pubescentibus.

*Folia* alterna, cordata, acuminata, tenera, glabriuscula, venosa, margine crenata, crenis latis obtusis; inferiora petiolata; superiora subsessilia, duplo minora. *Petioli* teretes, subpubescentes. *Stipulae* breves, subulatae, parvae.

241

*Flores* in ramulis brevibus, lateralibus; laterales alterni, solitarii vel ex apice pedicelli.

*Pedunculus* capillaris, patens, simplex, versus apicem articulo instructus, exteriore leviter crassiore, subpubescenti.

*CAL.* *Perianthium* monophyllum, patens, convexum, quinque angulis ad basin angulatum, quinquefidum: laciniis ovatis, acutis, albescenti-canis.

*COR.* calyce sesquiduplo longior, plana, patens: petalis subrotundis.

*STAM.* plura, in columnam connata teretem, postea divisa, patenti-incurva, corolla breviora. *Antherae* subrotundae.

PIST.

PIST. *Germen* subrotundum. *Styli* decem, primum erecti (vix conjuncti), demum patentes, longitudine staminum, capillares. *Stigmata* simplicia.

PER. *Capsula* globosa, pendula, decemangularis, inflata, decemlocularis: angulis compressis, subcrispis apice basique impressa; loculis longitudinaliter dehiscentibus, intus nitidis, colore margaritarum, glabris; membrana ante maturitatem pubescens.

SEM. tria singulo loculo, ovata, parva, rugosa.

Color Corollae albus.

INDIGOFERAE? alia species, foliis pinnatis, floribus spicatis caule debili.

94

*Radix* annua vel forte perennis.

*Caulis* pedalis ad duas usque orgyas, debilis, inter frutices sustentatus, quadrangularis, leviter compressus, secundum folia levissime flexuosus: ramis alternis, consimilibus.

*Folia* alterna, pinnata, sesquiuncialia: foliolis duorum parium cum impari, ovato-ellipticis, semuncialibus, obtusis acumine brevissimo, glabris, pilis tenuissimis ramusculis adpressis. *Petiolus* communis, uncialis, inferne teretiusculus; partialis . . . *Stipulae* subulatae, molles, parvae.

*Flores* in spica longa axillari, ex superioribus axillis parum pedunculati. *Pedunculus* communis spithamalis, basi patulus, ascendens.

*Flores*

§34. PLANTAE AMERICANAÆ.

*Flores*, albi, solitarii, leviter pedicellati: *Pedicellis* capillaribus, nutantibus, dimidiae lineae longitudine.

242

*CAL.* *Perianthium* tubulatum, laxum, ad medium quinquefidum: *laciniis* acutis; sinubus acutis, superioribus duobus majori sinu divaricatis, omnibus aequalibus.

*COR.* papilionacea: *Vexillum* et *Carina* ex opposito divaricata. *Vexillum* valde reflexum, ovatum, obtusum, integrum. *Alae* oblongae cum *Carina* flexa obtusa. *Carina* connexa, aperta, recta, apice rotundata, omnino reflexa a staminibus.

*STAM.* decem, unum superius, novem connata in vaginam recta, apice brevissime divisa, levissime adscendentia. *Antherae* suboblongae.

*PIST.* *Germen* lineare. *Stylus* brevis, rectus, staminibus paulo longior, subulatus, apice leviter adjunctus. *Stigma* crassiusculum, obtusum, subcapitatum breve.

*PER.* *Legumina* reflexa, nutantia, teretiufcula, filiformia, stricta, interne levissime subarcuata, obsolete quadrangularia, subcompressa, bivalvia, unilocularia.

*SEM.* octo, oblonga, ubique obtuse truncata, subquadrangularia.

Color *Corollae* fusco-purpureus.

95. MUCOR perennis niger in foliis siccis albis..

97. SIDA

96. SIDA caule erecto simplice superne folioso, spicis axillaribus terminalibusque longissimis nudis.

*Radix* fibrosa, perennis vel annua forte.

*Caulis* simplex, erectus, bi-vel tripedalis, basi lignosior, indivisus.

*Folia* alterna, ad superiora caulis, cordato-orbiculata, acuminata, margine inaequaliter crenulato; superne glabriuscula, inferne incana, sesquiuncialia; latitudine saepe duarum unciarum.

*Flores* in spicis longissimis bi-vel triuncialibus erectis strictis digesti in *glomerulis* oblongis, erectis, cauli adpressis; leviter pedicellati, plures erecti; *Bractea* subjecta glomerulis lanceolata, brevis, erecta.

*CAL.* *Perianthium* monophyllum, tubulatum, campanulatum, teretiuseulum, absque angulis, dimidiae lineae longitudine, ad medium quinquedentatum: *dentibus* ovatis, acutis.

*COR.* *Petala* quinque, calyce duplo majora, 243  
linearum duarum diametro, subrotunda, obtusa.

*STAM.* 6-8, parva basi connata, apice divisa, patentia. *Antherae* subrotundae.

*PIST.* *Germen* subrotundum, obtusum. *Stylus* vnus, quadrifidus. *Stigmata* capitata.

PIR.

PER. *Capsula* tribus vel quatuor angulis, vel quadrilobata.

SEM. solitaria.

Corolla lutea, parva. Fructus multi abortiunt: an Napæa? *potius Melochia.*

97. CLITORIA.

98. ERICA (*forte Eruca legendum.*)

99. HEMIONITIS fol. palmatis.

100. GRAMEN floribus axillaribus, foliis ovatis.

*Radices* plures fibrosæ, perennes.

*Culmi* aggregati, plures, patulo-dispersi, subprocumbentes, stricti, palmares, tenuës, simplices, septem vel octo ex geniculis.

*Folia* alterna, precipue versus supremum culmorum distiche patula, ovato-acuta (basi lata obtusissima) sessilia, sesquiuncialia, basi semuncialia, lata, margine retrorsum asperiuscula, nervosa, striatula. *Vagina* foliorum circiter longitudine, filiformis, dorso carinata marginibus alternis obvolutis, *membranula* vix vlla: *Petiolus* longitudine dimidiæ lineæ, planiusculus, linearis, superne leviter pubescens.

*Flores* axillares, duobus l. tribus pedicellis propriis vaginae longitudine inserti. *Pedicelli* capillares, singuli vagina propria membranacea sui ipsius longitudine involuti bi-

flori

PLANTAE AMERICANAE. 337

flori. *Flosculo inferiore* Masculo subseffili;  
*superiore* pedicellato Femineo.

CAL. masc. *gluma* bivalvis: valvulis linearibus lanceolatis, convexis, membranaceis, altera interiore angustiore, duarum linearum longitudine; patentibus, persistentibus.

STAM. *Filamenta* tria, glumis paulo breviora, capillaria.

*Antherae* lineares.

CAL. Femin. *Gluma* bivalvis, foliis lanceolato-acutis; convexis, basi striato-rugosis, erectis, apice subulatis; exteriore trium circ. linearum longitudine.

COR. *Gluma* bivalvis, spatioso a calyce remota: *valvula exterior* magna, calycis dimidii longitudine, obtusissima, compressa, dorso versus apicem maxime gibbo, marginibus erectis conniventibus; *interior* linearis, subulato-convoluta, intra rimam exterioris recondita.

244

PIST. *Germen* lineare, acutum. *Stylus* capillaris, simplex usque ad longitudinem glumae interioris, reliqua dimidia parte bifidus, extra corollam prominulus; patulus, filiformis. *Stigmata* undique longitudinaliter pilosa, plumosa.

PER. nullum. Corolla inflata, paulo compressa, nitida.

SEM. oblongo-subulatum, acutum, parvum, angustum, nec dimittit.

Color seminis capsulati albescens. Planta viridis colore arundinaceo. An *Apluda Zeugites*?

101. ADIANTUM frondibus bipinnatis: pinnis alternis; foliolis rhomboidalibus acutis ferratis. (*Hisp. Culantrello major*) *absque fructificatione.*

102. JUSTICIA *putata* spicis terminalibus pluribus; flore rubro.

*Caulis* frutescens, a  $\frac{1}{2}$ -2. orgyiarum altitudine, simplex, inferne nudus, superius foliosus, rectus, teres, cortice tenaci.

*Folia* opposita, oblonga, quinquencialia, utrinque acuta, patentia, basi attenuata in petiolum brevem, supra glabra, infra pubescentia, margine obsolete denticulata, plana.

*Spicae* 4-8, terminales, teretes, confertae, erectae, digitales usque palmares, imbricatae.

*Bractae exteriores* oppositae, sub singulo flore singulae, oblongo-acuminatae, margine a medio sursum utrinque duobus quatuorve denticulis, erectis, subulatis, notatae, erectae unciarum dimidiae longitudine, apice levissime erecto, patulo. *Bractae interiores* laterales,

les, lanceolato-lineares, acutae, convexae, calyci adpressae ejusque longitudine, glabrae, membranaceae.

CAL. *Perianthium* pentaphyllum, ad basin perfecte divisum: *foliolis* tribus exterioribus lanceolato-acutis, apice setaceis, membranaceis, glabris, horum dorsale vel bracteae dorsali proximum paulo latius majusque, interiora duo similia, sed paulo breviora, lateralia omnia apice setaceo, erecta, corollae adpressa.

COR. Tubus cylindricus, bracteae longitudine, tripartitus. *Labium infer.* ovato acutum, convexum, levissime pubescens. *Lab. sup.* paulo brevius, acutum, convexum (*obs. Florem h. t. non explicatum esse.*)

STAM. *Filamenta* quatuor, basi tubi adnata, subulata, tubo longiora, adscendentia: horum duo minora. *Antherae* oblongae, apice cohaerentes; superiores latere interiore cohaerent.

PIST. *Germen* oblongum. *Stylus* setaceus. *Stigma* simplicissimum, acutum.

*Anne ergo Barleria? Flos coccineus est.*

103. STAEHELINOIDES foliis ovato-oblongis; pedunculis filiformibus, longis, strictis. 176. 201.

*Radix* annua, fibrosa.

*Caulis* erectus,  $\frac{1}{2}$ - $1\frac{1}{2}$  pedalis, teretiusculus, glaber,

glaber, intus subinanis, leviter compressus:  
Ramis paucis, oppositis, erectis, caulis  
longitudine.

*Folia* opposita, ovata-oblonga, subintegerrima, glabra, setquiuncialia usque ad bi-vel triuncialia, basi in petiolum brevem deficientia.

*Flores* longe pedunculati, erecti; axillares. Pedunculus filiformis, axillaris inter ramum novum et caulem, interdum bini ex ala, uno intra alterum, exteriore longitudine duar. vel trium unciar. recti.

CAL. ex serie extrema palearum constat foliolis paucis, oblongis, planiusculis, corollula brevioribus: paleis omnibus in formam ovatam:

COR. universalis composita in formam ovatam, *flosculis* omnibus hermaphroditis, *Corollula* tubulata, palearum longitudine, ore patente.

STAM. *Anthera* cylindrica, corollula brevior.

PIST. *Gerimen* sub corollula, *Stylus* corolla brevior.

PER. - - -

SEM. oblonga, pauca, angulata, subquadrata, leviter antrorsum compressa.

*Paleae* lineares, erectae. *Corollulae* viridi-luteae.

104. GRISLEA *secunda*.

*Caulis*

PLANTAE AMERICANAЕ. 341

*Caulis* frutescens, erectus. 2. 3. Orgyar. alti-  
tudine: ramis paucis, rectis, superne Ra-  
mis sparsis, parallelis, longis, patentibus,  
subnatis, indivisis, vel lateralibus  
longis: trium vel sex pedum, indivisis, ul-  
mineis, inferius nudis, reliqua foliolis, su-  
perius compressis, inferius teretibus ad sin-  
gula folia latioribus, compressis, trifidatis,  
glabris, tortis.

*Folia* lanceolata, oblonga, in eodem plano di-  
sticho posita, patentissima, glabra, venosa,  
acuta, bi-triuncialia. *Petoli* breves,  $\frac{2}{3}$  unc.  
longitudine, infra teretiusculi, supra sulco  
exarati, saepe curvi.

*Flores* ex latere superiore, utrinque ad axillas,  
omnes secundi sursum flexi, in corymbos  
consertos oppositos dispositi. *Corymbus*  
compressus, cymosus, pedicellis  $\frac{1}{2}$ -1 (unciae  
forte) longit. sursum crassioribus, colorati,  
bracteati, lineares, breves.

*CAL.* *Perianthium* monophyllum, tubulatum,  
laxum, superne leviter latius, teretiuscu-  
lum, obsolete levissime sursum quadrangu-  
lare, superne quadridentatum: *dentibus* a-  
cutis, coloratum, persistens.

*COR.* *Petala* quatuor, inserta margini interio-  
ri calycis ad incisuras, sic oblonga, utrinque  
acuta, erecta, leviter concava, basi fere  
ungue lineari inserta.

342 PLANTAE AMERICANAE.

STAM. *Filamenta* octo, setacea, duplae longitudinis calycis, ad unum latus paulo curva s. adscendentia, calyci ad basin inserta. *Antherae* subrotundae, parvae, ante dehiscentiam didymae.

PIST. *Germen* globosum, basi levissime pedicellatum: pedicello tereti, crassiusculo. *Stylus* filiformis. *Stigma* simplex.

PER. *Capsula* globosa, calyce paulo brevior, unilocularis.

SEM. plurima, subrotunda, ad superficiem receptaculo magno inserta.

Haud raro invenitur in eodem corymbo  
*Calyx* quinque-dentatus, *Corolla* pentapetala et *Stamina* decem. *Color* calycis fusco-sanguineus, corollae staminumque eleganter coccineus. *An* *Glaucis affinis?*

*Radix* descendens digiti crassitie fibris longis radicata.

*Caulis* simplex pedalis, vel ramosus: ramis adscendentibus, hirsuto lanatis.

*Folia* alterna, sparsa, pinnatifida, spithamalia: lobis oppositis oblongis obtusis obtuse denticulata, nervo medio plano sinibus latis remotis.

247 XX. 105. PASSIFLORA *minima* foliis trilobis integerrimis: lobis sublanceolatis, intermedio productiore. *Spec.* 459: 20.

*Radix*

*Radix* annua.

*Caulis* herbaceus, cirrhis alte scandens, filiformis, planocompressus, glaber, superius pubescens, Ramis raris, axillaribus, confimilibus cauli.

*Folia* alterna, triloba, uncialia l. biuncialia et supra, lobis lateralibus ovatis, patentibus, intermedio duplo longiore, oblongo; margine integerrimo, glabra levissime pubescentia. *Petioli* teretiusculi, supra sulco exarati. *Glandulae* duae in medio petioli, juxta marginem sulci, pedicellatae, turbinatae, glabrae, disco concavo, depresso. *Cirrhus* axillaris, longus, spiralis, filiformis, simplex. *Stipulae* erectae, lineari-acutae.

*Flores* axillares, duo, lateraliter supra cirrhum juxta stipulas. *Pedunculi* filiformes, simplices, unciales. *Involucrum* nullum.

**CAL.** *Perianthium* monophyllum, planiusculum, ad duas tertias partes quinquepartitum: *laciniis* lanceolato-linearibus, foras convexis.

**COR.** nulla.

*Nectarium* circulare triplex, calyci innatum <sup>a</sup>) *exterius* radiatum patens: laciniis filiformibus, obtusis, simplicibus, viginti sex circ. <sup>b</sup>) *Interiorius* multiplex, multifidum: laciniis filiformibus, brevissimis. <sup>c</sup>) *Intimum* monophyllum, integrum,

tegrum, marginis instar erectum, lineae quartae circ. partis altitudine, pertotum arcu plicatum, plicis ultra triginta.

STAM. *Filamenta* quinque, apice inserta columnae, filiformia, calycis dimidiae longitudine, lineari-plana, post florescentiam reflexa ante apertionem fere florum pollen dimittitur. *Antherae* lineares, utrinque obtusae, planae, incumbentes; *Pollen* minimum, globoso-oblongum, glabriusculum.

PIST. *Germen* globosum, apice columnae in sinu staminum impositum. *Styli* tres, erecto-patuli, sursum paulo crassiores. *Stigmata* obtusa.

PER. *Bacca* pedicellata, globosa, obtusa, superne tribus lineis obsolete striata, glabra, unilocularis.

248 SEM. plura, 20-30, ovato-oblonga, rugosa, antea succulenta, affixa superficiei interiori baccae ad parietes.

*Color* Calycis foras viridis, intus una cum contentis luteo-viridis; unicolor. *Bacca* nigrescens.

106. GAURA *fruticosa* (COMBRETUM *la-*

*num* p. 308.) subscandens foliis oppositis.

*Caulis* frutescens, teres; ramis superis longis, obsolete quadratis sterilibus, subscandentibus.

*Folia* opposita, oblonga, tri-vel quadriuncialia, breve

- . . . . . breve petiolata, glabra, integerrima.  
 . . . . . Flores spicati in ramulis oppositis, subsessiles.  
 . . . . . CAL. terminalis, germine sursum angustato f.  
 . . . . . elongato; monophyllus, campanulato-ere-  
 . . . . . ctus, laxiusculus, quadridentatus: *denticulis*  
 . . . . . brevibus, lato-acutis.  
 . . . . . COR. Petala quatuor, parva, ex incisuris caly-  
 . . . . . cis, ovato-acuta, vix dentibus longiora, ru-  
 . . . . . dia, decidua.  
 . . . . . STAM. *Filamenta* octo, longissima, setacea ca-  
 . . . . . lyce sexies longiora. *Antherae* suboblongae,  
 . . . . . parvae.  
 . . . . . PIST. *Germen* sub receptaculo, lineare, qua-  
 . . . . . drangulare angulis compressis superne acu-  
 . . . . . minatum. *Stylus* longitudine staminum, fe-  
 . . . . . raceus, ad basin calycis auctus pubescenti  
 . . . . . lanugine. *Stigma* simplex acutum.  
 . . . . . PER. nullum, nisi crusta seminis tetragona.  
 . . . . . SEM. unicum, oblongum, tetragonum, quatuor  
 . . . . . alis longitudinalibus membranaceis: nucleo  
 . . . . . intus convoluto, tetragono, angulis com-  
 . . . . . pressis.  
 . . . . . 107. ARBOR mediocris alia foliis lanceolatis;  
 . . . . . pedunculis pendulis. An *Cleome*?  
 . . . . . Radix arborea.  
 . . . . . Caulis arboris mediocris vel fruticis altioris,  
 . . . . . superne ramis filiformibus, undique disper-  
 . . . . . sis, vimineis: ramulis sparsis.  
 . . . . . Folia in summis ramulis sparsa, alterna, pen-  
 . . . . . dula

dula, lanceolata, stricta, ficcata, mucronata, leviter connato-complicata, glaberrima, venosa, integerrima, tri-vel quadriuncialia. *Petioles* filiformes, teretes, patentissimi, apice crassiores, unciales vel biunciales.

*Flores* in racemis simplicibus, digitalibus et brevioribus, sparsis, pedunculatis, simplicibus.

249 CAL. *Perianthium* monophyllum, tubulatum, semiunciale, integrum apice violenter rumpitur in tres dentes; inferius magis dehiscens coloratum, deciduum.

COR. *Petala* quatuor, erecta, linearia, convexa, calyce leviter majora, obtuse acuminata.

*Nectarii* squamae quatuor extra corollam, eidem adpressae, erectae, intra calycem, subquadrangulares, truncatae, ad interstitia petalorum sitae.

STAM. *Filamenta* sex, longissima, subulata, erecto-decumbentia. *Antherae* oblongae, planae; postea recurvae.

PIST. subulatum, parvum. *Stylus* filiformis. *Stigma* globosum, capitatum.

108. BANNISTERIA foliis integerrimis subtus sericeo-nitidis, seminibus extrorsum tenuibus basi variis prominentiis, ramis brachiatis.

*Frutex* subscandens Ramis brachiatis oppositis patentibus.

*Folia*

PLANTAE AMERICANAE. 347

*Folia* ovata vel subrotundo-oblonga, biuncialia, integerrima, obtusa, glabra, tenuissima sericea, nitida, cinerea. *Petoli* longitudine tertiae partis unciae, teretiusculi, supra linea excavati.

*Flores* versus summos ramos in ramulis brachiatis oppositis, divisus in ramulos minores racemosos similiter pedunculis brachiatis digesti; subdivisis. *Pedunculi* uniflori, teretes, semiunciales.

CAL. *Perianthium* pentaphyllum vel monophyllum, planum, quinquepartitum: laciniis ovato-lanceolatis, 2-4 glandulis: duabus oblongis.

COR. decidua.

STAM. . . . .

PIST. . . . .

PER. Capsulae tres, longitudinales, basi subrotunda dorso latius acuto, prominente; lateribus itidem utrinque duobus, sursum acutis, ala latere interiore rectiore, paulo introrsum curvo, leviter crassiore; exteriori longitudinali convexo, tenuiore, sursum latiore, obtuso, margine repando, striato. Non dehiscit.

SEM. unicum, oblongum, apice extrorsum vergens.

QUAESTIO *Botanica*. An stylus auram femi-  
nalem

nalem communicat embryoni feminis, via directa ad semen descendendo, vel an Stylus per conductum corticalem Germinis, auram illam foecundativam derivat ad basin s. receptaculum Germinis, ut exinde promanet una cum succo nutritivo plantae sursum ex basi Floris ad Germen, simulque ad embryones seminum? *Resp.* posterius adfirmat Bannisteria ex propria figura et structura, ubi stylus lateraliter capsulae versus basin feminis inseritur, cujusque semen corculum gerit. Ex aliis forte idem videtur, ut in Nucibus, Amygdalis, ex cujus putaminis superficie interiore, ab altero latere, descendit quasi fibra h. e. vas, deferens auram feminalem, sursum revera ipsi putaminis substantiae inserta excurrit in stylum.

*An* ergo verisimile est, basin floris continere receptaculum ejusmodi, pro excipienda hac geniturae aura, usque sursum vergat? ita credere fas est. Succum sursum ferri, nemini non notum est; sed deorsum quoque patet ex nectaris florum, quae singulo mane guttas stillant, postea non, neque hoc exhalationi soli adscribendum puto.

*An* quoque flores, stylum gerentes unum, sed pluribus praeditum stigmatibus, quae plerumque singulis loculamentis respondent, exemto

exento aliquo stigmatate ante foecundationem, locus eidem proprius sterilefcit? Experientia inquiri debet.

109. DEREDAMO planta scandens, foliis oppositis geminis; radiculis trifidis oppositis axillaribus.

Est Planta herbacea, arctissime truncis arborum adhaerens, radiculis trifidis; inter ramos corticis adhaerens. *Folia* opposita, geminata; *Foliolis* uncialibus, lanceolatis, integerrimis, glabris. *Pedunculi* communes oppositi,  $\frac{1}{3}$  unciae longitud. apice divisi in ramulos duos brevissimos. *Cirrhii* axillares (quos antea dixi radículas,) breves, 4-2 lin. longitudine; medietate superiore tripartiti: laciniis teretiufculis, subulatis, incurvis, rigidis, acutis. *Flores* non vidi.

110. BANNISTERIA hodie supra descripta, differt ab altera Cumanensi (conf. Descr.) foliis minoribus, glaberrimis, ubique viridibus, non nitidis sed magis fere aequalibus; caule minore et magis volubili, ut et floribus in racemos minores digestis, nec ramulis aequalibus adeo brachiata; praeterea capsulis singulis s. seminibus basi aliis prominentiis nullis, ipsa basi oblique truncata.

XX. Februarii.

251

111. JUSTICIA herbacea, capitulis imbricatis, floribus quadrifidis longe divisis.

*Radix*

*Radix* lignosa, hinc inde sparsa, fibris filiformibus durioribus.

*Caulis* suffrutescens, lignosus, duor. vel trium pedum altitudine, erectus, tenuis; ramis oppositis, brachiatis, sed saepe deficiunt ab uno alterove latere; tener, glaber.

*Folia* inferiora decidua; superiora pauca, virentia, ovato-oblonga, acuta, mox sensim mucronata, uncialia, tenera, pubescentia, integerrima. *Petioli* oppositi, vix semiunciales, magis pilosi, superne lineola concavati.

*Flores* in spicis terminalibus sessilibus, laxe imbricatis. *Braeteis* ovatis et subrotundo-ovatis, planiusculis, apice leviter patulis, acuminatis, trinerviis, margine pubescenti-ciliatis, cum pilis foras, sed tenerrimis ramusculis.

*CAL.* *Perianthium* monophyllum, breve, ad basin fere unam quartam partem partitum: laciniis sursum setaceis, angustissimis.

*COR.* monopetala, tubulata, inaequalis. *Tubus* longus filiformis, angustus, calyce duplo triplove longior, sursum leviter arcuatus, tener. *Limbus* erecto-patens, tubi longitudine, ad basin quadripartitus: *lacinia* superiore lanceolata, acuta, concava, paulullum adscendente.

*SEM.* *Filamenta* duo, capillaria, ad medium limbi attingentia, labio superiori parallela

et

et contigua. *Antherae* oblongae, simplices.

PIST. *Germen* lineari-oblongum. *Stylus* - - -

*Stigma* simplex, birenatum, paulo compressum.

PER. *Capsula* parva, oblonga, compressa, sursum latior, apice obtuse acuminata, bivalvis, dissepimenti margine denticulos elasticos gerente.

SEM. duo, subrotunda, compressa, punctis elevatis scabra. *Color* Corollae albus, lab. superius ad basin levi purpura tinctum.

112. JUSTICIA corolla longius tubulata.

CAL. *Perianthium* tetraphyllum vel ad basin quadripartitum, foliolis teretibus, erectis, filiformibus, persistentibus.

COR. tubulata: *Tubus* longissimus, filiformis, juxta limbum levissime latior. *Limbus* bilabiatus. *Lab. sup.* breve, lineari-lanceolatum, obtusiusculum, sursum angustatum.

*Lab. inf.* trifidum, latius, longius, dependens, longitudine duarum linearum: *lacinis* oblongis, obtusiusculis, intermedia latiore, obtusa; omnibus supra convexis, dependentibus.

STAM. *Filamenta* duo, capillaria, longitudine medii lab. superioris, apice subplaniuscula.

*Antherae* oblongae.

PIST. *Germen* oblongum, lineare, compressum.

fum. *Stylus* filiformis, longitudine staminum.

PER. *Capsula* oblonga, teretiuscula, paulo compressa, obtuse acuminata: *bas*i angustiore, pedicellata, compressa.

113. EPIDENDRUM acaule, foliis acutis hinc carinatis, inde introrsum obtusis canaliculatis. Folium media basi dissectum, tuber compressum subrotundum apparet.

XII. On the road to *Barcellona*.

114. PALMA *spinosa*, frondibus; pinnatis, foliis linearibus basi replicatis, stipite tomentoso, spicis reflexis dorsalibus, trunco spinoso.

*Caulis* humanae altitudinis, pollice humano paulo crassior, simplex, rectus *vaginis* arctis, tomentosis, spinosis *spinis* setaceis, rigidis, acutissimis, pungentibus.

*Frondes* ex apice caulis pinnatae: pinnis alternis, linearibus, spithamalibus, planis, basi replicatis, ungue pollicis paulo latioribus, ultimis duabus latioribus.

*Stipes* frondis convexus infra, supra in carinam trianguli compressus, tomentosus: spinæ sparsæ dorsales juxta marginem, uncialiales et biunciales, primum erectæ, stipiti adpressæ, demum patulæ, postea reflexæ, stipiti impressa foveola subulata pro spinis illi impressis.

*Stipes*

*Stipes* 2, 3; 4-pedalis.

*Flores* spatha continentur ovata, tandem sursum dehiscente; postea persistens flores fornicatim (uti fornax) obtegens, convexa, 5, 6, uncialis.

*Spadix* ramosus. Reliquos flores non vidi.

Lignum nigrum est, sed versus medium album; pars nigra durissima est.

115. PALMA major, trunco crasso crassitie corporis humani, spinosa: spinis erectis subulatis rigidissimis; *Frondeb* pinnatis longis, stipite dorso quoque spinoso. *Corosa* vulgo.

253

CAL. *Spathae* magnae, lanceolatae, foris vellere crasso hirsutae, firmae.

PER. *Fructus* sunt globosi, pomorum figura et magnitudine; glabri, sed pilis rigidis, deciduis hispidi, quibus derasis glaberrimi.

*Cortex* exterior spatiolo a pulpa remotus, ficcus. *Pulpa* tenax, fibrillis e centro oriundis, humida, succo glutinosa.

*Nux* globosa, dura, putamine osseo nigriusculo:

Nucleus globosus, gustu Cocorum, solidus.

116. CASSIAE affinis foliis pinnatis, bijugis, floribus solitariis, staminibus omnibus aequalibus.

*Radix* perennis.

*Caulis* aliquot decumbentes, usque tripedales, extremitate adscendentes, filiformes, teretes,

354 PLANTAE AMERICANAER.

tes, sursum praesertim pubescentes vel pilosi, pilis patentibus, apice gluten secernentibus.

*Rami* pauci, alterni, confimiles.

*Folia* alterna, ad superiora caulis pinnata: pinnis duor. parium, subrotundis et elliptico-subrotundis; glaberrimis, integerrimis, planis.

*Petiolus communis* filiformis, pilosus uti caulis, sesquiuncialis et basi crassiusculus; *partiales* vix ulli, s. brevissimi, crassiusculi.

*Stipulae* breves, acutae, lineares, patulae.

*Flores* solitarii, axillares, alterni, terminales; *pedunculi* simplices, teretes, patentés, femiunciales.

CAL. *Perianthium* pentaphyllum, reflexum: foliolis linearibus, acutis, membranaceis, longitudine trium linearum deciduis.

COR. *Petala* quinque, erecto-patula, paulo inaequalia, obovata, calyce duplo longiora vel femiuncialia, unguiculata unguiculis teretibus.

STAM. *Filamenta* decem, brevissima, linearia. *Antherae* lineares, teretes, curvae calyce paulo breviores, apice conniventes, duobus foraminibus perforatae; omnes aequales fertileque.

PIST. *Germen* lineare, curvum, longum. *Stylus* subulatus. *Color* Corollae luteus.

254 117. CLITORIA minor, flore caeruleo. *Caulis*

*Caulis* scandens, filiformis, tenuis, contra solem  
 s. sinistrorsum volubilis; glaberrimus; ra-  
 mis confimilibus.

*Folia* alterna: foliolis lanceolatis, acutis, ses-  
 quinualibus, glabris, integerrimis, venosis.

*Petiolus universalis* longitudine duar. uncia-  
 rum cum dimidia, basi crassus, alias teres,  
 linea profunda, angusta fulcatus; *partiales*  
 breves, teretes. *Stipulae* petioli duae, subu-  
 latae, breves, erectae ad folia lateralia,  
 quae paulo supra medium petioli communis  
 adnatae eidem adnexa sunt et *duo* ad apicem  
 petioli, ubi incipit pedicellus terminalis.

*Stipulae baseos* duae, ovato-acutae, breves,  
 erectae.

*Flores* 2, 3, 4, 5, axillares. *Pedunculi* conferti,  
 axillares, semiunciales, filiformes, hirsuti,  
 uniflori. *Bractaeae* plurium ordinum; *infi-*  
*mae* ad petioli basin duor. parium, acutae,  
 erectae; *postea* excipitur bracteis duabus  
 oppositis, patentibus, deciduis, ovato-acu-  
 minatis, concavis, excipientibus latere infe-  
 riore. *Floris* bracteam *aliam*, subrotundo-  
 cordatam, concavam, patentem, amplexan-  
 tem pedunculos, obtusam, acuminatam;  
 postea pedunculus nudus ad bracteas flora-  
 les. *Bractaeae florales* binae, laterales, oppo-  
 sitae, erectae, ovato-acuminatae, concavae s.  
 convexae, glabrae, marginibus parallelis,

conniventibus, florem ante explicationem includentibus.

CAL. *Perianthium* monophyllum, campanulatum, breve, quinquedentatum; dentibus obtusis, brevissimis; infimo vero longiore, subulato, sinibus obtusissimis; dorsalibus duobus approximatis.

COR. papilionacea. *Vexillum* patentissimum, maximum, subrotundum, planum ungue brevi; lamina dorsi inciso profundo notata. *Alae* lineares, lanceolatae, adscendentes, cum supremo margine carinae parallelae, unguis brevi, lineari, appendice oblongo, marginibus tumide flexis, lamina latere superiore tumida. *Carina* obtusa, valde adscendens, margine inferiori segmenti circuli instar adscendente; unguis basi levissime bifidus, apice quoque bifido, laciniis ovatis, marginibus tumidis, connatis.

STAM. diadelpha superius filiforme, depressum, distinctum; *reliqua* novem connata, superne fissa, laciniis subulatis, curvis. *Antherae* subrotundae, parvae, incumbentes.

255 PIST. *Germen* lineare, lateribus sulco impressis. *Stylus* filiformis, sursum crassior, mox in *Stigma* planum, oblongum, obtusum, glabrum desinens.

PER. *Legumen*, ut in altera specie, lineari-subu-

subulatum, digitale et ultra, lateribus sulco profundo notatum.

Differt ab alia specie caule tenuiore, foliis lanceolatis, bractearum copia et figura, floribus axillaribus nec spicatis, flore minore, intensius caeruleo, nec nigro; hinc inde carinae basi forte etc.

118. MELOCHIA flore albo. (*Melochia pyramidata?*)

*Caules* erecti, tri-vel quadripedales, ramosi, frutescentes; ramis aliquot erecto-patentibus, pubescentibus.

*Folia* parva, duar. vel trium linear. longitudine; ovalia, venoso-plicata, fusco-viridia, serrata pro plicaturis. concava. *Petiolus* teres, brevis hirsutus, lineae circ. longitudine. *Stipulae* duae, subulatae erectae.

*Flores* in umbella, 3-7, erecto-patuli: umbella opposita foliis, non axillaris, pedunculo communi brevi 1-2 linear. elevata; pedicellis linearibus vel bilinearibus, erecto-patulis, e puncto s. centro emergentibus. *Bractaeae* setaceae, singulis floribus binae, patulae.

*CAL. Perianthium* monophyllum, campanulatum, ultra medium quinquepartitum: laciniis lanceolato-acutis, apice subulatis, erectis, leviter laxum.

*COR.* monopetala, erecta: petalis basi connatis cum staminibus.

358 PLANTAE AMERICANAЕ.

STAM. *Filamenta* quinque, basi connata cum corolla, longitudine circ. calycis, subulata.

*Antherae* oblongae, incumbentes.

PIST. *Germen* oblongum, acutum. *Stylus* subulatus, superne quinquepartitus: laciniis capillaribus, patentibus. *Stigmata* oblonga.

PER. *Capsula* pentagona, angulis compressis; apice acuminata, quinquelocularis.

SEM. oblonga, inde acuta.

Haec corolla alba. Differt ab altera foliis minoribus, ovalibus, viridibus, nec tomentosis; Umbella foliis opposita, nec axillari; bracteola subpedicellata; Corolla minore, Capsula minore angulis sursum vergentibus nec inferiora versus, nec lateraliter etc.

256 119. TRIPLARIS *americana* arbor insignis.

*Calyce* magno, trifido.

*Cor.* nulla. Triandra, Trigyna. Fructum non vidi.

120. MELOCHIA tomentosa.

121. MALVA flore luteo minimo aggregato.

122. CONVULVULOIDES procumbens, foliis oblongis subtus sericeis; floribus axillaribus sessilibus majoribus. Styli quatuor.

123. CONVULVULOIDES erectus.

XII. 124. RUELLIA? Planta caule erecto spirithamali, floribus oppositis solitariis albis, foliis oppositis linearibus.

Radix

*Radix* annua,

*Caulis* erectus, 2-3. ramis erectis, simplex vel brachiatus, tenuis.

*Folia* linearia, angustissima, opposita, semiuncialia, pilosa. 246

*Flores* spicati, sessiles. *Bractae* laterales duae, subulatae, excepta antica foliacea.

*CAL.* tubulatus, quatuor linearum longitudine, striatus, quinqueidentatus.

*COR.* tubulata: *Tube* aequali; calycis longitudine: *Limbus* quinquepartitus: laciniis subaequalibus, superioribus leviter minoribus.

*Faux* clausa villis.

*STAM.* quatuor intra tubum, duo longiora. *Antherae* oblongo-lineares.

*PIST.* *Germen* oblongum. *Stylus* filiformis, staminibus brevior. *Stigma* obtusum, simplex.

*PER.* *Capsula* oblonga, teretiufcula, calyce paulo major, acuta, subquadrangularis, utrinque linea angusta; bilocularis.

*SEM.* plura, parva, oblonga.

125. *SIDA* foliis tomentoso-mollibus orbiculato-cordatis obtusis crenatis.

*Flores* pallide lutei.

*CAL.* tomentosus, quinquepartitus: laciniis ovatis bifurcatis.

*STAM.* plura.

*PER.* *Capsulae* decem, connatae in formam subrotundam; paulo depressae, tomentosae,

fae, singulae uniloculares, monospermae.

126. *BIGNONIA* foliolis lanceolatis; quae  
*Paricha* planta scandens, filiformis, foliis  
oppositis cum cirrho in medio.

127. *AYENIA fidaiformis* caule simplice, fo-  
liis ovato-oblongis duplicato-serratis subtus  
tomentosis. *Caulis* suffrutescens, teres, to-  
mentoso-pubescentis.

128. *Fruticulus* erectus bipedalis dichotomus  
lignosus.

*Folia* opposita, oblonga, utrinque acuta, basi  
fere magis contracta, subsessilia, biuncialia,  
integerrima, glabra, subtus pallida.

**REC.** paleis oblongis, concavis.

Corollulae color luteus.

152. **ARISTIDA** floribus paniculatis tenuissimis, aristis tribus, panicula laxa erecta.

*Gramen* tenuissimum, digitale, spithamale.

153. **HEDYSARUM** caule erecto simplice, foliis ternis, sessilibus, floribus spicatis axillaribus.

*Radix* perennis.

*Caules* erecti, simplices, bi-vel tripedales, recti, inferne teretiuseculi, superne subangulati hirsuti.

*Folia* alterna, sessilia, ternata: *Foliolis* oblongis sesquiuncialibus, supra pubescentibus, infra paulo pallidioribus, venoso-reticulatis, pedicellatis.

7-10 cellatis. *Stipulae* lanceolatae, erectae, trian-  
gulares, sesquilineae longitudine.

*Flores* axillares, spicati, racemosi: *racemis* ob-  
longis, erectis, semiuncialibus, simplicibus;  
*pedicellis* sesquilineae longitudine. *Bracteolae*  
ovatae, convexae, glabrae.

CAL. *Perianthium* monophyllum, tubulosum,  
quinquefidum: laciniis subulatis, corolla le-  
viter brevioribus, infima reliquis longiore.

COR. *Vexillum* oblongum, apice patulum, basi  
utrinque inflexum. *Alae* lineares. *Carina*  
linearis, apice latior, rotundata, inferius tota  
fere dehiscens, apice ascendente.

STAM. Diadelpa 1 et 9, simplicia. *Antherae*  
subrotundae.

PIST. *Germen* oblongo-tubulatum, hirsutum.

*Stylus* capillaris. *Stigma* crassiusculum, sim-  
plex.

PER. *Legumen* calycis longitudine, hirsutum,  
ovato-acutum, leviter compressum.

SEM. duo, oblonga, apice ultimo recurvo acu-  
to. (Flores lutei.)

154. IPOTARAGUAPIN. *Frutex* erectus,  
humanae altitudinis et ultra: *ramis* longis,  
erectis, oppositis, patentissimis, strictis; Cor-  
tice fusco glabriusculo. *Spinae* oppositae, in-  
terdum ternae, supra singulos ramos, paten-  
tes, subulatae, acutae, rectae.

*Folia* sub spinulis enascentia vel terminalia,  
fasci-

fasciculato-conferta, opposita, ovata-oblonga, uncialia, venis oppositis alternisque subtus prominulis, simplicibus, *petiolo* brevi lineari. *Stipulae* oppositae, interfoliaceae, ovato-acutae, planae.

*Flores* in *pedunculis* oppositis vel solitariis, axillaribus, 1-2 uncialibus, rectis, apice bifidis, floriferis: *flores* conferti ut videtur, licet hoc tempore illis destituta.

Fructum fert sub receptaculo ut videtur.

*Drupa* parva, oblonga, trium vel quatuor linearum longitudine.

*Nux* oblonga, obsoleto triangularis: angulo uno prominentiore, teretiufculo, utrinque sulco notato; bilocularis, loculis teretibus, uno in media nuce, altero in angulo teretiufculo, putamine ibidem tenuiore. *Nuclei* duo, teretes, albi. 271

155. EDECHI, 133. LAUGIERIA *odorata*.

*Caulis* frutescens, erectus, bis humanae altitudinis, priori similis, sed absque spinis.

*Folia* terminalia, conferta, copiosa, opposita, oblonga, acuta; *Petioli* breves. *Stipulae* interfoliaceae, ovatae, acutae, planae.

*Flores* dichotomi, conferti, ex apice pedunculorum. *Bractee* sub singulo flore, lanceolato-acutae, patulae.

CAL. *Perianthium* monophyllum, tubulatum, teres, ore integro vel vix manifeste denticulato,

cellato, vix lineae dimidiae longitudine, persistens supra fructum.

COR. monopetala, tubulata: *Tubo* longo, calyce sexies longiore, superne levissime latiore;  $\frac{1}{2}$  pollicis unguis longitudine. *Limbus* patens, quinquepartitus: laciniis oblongis, marginibus lateralibus reflexis.

STAM. *Filamenta* quinque, brevissima, supra medium tubi adnata, capillaria. *Antherae* lineares, tubi circ. altitudine:

PIST. *Germen* subrotundum, receptaculo cinctum. *Stylus* filiformis, staminibus altior. *Stigma* capitatum, subrotundum.

PER. *Drupa* parva, subglobosa. *Nux* quadri-vel quinque-ocularis.

*Color* Corollae albo-purpureus, *Tubo* externe rudi. Congener videtur praecedenti.

156 HIBISCUS foliis oblongis; flore solitario.

XVII. Near the river *Aragua*.

157. PALO DE COCHINELLE; a shrub, which had opposite lanceolated leaves, whose stem was hollow, so that it might be employed for a tube to a tobaccopipe.

158. CROTON hispidum, caule trifido; Folia incisa, tota planta hispida, annua.

159. CUCUMIS *rustica* smelled nearly as Caraway-seeds.

160. SMILAX scandens, foliis oblongis, caule teretiufculo spinoso; Folia pallide viridia.

PLANTAE AMERICANAE 385

161. WALTHERIA *Melochioides* flore luteo aggregato pentandro monogyno.

162. DIOSCOREA scandens, foliis cordatis alternis, caule levi, calyce cyathiformi sexdentato.

*Folia* cordata acuminata, integerrima.

PER. *Capsula* oblonga, trigona: angulis compressis.

SEM. alata, in singulo loculo dua

163. MASTRANZO floribus verticillato-capitatis sessilibus parvis albis.

*Folia* rugosa.

CAL. patentiores, strigosiores, tubulati.

164. PHASEOLUS parvus, erectus herbaceus. *Caulis* tener, filiformis.

*Folia* ternata, linearia. *Folres* spicati, terminales, eleganter coccineo-rosei: *Alae* maximae, rectae. *Carina* inflexa.

XXV. 165. BIGNONIA arborea scandens, foliis pinnatis glabris, siliquis longissimis planis linearibus.

Semina sursum imbricata sunt simplici serie.

166. SIDA flore albo erecto longo. *Folia* cordata. *Rami* erecti.

167. CECROPIA. *Peltata*. Coilotapalus.

*Brown. jam* iii. Yagramo vulgo the leaves of this plant are the common food of the sloth (*Bradypus*. Linn.)

*Folia* pauca, alterna ad summitates ramorum.  
*Stipulae* interfoliaceae ut in Ficu, latere folio adverso f. opposito dehiscentes, marginibus obvolutis f. imbricatis, mox caducae.

*Floris* Masc. et Femin. in distinctis arboribus.

\* MASC. pedunculis geminis ex axillis foliorum; sed intra ipsam stipulam h. e. *Stipula* interposita inter axilliam fol. *Pedunculis* teretibus, spithamalibus, subpendulis, singulis spatham apice gerentibus.

273 CAL. *Spatha* ovato-acuta, integra, rumpens, caduca, includens *Amenta* plurima, fasciculata, teretia, pendula parallela, pedicellata, altissime imbricata, squamis vel *Receptaculis* staminum copiosissimis, turbinatis, compresso-tetragonis, obtusis, supra linea elevatiore notatis, tandem duplici foramine dehiscentibus.

COR. nulla, nisi Calycis squamas dicas esse, vel Nectarii squamas.

STAM. *Filamenta* duo, capillaria, brevissima, singula ex singulis foraminibus squamarum calycinarum. *Antherae* oblongae, tetragonae, parvae.

\* FEMIN. penduli, forte solitarii ex axillis ut Masculi; sed si solitarii, an geminis pedunculis pendeant, nescio. *Pedunculi* digitales et ultra.

CAL. *Spatha* forte ut in Masc. nam h. t. cecidit,

dit, includens *Amenta* quatuor, patula, nuntantia, teretia, masculis crassiora, digiti minimi manuum instar, arctissime imbricata germinibus nudis.

COR. nulla.

PIST. *Germina* plurima, imbricata, compresso-quadrata, obtusa, tomento tenuissimo obvoluta. *Styli* solitarii, brevissimi: *Stigmata* obtusa, lacera, subcapitata.

PER. *Capsula* Germinis forma et figura unilocularis, vix dehiscens, separato cortice a femine tamen distincta.

SEM. solitaria, oblonga, compressa, parva.

Lyncæis oculis alii lustrent ulterius partes fructificationis, certae minimae sunt et tenuissimae.

*Color Femin.* incanus a tomento *Masc.* luteus; sicci evadunt atrii; novi proprii et singularis sunt generis.

XXVII. 168. SANGUIS DRACONIS 147.

I find that our *Sanguis Draconis occidentalis* is the same with the *orientalis*, but of a species different from this plant; whose character is the following,

CAL. *Perianthium* monophyllum, tubulatum, basi obtusum; quinquedentatum.

COR. papilionacea, calyce duplo longior. *Vexillum* ungui oblongo; lamina subrotunda. *Alae* lanceolatae, vexillo breviores.

STAM. *Filamenta* decem, connata, adscendentia.  
*Antherae*. - - -

PIST. *Germen* oblongum, compressum, pedicel-  
 latum. *Stylus* subulatus.

PER. *Legumen* subrotundo-oblongum, planum,  
 membranaceum, uniloculare, intus ligno-  
 sum.

XXVIII. From the river *Aragua*, the people  
 sent a kind of *Sarsaparilla* or *Smilax*, which  
 I had not seen before used in Physic: it  
 differed from that species, which is officinal  
 in both the Indies.

169. SMILAX.

*Radices* plurimae, filiformes, longae, durius-  
 culae, foras teretes, glaberrimae absque fi-  
 brillis sparsis, verum eorum loco *Spinulis*  
 parvis, brevibus, glabris, subpungentibus,  
 cortice tenui. Ab altera *specie* *Officinali* differt  
 figura radice filiformi, angulata, cortice  
 crassiore, duro, angulato, rugoso, fibrillis la-  
 teralibus plurimis.

*Caulis* scandens, fusiformis, teres, glaberrimus,  
 aculeatus: *aculeis* subulatis, pungentibus,  
 validis, trium quatuorve linearum longitu-  
 dine, inaequaliter sparsis, ad genicula folio-  
 rum pluribus: *ramis* superioribus substriatis.  
 Caulis inferne subgeniculatus.

*Folia* alterna, lanceolata, vel oblongo-lanceo-  
 lata, trinervia, vel cum ultimis minoribus  
 quin-

quinquenervia, dura, firmia, erectiuscula, 3, 4, 5-uncialia, versus apicem contorta, petiolata, nervo medio subaculeato: aculeis 1, 2, 3, parvis; interdum inermia. *Petiolus* patens, brevis, semiuncialis, basi crassissimus, h. e. e tuberculo sensim prodiens, latus, margine membranaceo, semiamplexicauli, membrana firma tamen; subtus convexus, angulo carinatus parvo, subinermi vel serratulo, vel glabro vel spinula una alteraque notatus apice sursum curvus.

## I. MARTII.

170. MUSA had fruit, but some blossoms were still on it. I found 5 stamina with a rudiment of a 6th in the nectarium of the male flowers, and the same in the hermaphrodite flowers. I could observe no difference, except that those in the male flowers were narrower.

II. To-day I caught in a hollow tree a *Robi-pelado* or *Mapeha* as the Indians call it. It is Dr. *Linnaeus's* DIDELPHIS, so remarkable on account of the pouch wherein it keeps its young ones; many think this pouch to be the Uterus *Amoen Acad.* and *Mus. Reg.* That which we caught, was a male. Its *penis* was big between the hind legs, round and naked, but cloven like the foot of a

cow and of the same shape. The *testicles* were situated under the belly before the *penis*, which was turned backwards.

IV. 171. PISCIPULA (PISCIDIA) Erythrina. Sp. Pl. 707. n. 3. 2. 993. 1. *Barbasco* vulgo.

The figure of the flower shews that it is not a species of the *Erythrina*, but rather a distinct genus.

En descriptionem!

*Arbor* magna s. mediocris.

*Caulis* arborescens, 9, 10, 15 orgyrum altitudine, trunco inaequali, superne in ramos adscendentes, rariusculos diviso: *ramis* erectis, alternis, teretibus, glabris.

*Folia* alterna, ad summitates ramorum pinnata.

*Flores* in racemis alternis, erectis, copiosis, digitalibus et ultra, sparsis. *Racemi* compositi *racemulis* sparsis, alternis, lateralibus, patentibus. Singulis 1, 2 *flores* suboppositos sparsaque pedunculatos proferentibus. *Pedunculis* 4, 5 linearum longitudine, simplicibus, patenti-erectis, singulis unifloris.

CAL. *Perianthium* monophyllum, tubulatum, leviter compressum, basi glabriusculum, duarum vel trium linearum longitudine et fere simile diametro fursum ad inferiora, quinquedentatum: dentibus superioribus binis, magis approximatis, obtusioribus; minoribus

minoribus lateralibus, majoribus obtuse rotundatis, infimo leviter majori, subacuminato; glabrum, persistens.

COR. papilionacea, mediocris, rotundata. *Vexillum* adscendens, patens; Ungue brevi, tereti, convexo; Lamina subrotunda, obtusa, apice emarginata, dorso subcarinata, lateribus modice retrorsum convexis. *Alae* vexillo fere paulo longiores, Unguibus linearibus, tenuissimis, calyce paulo longioribus, rectis, Laminis oblongis, sursum curvis, convexis, tumidis, angulo postico acuto, sinu interjecto obtusissimo rotundato, adnato carinae. *Carina* basi ultra medium bifida, unguibus linearibus, longitudine unguium alarum, sursum curva, inferius carinata, lateribus versus basin tumida, sursum compressa, acuta, bifida, apice, angulis baseos acutis, sinu rotundiore.

STAM. *Filamenta* decem, connata in vaginam; vagina compressa, striata, apice adscendens, fissa, fetacea; alterna breviora. *Antherae* oblongae, incumbentes.

PIST. *Germen* breve, pedicellatum, lineare, compressum, longitudine vaginae. *Stylus* adscendens, filiformis. *Stigma* acutum, simplex, ante florescentiam subcapitatum.

PER. *Legumen* pendulum, lineare, quatuor-

scutis longitudinalibus, membranaceis, exstantibus notatum, uniloculare, articulatum, membranis transversim striatulis, subplicatis.

SEM. tereti-linearia, 2. 3. 4. longitudinaliter disposita.

A small snake, which was caught in the house.

172. COLUBER scutis abdominalibus 190, squamis caudalibus 70-80; longitudo duarum spithamarum, tenuis, colore cinerascente, glaber. *Dorsum* totum maculis inaequalibus fuscis, marginibus nigris. *Caput* ovatum, in specimine valde contusum, scutis duobus magnis inter oculos. *Cauda* quoque valde erat contusa. (Forte *Coluber annulatus*.)

173. RANA arborea pedibus fissis, palmis tetradactylis rotundis, plantis pentadactylis: geniculis tuberosis. *Amoenit. Ac. p. 285. 9.* Magnitudo et facies Ranarum fontalium aquae frigidae in Europa.

*Caput* subtriangulare, obtusifusculum, planiusculo convexum; *orbitis* oculorum elevationibus tumque protuberantibus.

*Oculi* rotundi (nec parvi, inferius membrana obnictitante, pro lubitu animalis) co-operiuntur iride aurea nitente; *pupilla* majuscula nigra.

*Aures* foramina rotunda, magna, pone oculos e pau-

se paulo infra, obiecta membrana tenuissima.

*Narium* foramina parva, punctorum instar, 277

versus apicem rostri.

*Truncus* oblongus, subtumens. *Dorsum* planiusculo-convexum, in medio tumidiusculum ut et latere utroque ad dorsum, versus latera linea laterali elevatiore notatum utrinque, et ad latera linea alia magis interrupta, cum verrucis mollibus, linearibus aliquot juxta ventrem parvis, minimis.

*Palmi* tetradactyli, fissi, circumferentia rotundi, digitis introsum vergentibus, omnibus obtusis, 1 et 3 paulo longioribus, 2 et 4 minoribus, subaequalibus, subtus tuberculis ad carpos et genicula notatis.

*Plantae* longae, fissae, pentadactylae, obtusae, digito 1 minore reliquis, usque 4 sensim longioribus: 4 longitudine tertii, geniculis subtus tuberculis laevibus notatis.

*Color*: dorsi viridis, lateribus cinereo-fordidis maculis fuscis sparvis, paucis, pone in clunibus variegatis colore viridi-cinereo, maculis variegatis fuscis: Genicula pedum subtus albidiuscula. *Abdomen* albidum.

XVI. 174. EPIDENDRUM acaule, radice bulboso-ovata, floribus fuscis, nectario albo-caerulecente cordato.

XIX. 175. BIDENS procumbens, foliis inferioribus alternis oblongis undulatis incanis, super-

superioribus oppositis, floribus oppositis  
sessilibus pallide purpureis 200.

176. STAEHELINOIDES foliis ovatis fer-  
ratis incanis, floribus sessilibus. Petala  
Marrubii facie 201. 103.

177. SPONDIAS *lutea* optime floret. HOB0  
*vulgo.*

CAL. quinquedentatus, minimus.

COR. petala reflexa.

*Nectaria* decem intra stamina.

STAM. decem.

PIST. 4-5, erecta, longiuscula, approximata.

178. CHRYSOPHYLLO fructu adfinis, fo-  
liis pungentibus; vulgo *Barbasco.*

PER. *Bacca* subrotunda, uvae minoris magni-  
tudine foras striatula, acuminata; acumine  
rigido, cortice ipso secedente a pulpa s. se-  
mine globofo, in superficie notato rudimen-  
tis 3-4 hoc tempore vacuis, mollibus. Sub-  
stantia pulpae h. t. mollis, butyracea.

278 179. CHRYSOPHYLLUM alterum, foliis  
obtusis, fere congener priori.

*Fructus* globosus, acuminatus, Ribesiorum ru-  
brorum magnitudine, ruber. *Semen* ma-  
gnum, globosum, firmum; an ideo distin-  
cta Genera?

180. BOMBAX caule subspinoso, parum ven-  
tricofo trunco, nec alta arbor, h. t. priva-  
ta foliis et flore, fructus vero habuit copio-  
fos,

fos. *Capsula* oblonga, pentagona, turbina-  
 nata obtusa, quinquelocularis, quinque-  
 valvis, ad angulos dehiscens, dissepimentis  
 ad Columnam cohaerentibus quinque. *Se-  
 mina* plura, subrotunda, lana tenuissima  
 fat copiosa, subfusca, pallida. *Valvulae*  
 apertae, patentissimae, stelliformes et pla-  
 nae. *Calyx* in fructum basi excipit capsu-  
 lam integerrimam, lineae longitudine.

XX. 181. EPIDENDRUM acaule, radice bul-  
 bofo-ovata; floribus cinereo fuscis etc.

*Radix* subbulbosa vel caulis ovatus, leviter  
 rugosus, emittens radículas repentes super  
 ramos, more congenerum.

*Caulis* brevis vel fere nullus, basi ovatus.

*Folia* duo, oblonga, dorso carinata.

*Scapus* erectus, dodrantalis, pedalis, teres.

*Flores* 3-4, terminales, alterni.

XXVI. 182. HERMESIAS a me dictum,  
 vulgo Rosa de monte. (BROWNAEA coc-  
 cineae.)

*Flores* sessiles, capitati: capitula ante explica-  
 tionem ob bracteas conum pini sed mollem  
 referunt, juxta basin ipsius folij adnata,  
 subrotunda, post explicationem fasciculata,  
 alterna, sessilia. *Bracteae* alternae, colora-  
 tae, convexae, oblongae, exteriores infe-  
 rius subrotundae, concavae, membranaceae,  
 obtusae, laxiusculae, singulae includunt

fin-

singulos flores, ultimis exceptis subrotundis, quae includunt reliquas bracteas interiores, angustas, lineares. Omnes caducae sunt.

CAL. *Perianthium* duplex. *Inferius* monophyllum, tubulato-turbinatum, superne latus, laxum, ad  $\frac{1}{4}$  part. bifidum: laciniis ovatis, erectis, concavis. *Superius* interiusque tubo, spatio  $\frac{1}{2}$  calycis exterioris, sursum latiore, paulo compresso, postea quinquephyllo: foliolis oblongis, tertiam partem Calycis exterioris longitudine excedentibus, obtusis, coloratis: Foliolo superiore paulo latiore reliquis et obtusiore.

279

COR. *Petala* quinque, erecta, calyce interiore duplo longiora, oblonga, basi media sua parte inferne unguiculata: unguibus teretibus. *Lamina* oblonga, erecta, obsolete subundulata, supremum intra fissuram vaginae staminum.

STAM. *Filamenta* undecim (quod constans et curiosum) connata in vaginam ad latus superius, usque ad basin corollae (et calycis interioris) dehiscentem et divisam; altitudine calycis interioris, connata, demum soluta, subulata, alterna leviter longiora, subcurva. *Antherae* oblongae, incumbentes.

PIST. *Germen* teretiuseculum, oblongum, inferne

ferne pedicellatum; pedicello adnato lateri inferiori tubi calycis interioris, vel si mavis tubo staminum, infra calycem interiorem, pubescens. *Stylus* filiformis, staminum longitudine. *Stigma* obtusum, simplex, nigrum.

*Color* Corollae coccineus et roseo-coccineus. Fructum non vidi.

183. ERYTHRINA foliis ternatis, caule aculeato. *Sp. Plant.* 706. 2. ni fallor; ANAUCO *vulgo.*

*Flores* racemosi, subsecundi, conferti, 2, 3, 4, ex uno puncto: *racemis* digitalibus, spithamalibus. *Pedunculi* horizontales, trium vel quatuor linearum longitudine, teretes, unilaterales. *Flores* nutantes. *Bracteas* non vidi, nescio itaque an adsint.

*CAL. Perianthium* monophyllum, brevissimum, turbinatum: ore integerrimo, obtuso; truncato, inferius producto in appendicem dorsum versum, obtusum, teretiuseulum.

*COR.* papilionacea, irregularis. *Vexillum* oblongo-acuminatum, ascendens, dorso acute carinatum, marginibus leviter reflexis.

*Alae* duae, brevissimae, subrotundae, vix calycis duplae longitudinis, adpressae. *Carina* falcata, aperta, apice bifida laciniis ovatis, obtusis, compressa, marginibus superioribus,

terioribus conniventibus, vexillo quinque  
brevior.

288 STAM. *Filamenta* decem, diadelpa, superius  
solutum et novem connata in vaginam us-  
que ad apicem Carinae, qua includuntur,  
postea soluta, carina longiora, subulata al-  
terna leviter longiora, paulo curva. *An-  
therae* lineares, incumbentes.

PIST. *Germen* lineare, teres, Carinae longitu-  
dine, basi ad  $\frac{1}{3}$  pedicellatum, compressum.  
*Stylus* brevis, leviter ascendens, teres.  
*Stigma* obtusum, simplex, oblongum.

PER. *Legumen* ni fallor, lineare, teretiuscu-  
lum, ad semina oblongum.

*Color* Floris aurantius vel luteo-rufus.

Reliqua non vidi.

XXVII. Maundy Thursday. Two Indians with  
bows and arrows accompanied me, as a  
safeguard all the day, where-ever I went,  
without losing sight of me.

V. April. I this day left St. *Bernhardino*. It  
was rather hard for me to leave a place  
where I had spent two months in agreeable  
company.

On the road from St. *Bernhardino* to *Pilar* I  
met with :

184. ARBOR floribus albis copiosis, germine  
hirsuto: novi generis ni fallor; but I lost  
its description.

PLANTAE AMERICANAE. 399

185. AMARYLLIS spatha uniflora flore albo.

I lost both the flower and its description.

186. BIGNONIA *Leucoxylon* arborea, floribus luteis h. t. sine foliis; *Floribus* copiose tecta. *Folia* digitata, petiolata.

VI. Towards St. Miguel and St. Francisco.

187. ARBOR foliis pinnatis oppositis, floribus spicatis luteis diadelphis.

188. BROMELIA parasitica *Maraguaray*, in exsuccis arboribus, *Floribus* spinosis, *racemo* copioso longo, *fructibus* parvis, duris.

VII. I viewed the plants about the village, and found:

189. BAUHINIA aculeata, *florens*.

190. MIMOSA aculeata, bracteis magnis, *florens*.

191. BIHAI onoto, copiose, sylvestris, ad viam versus Flumen.

In the marsh itself I found:

192. AESCHYNOMENE frutescens, foliis pinnatis.

193. PLANTA Beccabungae similis, in aqua paludosa natans, caulis ex axillis radículas emittens, cum tuberibus oblongis, spongiosis, albis, copiosis, sessilibus, axillaribus. Flores non vidi.

194. HYDROCOTYLE foliis reniformibus, margine lobato. *Umbellulae* 3, 4, 5, floribus.

195. SAL-

195. SALVINIA *Michelli* (MARSILEA *natans*) copiose,

*Folia* punctis obtusis, erectis, quadratis, longioribus undique leguntur. They are like velvet.

196. PISTIA planta natans, facie Plantaginis, foliis subrotundis, omnibus radicalibus hirsutis, rosae in modum patentibus, absque flore.

197. UTRICULARIA radicibus nutantibus absque utriculis, nectario conico. Adeo exacte refert Utriculariam Europae nectario conico, ut dubitarem an distincta esset, Radices tamen s. folia natantia, late in ramulos sparsa, omnino carent utriculis.

*Radices* repentes, natantes, fibris copiosis, confertis, omnino absque vesiculis. An folia potius dicendae.

*Scapi* erecti hinc inde, pauci ex axillis. *Radices* ramificationes digitales et spithamales, simplices.

*Flores* alterni, sparsi, 6-12. erecti, pedunculati: *pedunculi* teretes, sub florescentia erecti, postea nutantes, 3-4 linearum longitudine. *Braeae* obtusae, parvae, glabrae, convexae, basi involventes pedunculum.

CAL. *Perianthium* diphyllum: *foliis* oblongis aequalibus, convexis, basi persistens.

COR.

PLANTAE AMERICANAÆ. 401

COR. irregularis, ringens, monopetala. *Tubus* nullus. *Lab. superius* erectum, subrotundum, inferiore dimidio brevius, basi perforatum pro germine. *Lab. inferius* patens, subrotundum, superiore duplo majus, basi faucis palato prominente, biventricoso, apice leviter emarginato, subtus terminatum in nectario, sub labio flexo.

*Nectarium* subulatum, longitudine labii inferioris, conicum, paulo depresso, adpressum labio inferiori.

STAM. *Filamenta* duo, introrsum incurva, 282  
brevia.

PER. *Capsula* subrotunda.

*Color* floris luteus, magnitudo et facies *Utriculariæ* majoris Europeæ.

Videtur procul dubio esse *Linaria palustris foeniculi folio Plumieri* s. *Utricularia* caule folioso Spec. Pl. 18. 7.

Near the river *Guere* I met with :

198. ARUNDO arborefcens.

199. AMBROSIA copiosa.

200. BIDENS procumbens, foliis inferioribus alternis oblongis undulatis tomentoso-incanis ; superioribus oppositis, floribus oppositis purpureis 175.

Variat etiam flore albo.

201. STAEHELINOIDES (JUSSIÆA)

VOL. II.

D d

*pubescens*

402 PLANTAE AMERICANAE.

pubescens foliis ovatis ferratis, floribus sessilibus oppositis 176.

202. PLANTA Didynamiae. Angiosperma parva, foliolis oblongis glabris, caule ramoso, flore purpureo.

203. SCIRPUS *minimus*.

204. GRAMEN Eragrostis parvum.

VIII. 205. JUSSLÆA foliis oblongis, caule pubescente; floribus decandris, pentapetalis.

206. BROMELIA Ananas.

207. MELOCHIA frutescens, foliis albis.

208. CANNA - - - filiquae pedales.

X. Round the marsh I met with;

209. VIOLA *Hybanthus* arborescens s. frutescens americana, foliis oblongis, obtulis, glabris.

*Radix* frutescens.

*Caulis* frutescens, per arbores scandens, inferius contortus retortusque, crassitie brachii infantis, cortice ruguloso, fibroso, contortite flexo, superius retorto, varieque inter ramos alterius arboris inflexo, summis ramulis subpendulis, filiformibus, lignosis, cortice tectis rudiore, cinerascenti-fusco, nudis ramulis hinc inde sparsis, brevibus, foliosis, varie flexis.

*Folia* alterna, ad extremitates ramulorum lateralium

ralium conferta, oblonga vel oblongo-lanceolata, superius communiter latiora, obtusa; integerrima, glabra utrinque 2, 3, 4, uncialia. *Petioli* breves; subtus teretes, supra planiusculi.

*Flores* axillares, ex alis folioque solitarii, penduli, *peduncalis* 2-3 punctatis, filiformibus, simplicibus, unifloris.

**CAL.** *Perianthium* pentaphyllum, erectum: foliis ovato-acutis, corollae adpressis, subaequalibus, ad Nectarium duobus patentioribus, foliolo opposito Nectario ab altero latere reliquis paulo minore.

**COR.** pentapetala, irregularis. α) *Petala* duo a latere Nectario opposito, calyce duplo longiora, subrotunda, obtusa. β) *Petala* duo *lateralia* subrotunda, praecedentibus triplo majora, patula, obtusa. γ) *Petalum* *posterius* subrotundo-oblongum, pone elongatum in nectarium altitudine petalorum β. *Nectarium* ex petalo ultimo, pone prominens, corolla duplo longius, subulatum, semiuunciale, compressum, rectum, oblique contortum, obtusum.

**STAM.** *Filamenta* quinque, brevissima. *Androthecae* subrotundae, connatae, apice membranula connivente terminatae, intus bilobulares, bifariam dehiscentes: duabus ver-

sus nectarium emittentibus caudam, in cavitate nectarii, pubescenti-pilosam.

PIST. *Germen* subovatum, trigonum, sextriatum. *Stylus* filiformis, staminibus longior, superne planus, obtusus, convolutus. *Stigma* obtusum, simplex.

PER. *Capsula* globosa sexsulcata, obsolete trigona, unilocularis, trivalvis.

SEM. duodecim circiter, oblonga, compressa, obtusa.

*Color* Corollae pallide luteus. Folia viridi-lutca.

APPEN-

APPENDIX ULTIMA,

305

ABSOLUTO OPERE MISSA.

TRIANDRIA.

CORAZON.

CAL. *Perianthium* monophyllum, tubulatum, obsolete 4-angulare, quadridentatum, dentibus subrotunde obtusis, persistens.

COR. nulla.

STAM. *Filam.* 3, setacea, calyce duplo longiora, receptaculo inserta, apice patula. *Antherae* subrotundae.

PIST. *Germen* ovatum, altero latere magis planiusculum, *Stylus* setaceus, longitudine staminum, ad unum latus flexus. *Stigma* simplex, acutum.

PER. nullum. *Calyx* dentibus conniventibus, in finu fert semen.

SEM. unicum, subrotundum, compressum, convexum.

CALLISIA *repens*.

CAL. *Perianth.* triphyllum, erectum: foliolis linearibus, dorso carinatis, persistentibus, marcescentibus.

COR. *Petala* tria, linearia, acuta, membranacea, calycis longitudine, erecta, apice patula.

D d 3

STAM.

STAM. *Filamenta* tria, capillaria, corolla duplo longiora, erecta. *Antherae* subrotundae.

PIST. *Germen* oblongum, compressum. *Stylus* capillaris, staminibus brevior. *Stigma* trifidum, patens.

PER. *Capsula* oblonga, compressa, acuminata, utrinque sulco impresso, bilocularis, bivalvis; valvulis dissepimento oppositis.

SEM. nonnulla, subrotunda.

Licet stigma trifidum sit, nunquam tamen capsulam 3-locularem vidi.

Planta debilis, subprocumbens, annua, digitalispathamalis, glabra, simplex, interdum e basi ramosa. *Folia* ovata vel ovato-lanceolata, basi cordata, sessilia, in superiore caule sterili imbricata in rosulam patentem, alias in fructificantibus alterna, remota, basi vaginantia, integra, striata. *Flores* pauci 2-6, sessiles, ex axillis foliorum conferti, bracteo-  
 306  
 lis seu spathulis lineari-acutis distincti, hinc habitus fere Commelinae, cui adfines genus est, sed nectario omnino caret. Corollae color aqueus, membranaceus.

*Habitat* in udis depressis, sub fruticibus ubique circa Barcellonam novam.

## PENTANDRIA.

MENAIIS *topiaria*.

CAL. *Perianth*. triphyllum, laxum; foliolis lineari-acutis,

acutis, striatis, concavis, erecto-patulis, persistentibus.

COR. monopetala, hypocrateriformis. *Tubus* cylindricus, calyce longior. *Limbus* patens, 5-partitus, laciniis oblongis.

STAM. *Filamenta* nulla. *Antherae* 5, lineares acutae, sessiles, adnatae summae tubi fauci e regione incisurarum limbi.

PIST. *Germen* subrotundum, depressum. *Stylus* filiformis, erectus, tubi altitudine. *Stigmata* duo, subconniventia, oblonga, acuta.

PER. *Bacca*.

EDECHIA ad Curataquiche. *Laugieria odorata*.

CAL. *Perianth*. monophyllum, tubulatum, teres, ore integro persistens.

COR. monopetala, hypocrateriformis. *Tubus* calyce multo longior, cylindricus. *Limbus* 5-partitus: laciniis oblongis, patentissimis.

STAM. *Filamenta* 5, brevissima, supra medium tubi adnata, capillaria. *Antherae* lineares, tubi altitudine.

PIST. *Germen* subrotundum, receptaculis cinctum. *Stylus* filiformis, staminibus altior. *Stigma* capitatum, subrotundum.

PER. *Drupa* subrotunda, parva.

SEM. *Nux* subrotunda, ossea, 4-5 locularis (in altera specie 2-loc. irregularis) nucleis teretibus.

1. sp. inermis p. 271.

2. sp.

2. sp. spinosa p. 259.

## CELOSIOIDES.

CAL. *Perianth.* pentaphyllum, patens: foliolis lanceolatis, concavis, ficcis, persistens.

307 COR. nulla.

*Nectarium* germen cingens, membranaceum, margine stamina gerens, integrum, nec plicatum, nec inter stamina altius.

STAM. *Filamenta* quinque, inserta membranæ nectarii, patula, calyce breviora. *Antherae* subrotundae.

PIST. *Germen* subrotundum, obtusum, compressum. *Stylus* filiformis, apice bifidus, staminum longitudine. *Stigmata* simplicia, crassiuscula.

PER. *Capsula* oblonga, compressa, calyce duplo triplove longior, unilocularis, versus basin horizontaliter dehiscens.

SEM. unicum, oblongum, compressum, glabrum, nitidum, involutum arillo spongioso, albo, versus solem micis argenteis splendido.

Ideoque a *Celosia* semine unico, capsulaque magna, et ad *Achyranthe* feminis arillo differt.

1. *Celosioides frutescens scandens.*

## HEXANDRIA.

HERMUPOA fl. coccineo. *Mattique cique.*

CAL. *Perianthium* duplex: *Exterius* monophyllum,

lum, tubulatum, longum, integrum, apice diruptum 3 dentibus; inferius longius, dehiscens, coloratum, deciduum; *Interius* minimum, tetraphyllum: foliolis subquadrangularibus, truncatis, ad interstitia petalorum deciduum.

COR. *Petala* quatuor, erecta linearia, convexa, calyce exteriori leviter longiora, obtuse acuminata.

STAM. *Filamenta* sex, longissima, subulata, *Antherae* oblongae, planae, curvae.

PIST. *Germen* subulatum, parvum. *Stylus* filiformis, staminibus paulo brevior. *Stigma* parvum, globosum, capitatum.

PER. *Bacca* maxima, teres, oblongo-cylindracea, superficie hinc inde crassiore.

SEM. plurima subrotunda, nidulantia.

Affinitate naturali jungitur *Breyniae*, reliquifque, hinc dixi calycem interiorem, quod alii dicerent nectarium.

## HEPTANDRIA.

PISONIA *mitis*.

CAL. *Perianth.* monophyllum, subulatum, superne latius, 5-angulare, obsolete 5-dentatum, minimum.

COR. nulla.

STAM. *Filamenta* septem, subulata, erecta, basi fere connata, receptaculo inserta. *Antherae* subro-

subrotundae, didymae, calycis dimidii altitudine.

**PIST.** *Germen* oblongum, utrinque contractum, in fundo calycis. *Stylus* filiformis, calyce altior, ad latus inferius inclinatus, apice sursum curvo s. ascendente. *Stigma* multifidum, lacerum, penicilliforme.

**PER.** - - -

**SEM.** - - -

- A *Pisonia* differt staminibus brevibus; stigmatibus et sexu hermaphrodito.

### OCTANDRIA.

**COMBRETUM.** *laxum.*

Frutex fol. oppositis, fr. 4-gono, membranaceo, monospermo. *Ado* vulgo.

**CAL.** *Perianth.* monophyllum, germini insidens, campanulatum, quadridentatum, denticulis brevibus, lato acutis; deciduum.

**COR.** *Petala* quatuor, parva, ovato-acuta, ex incisuris calycis, vix dentibus longiora.

**STAM.** *Filamenta* octo, longissima, fetacea, erecta. *Antherae* suboblongae, parvae.

**PIST.** *Germen* sub receptaculo, lineare, quadrangulare, angulis compressis, superne acuminatum. *Stylus* fetaceus, longitudine staminum, ad basin hirsutus. *Stigma* simplex, acutum.

**PER.** nullum nisi crustam feminis tetragonam velis.

**SEM.**

SEM. unicum, oblongum, nudum, tetragonum ;  
 angulis longitudinalibus membranaceis ma-  
 gis, apice acuminatum ; medio oblongo 4-  
 gono, angulis compressis, Cotyledonibus cor-  
 rugatis, corculo ex apice.

Hinc flos fere *Grisleae*, sed germen sub recep-  
 taculo, Stamina erecta, et fructus abunde  
 distinguunt.

## DECANDRIA.

309

CASSIAE *adfinis*.

CAL. *Perianth*. 5-phyllum : foliis lineari-oblon-  
 gis, acutis, patentibus, deciduis.

COR. *Petala* quinque, patentia, erecta, subrotun-  
 da, subaequalia, calyce majora.

STAM. *Filamenta* 10, brevissima. *Antherae* lineares,  
 curvae, subaequales, omnes fertiles.

PIST. *Germen* lineare, unicum. *Stylus* ascendens  
 subulatus.

Vix, exceptis staminibus omnibus fertilibus, a  
*Cassia* differt.

11. April. I travelled to *Piritu*, and found upon  
 the road ;

MAHOMA arbor diadelpa, floribus spicatis  
 racemosis copiosis, pallide purpurascen-  
 tibus.

JATROPHA frutescens, altior lignosa, caule  
 glabro, folia digitato-palmata, lobis extror-  
 sum latioribus, in medio sinu lato contractis.

*Flores*

*Flores* in racemo lato fusci. *Stamina* 10, filamentis  
omnibus distinctis; quorum 5 interiora,  
breviora, recta, leviter patula, 5 vero exte-  
riora, basi retrorsum inflexa, longiora.

*Corolla* campanulata, basi laxa, pallide fusca, co-  
lore interiore saturatiore.

MIMOSA cortice glaberrimo.

HIBISCUS flore albo, calyce patente.

BREYNIA *olivacea latifolia*, copiose florens.

COFER Indis Pirituensibus vocata, frutex altior,  
fol. oblongis. SYMPLOCOS *martinicensis*.

CAL. *Perianth.* tubulatum, latere altero ad basin  
dehiscens, hinc paulo obliquum, apice com-  
pressum, 2-dentatum.

COR. *Petala* 4, erecta, oblonga, obtusa, basi an-  
gustiora, concava, convexa, basi convexe  
patula, sursum erecta.

STAM. *Filamenta* 20, in 4 fasciculos s. phalanges  
divisa, inde 5 et 5 parallela, opposita, corolla  
paulo breviora.

PIST. *Germen* oblong. . . . *Stylus* unicus.

310 *Color* floris candidus et pulchre albus.

GOSSYPIUM versus mare.

12. April. I went from *Piritu* to *S. Miguel* and  
*S. Francisco*. They bring about this time  
great quantities of salt towards *Barcelona*  
and *Caracas*.

14. April. We travelled towards the river *Orinoco*.  
We waded through the river *Guere* on our

way,

way, and went a good way along its sandy shores, till we reached a marsh and soon after S. Pablo, after two miles journey.

HELENII facie fl. luteo, foliis 2-pinnatis.

We continued our journey towards *S. Lorenzo* which lies north of the river *Guere*, so that we passed twice that river.

The journey went on towards *Margarita*, thirteen miles, which lies south of the river *Guere*, which we passed a third time.

15 April from *Margarita* to *Aragua* seven miles.

Planta syngenesiae fl. albo, spicato, rigida.

16. April. The journey continued from *Aragua* to *Hato Nuovo* eight miles.

17. April Planta lacustris f. palustris spinosa.

Radix perennis, fibrosa, tenax.

Caules solitarii f. pauci, erecti, pedales, subsimplices, pubescentes, subsessiles, ramulis alternis, patulis, brevibus simplicibus.

Folia alterna, lanceolata, semiuncialia, sessilia, pubescenti-viscosa, margine subundulata. Spinnae axillares, subulatae, rectae, patentae, 2-3 lin. longitudine.

Flores pauci, terminales ramis alternis, conferti, subsessiles.

CAL. Perianth. 5-phylum; foliolis linearibus, acutis, erectis, pubescenti-viscosis, non imbricatis.

COR.

COR. monopetala, rotato-campanulata. *Tubus* laxior, calycis dimidii longitudine, obsolete quinquangularis. *Limbus* erecto-patens, 5-partitus: laciniis ovatis, imbricatis.

311 STAM. *Filamenta* 5, subulata, corolla paulo altiora, patentia, apice inflexa, basi crassiora, cordata. *Antherae* parvae, oblongae, curvae, incumbentes.

PIST. *Germen* ovatum, vix manifeste compressum, lineis oppositis obsolete notatum. *Styli* 2, filiformes, long. staminum patentes, introrsum leviter curvi. *Stigmata* obtusa, truncata.

PER. *Capsula* ovata, utrinque linea notata, 2-loc. 2-valv.? *Receptaculo* fem. ovato, magno.

SEM. minutissima, plurima, juxta valvulas, imbricata, super receptac.

Color floris est saturate caeruleus.

ARBOR ad Morichal.

CAL. *Perianth.* monophyllum; tubo oblongo, fursum leviter contracto, 5-partito: laciniis oblongis, patentibus.

COR. *Petala* 5, raro 4, patentia, oblonga, concava, calycis laciniis duplo longiora, majora.

STAM. *Filamenta* 6, raro 5, declinata ex inferiore latere, margine brevissimo, circulari, calycis collo adnata, decumbentia, leviter fursum arcuata, s. subadscendentia. corolla triplo longiora,

longiora, subaequalia. *Antherae* parvae, subrotundae.

*PIST.* *Germen* oblongum, leviter compressum, hirsutum. *Stylus* setaceus, situ staminum leviter illis longior. *Stigma* simplex.

*PER.* *Capsula* oblonga, subovata, oblique acuta,, latere exteriori gibbo, superiore recto, superius ad basin sulco uno oblongo notata.

*SEM.* unicum, oblongum.

*Frutex* 2-4 orgyiarum longitudine.

*Folia* ovalia, obtusa, integerrima, subacuminata.

18. April.

*SLOANEA dentata.*

*Arbor* mediocris, vel frutex altus, juxta rivulos nascens; ramis laxis, erectis, varie et rare dispersis, longis.

*Folia* alterna, ad pices ramorum, subsessilia, oblonga, spithamalia. basi obtusa, cordata, superne rugulosa, sed concinne venulosa, subtus tomentosa, pilosa, ferrulata.

*Flores* in racemo opposito infimo folio, composito ramulis alternis, ex quorum summitate 3 l. 4 flores prodeunt, pedicellati.

*Bractee* singulo ramulo laterali binae oppositae.

*Bractee* ad pedicellos 4 v. 3 majores, patentes, ovatae.

*Pedicelli*  $\frac{1}{2}$  unciales.

*CAL.* *Perianth.* 5-phyllum, erectum, patens, rigidum, strictum; foliolis lineari-acutis marginibus

ginibus crassis, ante florem apertum contiguus,  $\frac{1}{2}$  uncial. foris pubescenti pilosis, deciduis.

**COR.** *Petala* 5, erecta, oblonge subrotunda, calycis medio leviter altiora, breviter unguiculata, ungue oblongo, fursum mox latiore, obtusiusculo.

**STAM.** *Filamenta* plurima 100-200, filiformia corolla  $\frac{1}{2}$  breviora, compacta, superius planiuscula. extima sterilia, superne foliacea, lanceolata, subhirsuta. *Antherae* oblongo-lineares, latere interiore filamentum adnatae, apice subfoliaceo, subhirsutae.

**PIST.** *Germen* subrotundum, depressum. *Stylus* filiformis, staminibus duplo longior, corolla paulo longior, apice leviter curvus. *Stigma* obtusum, perforatum, cylindri instar.

**PER.** *Bacca* subrotundo-orbiculata, depressa, palmae latitudine, undique echinata: echinis mollibus, nec adeo asperis, acutis, pilosis, interius carnosa, forte capsula.

**SEM.** plurima, subrotunda, paulo compressa, mediocria.

*Color* Corollae luteus.

**EPILOBII** vel **RHEXIAE** affinis. **MELASTOMA.**

*Radix* tuberosa, coagmentata, radiculis fibrosis.

*Caulis* erectus, herbaceus, simplex, 3-5 pedalis, hirsutus, teres.

*Folia*

*Folia* opposita, ovato-oblonga, 3 vel 7-nerviâ, hirsuta; sessilia.

*Flores* axillares 1: 2: 3: brevi ramulo elevati.

**CAL.** *Perianth.* 1-phyll. tubulato-campanulatum, 5-fidum: laciniis lanceolatis, erecto-patulis, foris hirsutis.

**COR.** *Petala* 5, subrotunda, inserta Calyci, laciniis ejus triplo majora, obtusa.

**STAM.** *Filamenta* 10, inserta calyci infra petala, filiformia, leviter dentata ad latus inferius, leviter longiora. *Antherae* lineares, compressae, subulatae basi curvae dorso gibbo, filamento margine basico bifido, corollae altitudine.

**PIST.** *Germen* ovatum, medii calycis altitudine, sub-hirsutum. *Stylus* filiformis, longitudine staminum, declinatus. *Stigma* obtusum, simplex.

**PER.** *Capsula* 5-locularis, 5-valvis?

**SEM.** plurima, minima.

*Receptaculum* semin. magnum.

*Flores* purpurei.

**BYTTNERIA** *scabra.*

*Radix* perennis, fibrosa.

*Caulis* fruticosus, erectus; 4-5 ped. altitudine:

Ramis alternis, longis angulatis; aculeis

brevibus; reflexis, cartilagineis,

*Folia* lineari-lanceolata, subintegerrima, 4-8 unc.

longit. inferiora petiolata; superiora sessilia,

**VOL. II.** E e glabra.

glabra, venosa, rigidiuscula, subconduplicata.

*Petiol* angulati, margine et dorso aculeati.

*Flores* axillares, pedicellati, et terminales in racemis oblongis, angustis. *Pedunculi* plures 2.

3. 6. 8. ex axilla foliorum vel bractearum superiorum, subdivisi in pedicellos umbellatos 1-2-4.

*CAL.* nullus, nisi corollam vis.

*COR.* *Petala* 5, lanceolata, patentia, concava, subacuta.

*Nectaria* 5 (squamae 5) subrotunda, concava, introrsum conniventia obtusa, margine conniventi filamentis adnexa terminante in sita 5, corolla fere longiora, erecto-patula.

*STAM.* *Filamenta* 5, subrotunda, submembranacea, obtusa, brevia, apice conuata cum *Nectariis*. *Antherae* subrotundae dorso filamentorum insertae.

*PIST.* *Germen* subrotundum. *Stylus* filiformis.

*PER.* *Capsula* subrotunda, depressa, 5-loba, 5-loc. 5-valvis echinata; echinis parvis; obtusiusculis brevibus.

314 *SEM.* 5, solitaria singulis loculis, oblonga.

*Color* Floris albus: *Nectaria* apicibus fuscis.

*JUSSIAEAE* adfinis herbacea octandra, capsulis apice se aperientibus. *Juxta* rivulorum praecipitia.

*Folia*

*Folia* alterna, oblonga, levissime ferrulata, glabra, venosa, obtusa, sessilia, uncialia.

*Flores* axillares, solitarii, pedunculati, pedunculo unciali prius nutante, dein erecto.

*Bracteolae* brevissimae, acutae, oppositae, binae ad basin calycis.

**CAL.** *Perianthium* 4-phyllum, infidens germini illudque coronans: foliis ovato-lanceolatis, acutis, persistentibus, demum fere deciduis.

**COR.** *Petala* 4, patentia, obverse reniformia, 2-plo latiora quam longiora, apice emarginata, obtusa, calyce sesqui longiora.

**STAM.** *Filamenta* 8, filiformia, calyce breviora, sinistrorsum leviter torta, crassiuscula, erecta. *Antherae* oblongae subulatae, tortae, fursum tenuiores.

**PIST.** *Germen* sub receptaculo, turbinatum, oblongum, obsolete 4-gonum, intra calycem, apice subovato, obtuso, lineis fursum deorsumque repente. *Stylus* brevissimus, tertiusculus. *Stigma* capitatum, subrotundum, majusculum, glutinosum.

**PER.** *Capsula* 4-ocularis, apice integro, 4-valvis; columellis persistentibus.

**SEM.** plurima, minutissima.

Flos luteus.

BEJUCO pendulus, floribus paniculatis. HIP.

POCRATEA volubilis.
